SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE

Notice

While reasonable efforts have been made to assure the accuracy of this document, Telit assumes no liability resulting from any inaccuracies or omissions in this document, or from use of the information obtained herein. The information in this document has been carefully checked and is believed to be entirely reliable. However, no responsibility is assumed for inaccuracies or omissions. Telit reserves the right to make changes to any products described herein and reserves the right to revise this document and to make changes from time to time in content hereof with no obligation to notify any person of revisions or changes. Telit does not assume any liability arising out of the application or use of any product, software, or circuit described herein; neither does it convey license under its patent rights or the rights of others.

It is possible that this publication may contain references to, or information about Telit products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that Telit intends to announce such Telit products, programming, or services in your country.

Copyrights

This instruction manual and the Telit products described in this instruction manual may be, include or describe copyrighted Telit material, such as computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and its licensors certain exclusive rights for copyrighted material, including the exclusive right to copy, reproduce in any form, distribute and make derivative works of the copyrighted material. Accordingly, any copyrighted material of Telit and its licensors contained herein or in the Telit products described in this instruction manual may not be copied, reproduced, distributed, merged or modified in any manner without the express written permission of Telit. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit, as arises by operation of law in the sale of a product.

Computer Software Copyrights

The Telit and 3rd Party supplied Software (SW) products described in this instruction manual may include copyrighted Telit and other 3rd Party supplied computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and other 3rd Party supplied SW certain exclusive rights for copyrighted computer programs, including the exclusive right to copy or reproduce in any form the copyrighted computer program. Accordingly, any copyrighted Telit or other 3rd Party supplied SW computer programs contained in the Telit products described in this instruction manual may not be copied (reverse engineered) or reproduced in any manner without the express written permission of Telit or the 3rd Party SW supplier. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit or other 3rd Party supplied SW, except for the normal non-exclusive, royalty free license to use that arises by operation of law in the sale of a product.

Usage and Disclosure Restrictions

License Agreements

The software described in this document is the property of Telit and its licensors. It is furnished by express license agreement only and may be used only in accordance with the terms of such an agreement.

Copyrighted Materials

Software and documentation are copyrighted materials. Making unauthorized copies is prohibited by law. No part of the software or documentation may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means, without prior written permission of Telit

High Risk Materials

Components, units, or third-party products used in the product described herein are NOT fault-tolerant and are NOT designed, manufactured, or intended for use as on-line control equipment in the following hazardous environments requiring fail-safe controls: the operation of Nuclear Facilities, Aircraft Navigation or Aircraft Communication Systems, Air Traffic Control, Life Support, or Weapons Systems (High Risk Activities"). Telit and its supplier(s) specifically disclaim any expressed or implied warranty of fitness for such High Risk Activities.

Trademarks

TELIT and the Stylized T Logo are registered in Trademark Office. All other product or service names are the property of their respective owners.

1. Introduction

1.1. Scope

This document is aimed in providing an detailed specification and a comprehensive listing as a reference for the whole set of AT command

1.2. Audience

Readers of this document should be familiar with Telit modules and their ease of controlling by means of AT Commands.

1.3. Contact Information, Support

For general contact, technical support, to report documentation errors and to order manuals, contact Telit Technical Support Center (TTSC) at:

TS-EMEA@telit.com
TS-NORTHAMERICA@telit.com
TS-LATINAMERICA@telit.com
TS-APAC@telit.com

Alternatively, use:
http://www.telit.com/en/products/technical-support-center/contact.php
For detailed information about where you can buy the Telit modules or for recommendations on accessories and components visit:
http://www.telit.com
To register for product news and announcements or for product questions contact Telit Technical Support Center (TTSC).
Our aim is to make this guide as helpful as possible. Keep us informed of your comments and suggestions for improvements.
Telit appreciates feedback from the users of our information.

1.4. Document Organization

This document contains the following chapters:

Chapter 1: "Introduction" provides a scope for this document, target audience, contact and support information, and text conventions.

Chapter 2: "Overview" about the aim of this document and implementation suggestions.

Chapter 3: "AT Commands" The core of this reference guide.

1.5. Text Conventions

Danger – This information MUST be followed or catastrophic equipment failure or bodily injury may occur.

Caution or Warning – Alerts the user to important points about integrating the module, if these points are not followed, the module and end user equipment may fail or malfunction.

Tip or Information – Provides advice and suggestions that may be useful when integrating the module.

All dates are in ISO 8601 format, i.e. YYYY-MM-DD.

2. Overview

2.1. About the document

This document is to describe all AT commands implemented on the Telit wireless modules listed on the Applicabilty Table.

NOTE:

Telit suggests all the system developers to use always the newer AT Commands Interface Style defined by AT#SELINT=2; and in case you are starting a new design we highly recommend you to use the newer AT Commands Interface Style defined by AT#SELINT=2 which gives you a possibility to include all Telit's new features and also all future implementations.

Moreover, Telit suggests to use the following settings to get the performance most customers are looking for:

AT#SMSMODE=1
AT#REGMODE=1

3. AT COMMANDS

The Telit wireless module family can be controlled via the serial interface using the standard AT commands[1]. The Telit wireless module family is compliant with:

1. Hayes standard AT command set, in order to maintain the compatibility with existing SW programs.
2. 3GPP TS 27.007 specific AT command and GPRS specific commands.
3. 3GPP TS 27.005 specific AT commands for SMS (Short Message Service) and CBS (Cell Broadcast Service)
4. FAX Class 1 compatible commands

Moreover Telit wireless module family supports also Telit proprietary AT commands for special purposes.
The following is a description of how to use the AT commands with the Telit wireless module family.

3.1. Definitions

The following syntactical definitions apply:

<CR> **Carriage return character**, is the command line and result code terminator character, which value, in decimal ASCII between 0 and 255,is specified within parameter **S3**. The default value is 13.

<LF> **Linefeed character**, is the character recognised as line feed character. Its value, in decimal ASCII between 0 and 255, is specified within parameter **S4**. The default value is 10. The line feed character is output after carriage return character if verbose result codes are used (**V1** option used) otherwise, if numeric format result codes are used (**V0** option used) it will not appear in the result codes.

<...> Name enclosed in angle brackets is a syntactical element. They do not appear in the command line.

[...] Optional subparameter of a command or an optional part of TA information response is enclosed in square brackets. Brackets themselves do not appear in the command line. When subparameter is not given in AT commands which have a Read command, new value equals to its previous value. In AT commands which do not store the values of any of their subparameters, and so have not a Read command, which are called *action type* commands, action should be done on the basis of the recommended default setting of the subparameter.

[1] The AT is an ATTENTION command and is used as a prefix to other parameters in a string. The AT command combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.

3.2. AT Command Syntax

The syntax rules followed by Telit implementation of either Hayes AT commands, GSM commands and FAX commands are very similar to those of standard basic and extended AT commands. A special command **(#SELINT**, see §3.5.2.1.1) has been introduced in order to have an AT interface very close to the standard one.

There are two types of extended command:

- **Parameter type commands**. This type of commands may be "set" (to store a value or values for later use), "read" (to determine the current value or values stored), or "tested" (to determine ranges of values supported). Each of them has a test command (trailing **=?**) to give information about the type of its subparameters; they also have a Read command (trailing **?**) to check the current values of subparameters.

- **Action type commands**. This type of command may be "executed" or "tested".

- "executed" to invoke a particular function of the equipment, which generally involves more than the simple storage of a value for later use
- "tested" to determine:

(if the command **#SELINT=*0*** *or* **#SELINT=*1*** *has been issued, see §3.5.2.1.1)*
if subparameters are associated with the action, the ranges of subparameters values that are supported; if the command has no subparameters, issuing the correspondent Test command (trailing **=?**) raises the result code "**ERROR**".
Note: issuing the Read command (trailing **?**) causes the command to be executed.

(if the command **#SELINT=*2*** *has been issued, see §3.5.2.1.1)*
whether or not the equipment implements the Action Command (in this case issuing the correspondent Test command - trailing **=?** - returns the **OK** result code), and, if subparameters are associated with the action, the ranges of subparameters values that are supported.

Action commands don't store the values of any of their possible subparameters.

Moreover:

- *(for* **#SELINT=*0*** *or* **#SELINT=*1*** *only)*
  An enhanced test command (trailing **=??**) has been introduced to maintain backward compatibility for those commands whose subparameters changed the range of possible values from version to version.

- *(for* **#SELINT=*2*** *only)*
  The response to the Test Command (trailing **=?**) may be changed in the future by Telit to allow the description of new values/functionalities

- *(for* **#SELINT=2** *only)*
  If all the subparameters of a parameter type command **+CMD** are optional, issuing **AT+CMD=<CR>** causes the **OK** result code to be returned and the previous values of the omitted subparameters to be retained.

3.2.1. String Type Parameters

A string, either enclosed between quotes or not, is considered to be a valid string type parameter input. According to V25.ter space characters are ignored on the command line and may be used freely for formatting purposes, unless they are embedded in numeric or quoted string constants; therefore a string containing a space character has to be enclosed between quotes to be considered a valid string type parameter (e.g. typing **AT+COPS=1,0,"A1"** is the same as typing **AT+COPS=1,0,A1**; typing **AT+COPS=1,0,"A BB"** is different from typing **AT+COPS=1,0,A BB**).

When **#SELINT=0 (or 1)** mode is selected, a string not enclosed between quotes is changed in upper case (e.g. **mickey** become **MICKEY**), while a string enclosed between quotes is case sensitive.
When **#SELINT=2** mode is selected, a string is always case sensitive.

A small set of commands requires always to write the input string parameters within quotes: this is explicitly reported in the specific descriptions.

3.2.2. Command Lines

A command line is made up of three elements: the **prefix**, the **body** and the **termination character**.

The **command line prefix** consists of the characters "**AT**" or "**at**", or, to repeat the execution of the previous command line, the characters "**A/**" or "**a/**" or **AT#/** or **at#/**.
The **termination character** may be selected by a user option (parameter S3), the default being **<CR>**.
The basic structures of the command line are:

- **ATCMD1<CR>** where **AT** is the command line prefix, **CMD1** is the body of a **basic command** (nb: the name of the command never begins with the character "**+**") and **<CR>** is the command line terminator character
- **ATCMD2=10<CR>** where 10 is a subparameter
- **AT+CMD1;+CMD2=, ,10<CR>** These are two examples of **extended commands** (nb: the name of the command always begins with the character "**+**"[2]). They are delimited with semicolon. In the second command the subparameter is omitted.

[2] The set of **proprietary AT commands** differentiates from the standard one because the name of each of them begins with either "**@**", "**#**", "**$**" or "*****". **Proprietary AT commands** follow the same syntax rules as **extended commands**

- **+CMD1?<CR>** This is a Read command for checking current subparameter values
- **+CMD1=?<CR>** This is a test command for checking possible subparameter values

These commands might be performed in a single command line as shown below:

ATCMD1 CMD2=10+CMD1;+CMD2=, ,10;+CMD1?;+CMD1=?<CR>

anyway it is always preferable to separate into different command lines the basic commands and the extended commands; furthermore it is suggested to avoid placing several action commands in the same command line, because if one of them fails, then an error message is received but it is not possible to argue which one of them has failed the execution.

If command **V1** is enabled (verbose responses codes) and all commands in a command line has been performed successfully, result code **<CR><LF>OK<CR><LF>** is sent from the TA to the TE, if subparameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **<CR><LF>ERROR<CR><LF>** is sent and no subsequent commands in the command line are processed.

If command **V0** is enabled (numeric responses codes), and all commands in a command line has been performed successfully, result code **0<CR>** is sent from the TA to the TE, if sub-parameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **4<CR>** and no subsequent commands in the command line are processed.

In case of errors depending on ME operation, **ERROR** (or **4**) response may be replaced by **+CME ERROR: <err> or +CMS ERROR: <err>**.

NOTE:

The command line buffer accepts a maximum of 400 characters. If this number is exceeded none of the commands will be executed and TA returns **ERROR**.

3.2.2.1. ME Error Result Code - +CME ERROR: <err>

This is NOT a command, it is the error response to +**Cxxx 3GPP TS 27.007** commands.
Syntax: **+CME ERROR: <err>**
Parameter: **<err>** - error code can be either numeric or verbose (see **+CMEE**).The possible values of **<err>** are reported in the table:

Numeric Format	Verbose Format
General errors:	
0	phone failure
1	No connection to phone
2	phone-adaptor link reserved
3	operation not allowed
4	operation not supported
5	PH-SIM PIN required
10	SIM not inserted
11	SIM PIN required
12	SIM PUK required
13	SIM failure
14	SIM busy
15	SIM wrong
16	incorrect password
17	SIM PIN2 required
18	SIM PUK2 required
20	memory full
21	invalid index
22	not found
23	memory failure
24	text string too long
25	invalid characters in text string
26	dial string too long
27	invalid characters in dial string
30	no network service
31	network time-out
32	network not allowed - emergency calls only
40	network personalization PIN required
41	network personalization PUK required
42	network subset personalization PIN required
43	network subset personalization PUK required
44	service provider personalization PIN required
45	service provider personalization PUK required
46	corporate personalization PIN required
47	corporate personalization PUK required
General purpose error:	
100	unknown
GPRS related errors to a failure to perform an Attach:	
103	Illegal MS (#3)*
106	Illegal ME (#6)*
107	GPRS service not allowed (#7)*
111	PLMN not allowed (#11)*
112	Location area not allowed (#12)*
113	Roaming not allowed in this location area (#13)*
GPRS related errors to a failure to Activate a Context and others:	
132	service option not supported (#32)*
133	requested service option not subscribed (#33)*
134	service option temporarily out of order (#34)*
148	unspecified GPRS error
149	PDP authentication failure
150	invalid mobile class
Network survey errors: (only if command **#SELINT=*0*** or **#SELINT=*1*** has been issued - see **§3.5.2.1.1**):	

Numeric Format	Verbose Format
257	Network survey error (No Carrier)*
258	Network survey error (Busy)*
259	Network survey error (Wrong request)*
260	Network survey error (Aborted)*
IP Easy related errors (only if command **#SELINT=*0*** or **#SELINT=*1*** has been issued - see **§3.5.2.1.1**)**:**	
400	generic undocumented error
401	wrong state
402	wrong mode
403	context already activated
404	stack already active
405	activation failed
406	context not opened
407	cannot setup socket
408	cannot resolve DN
409	time-out in opening socket
410	cannot open socket
411	remote disconnected or time-out
412	connection failed
413	tx error
414	already listening
FTP related errors (only if command **#SELINT=*0*** or **#SELINT=*1*** has been issued - see **§3.5.2.1.1**)**:**	
420	ok
421	connect
422	disconnect
423	error
424	wrong state
425	can not activate
426	can not resolve name
427	can not allocate control socket
428	can not connect control socket
429	bad or no response from server
430	not connected
431	already connected
432	context down
433	no photo available
434	can not send photo
IP Easy related errors (only if command **#SELINT=*2*** has been issued - see **§3.5.2.1.1**)**:**	
550	generic undocumented error
551	wrong state
552	wrong mode
553	context already activated
554	stack already active
555	activation failed
556	context not opened
557	cannot setup socket
558	cannot resolve DN
559	timeout in opening socket
560	cannot open socket
561	remote disconnected or time-out
562	connection failed

Numeric Format	Verbose Format
563	tx error
564	already listening
566	can not resume socket
567	wrong APN
568	wrong PDP
569	service not supported
570	QOS not accepted
571	NSAPI already used
572	LLC or SNDCP failure
573	network reject
Custom SIM Lock related errors:	
586	MCL personalisation PIN required
FTP related errors (only if command **#SELINT=*2*** has been issued - see **§3.5.2.1.1**)**:**	
600	Generic undocumented error
601	wrong state
602	Can not activate
603	Can not resolve name
604	Can not allocate control socket
605	Can not connect control socket
606	Bad or no response from server
607	Not connected
608	Already connected
609	Context down
610	No photo available
611	Can not send photo
612	Resource used by other instance
613	Data socket yet opened in CmdMode
614	FTP CmdMode data socket closed
Network survey errors: (only if command **#SELINT=*2*** has been issued - see **§3.5.2.1.1**)**:**	
657	Network survey error (No Carrier)*
658	Network survey error (Busy)*
659	Network survey error (Wrong request)*
660	Network survey error (Aborted)*
SAP related errors: (only if command **#SELINT=*2*** has been issued - see **§3.5.2.1.1**)**:**	
731	Unspecified
732	Activation command is busy
733	Activation started with CMUX off
734	Activation started on invalid CMUX
736	Remote SIM already active
737	Invalid parameter
SSL related errors (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
830	SSL generic error
831	SSL cannot activate
832	SSL socket error
833	SSL not connected
834	SSL already connected
835	SSL already activated
836	SSL not activated
837	SSL certs and keys wrong or not stored

Numeric Format	Verbose Format
838	SSL error enc/dec data
839	SSL error during handshake
840	SSL disconnected
PING related errors (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
900	Generic undocumented error
901	Timeout
902	Destination unreachable
903	Can not resolve name
904	Context down
SiRFInstantFix related errors	
920	SGEE update initialization stage failed
921	SGEE file is not newer than the last stored one
922	SGEE update generic error

*(values in parentheses are GSM 04.08 cause codes)

3.2.2.2. Message Service Failure Result Code - +CMS ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.005 commands.

Syntax: **+CMS ERROR: <err>**
Parameter: **<err>** - numeric error code.

The **<err>** values are reported in the table:

Numeric Format	Meaning
0...127	GSM 04.11 Annex E-2 values
128...255	3GPP TS 23.040 sub clause 9.2.3.22 values
300	ME failure
301	SMS service of ME reserved
302	operation not allowed
303	operation not supported
304	invalid PDU mode parameter
305	invalid text mode parameter
310	SIM not inserted
311	SIM PIN required
312	PH-SIM PIN required
313	SIM failure
314	SIM busy
315	SIM wrong
316	SIM PUK required
317	SIM PIN2 required
318	SIM PUK2 required
320	memory failure

Numeric Format	Meaning
321	invalid memory index
322	memory full
330	SMSC address unknown
331	no network service
332	network time-out
500	unknown error
512	FDN not allowed number

3.2.3. Information Responses And Result Codes

The TA response, in case of verbose response format enabled, for the previous examples command line could be as shown below:

- information response to **+CMD1?**

  <CR><LF>+CMD1:2,1,10<CR><LF>

- information response to **+CMD1=?**

  <CR><LF>+CMD1(0-2),(0,1),(0-15)<CR><LF>

- final result code **<CR><LF>OK<CR><LF>**

Moreover there are other two types of result codes:

- *result code*s that inform about progress of TA operation (e.g. connection establishment **CONNECT**)
- *result code*s that indicate occurrence of an event not directly associated with issuance of a command from TE (e.g. ring indication **RING**).

Here the basic result codes according to ITU-T V25Ter recommendation

Result Codes	
Numeric form	Verbose form
0	OK
1	CONNECT or CONNECT <text>[3]
2	RING
3	NO CARRIER
4	ERROR
5	CONNECT 1200[4]
6	NO DIALTONE
7	BUSY
8	NO ANSWER

[3] For SELINT 0,1 <text> is only “300”; for SELINT 2 <text> can be”300”, “1200”, “2400”, “4800”, “9600”, “14400” or “1200/75”

[4] Valid for SELINT 0,1 only

Result Codes	
10	CONNECT 2400[4]
11	CONNECT 4800[4]
12	CONNECT 9600[4]
15	CONNECT 14400[4]
23	CONNECT 1200/75[4]

3.2.4. Command Response Time-Out

Every command issued to the Telit modules returns a result response, if response codes are enabled (default). The time needed to process the given command and return the response varies, depending on the command type. Commands that do not interact with the SIM or the network, and only involve internal setups or readings, have an immediate response. Commands that interact with the SIM or the network could take many seconds to send a response, depending on SIM configuration (e.g., number of contacts stored in the phonebook, number of stored SMS), or on the network the command may interact with.

In the table below are listed only the commands whose interaction with the SIM or the network could lead to long response timings. When not otherwise specified, timing is referred to set command.
For phonebook and SMS writing and reading related commands, timing is referred to commands issued after phonebook sorting is completed.
For DTMF sending and dialling commands timing is referred to module registered on network ("AT+CREG?" answer is "+CREG: 0,1" or "+CREG: 0,5").
For Python commands, timing is referred to commands issued with module in idle, flash memory not full and not fragmented, and after the first Python command. The first Python command to be issued causes a system initialization that could last a couple of minutes. Baud rate is fixed at 115200.

Command	Estimated maximum time to get response (Seconds)
+COPS	30 (test command)
+CLCK	25 (SS operation) 5 (FDN enabling/disabling)
+CLAC	5
+CPWD	15 (SS operation) 5 (PIN modification)
+CLIP	15 (read command)
+CLIR	15 (read command)
+CCFC	15
+CCWA	15
+CHLD	30
+CPIN	5
+CPBS	5 (FDN enabling/disabling)
+CPBR	5 (single reading) 15 (complete reading of a 250 records full phonebook)
+CPBF	10 (string present in a 250 records full phonebook) 5(string not present)

Command	Estimated maximum time to get response (Seconds)
+CPBW	5
+CACM	5
+CAMM	5
+CPUC	5
+VTS	20 (transmission of full "1234567890*#ABCD" string with no delay between tones, default duration)
+CSCA	5 (read and set commands)
+CSAS	5
+CRES	5
+CMGS	60 after CTRL-Z for SMS not concatenated; 1 to get '>' prompt
+CMSS	60 after CTRL-Z; 1 to get '>' prompt
+CMGW	5 after CTRL-Z for SMS not concatenated; 1 to get '>' prompt
+CMGD	5 (single SMS cancellation) 25 (cancellation of 50 SMS)
+CMGR	5
+CMGL	20 (full listing of 50 SMS)
+CGACT	150
+CGATT	10
D	30 (voice call) Timeout set with ATS7 (data call)
A	30 (voice call) Timeout set with ATS7 (data call)
H	30
+CHUP	5
+COPN	10
+CPOL	10 (set command; read command of 84 records)
+CRSM	5
+FRH	Timeout set with ATS7
+FTH	Timeout set with ATS7
+FRM	Timeout set with ATS7
+FTM	Timeout set with ATS7
+FRS	Timeout set with the command itself
+FTS	Timeout set with the command itself
#MBN	10

#RSCRIPT	30 seconds for a 100 Kbyte file 30 seconds timeout and ERROR message if no bytes are received on the serial line
#WSCRIPT	35 seconds for a 100 Kbyte file 30 seconds timeout and ERROR message if no bytes are sent on the serial line and the file has not been completely sent
#DSCRIPT	120

3.2.5. Command Issuing Timing

The chain Command -> Response shall always be respected and a new command must not be issued before the module has terminated all the sending of its response result code (whatever it may be).
This applies especially to applications that "sense" the **OK** text and therefore may send the next command before the complete code **<CR><LF>OK<CR><LF>** is sent by the module.
It is advisable anyway to wait for at least 20ms between the end of the reception of the response and the issue of the next AT command.
If the response codes are disabled and therefore the module does not report any response to the command, then at least the 20ms pause time shall be respected.
During command mode, due to hardware limitations, under severe CPU load the serial port can loose some characters if placed in autobauding at high speeds. Therefore if you encounter this problem fix the baud rate with **+IPR** command.

NOTE:
If URCs are enabled (e.g. #QSS, +CMTI, etc.), it may happen that an URC is displayed between the AT string (e.g. AT+CREG?<CR>) entered and the AT answer (e.g. <CR><LF>+CREG:0,1<CR><LF><CR><LF>OK<CR><LF>). This may happen if only A or AT are sent to the AT port; it does not happen if AT+, AT#, AT$, etc. are sent to the AT port.

3.3. Storage

3.3.1. Factory Profile And User Profiles

The Telit wireless modules stores the values set by several commands in the internal non volatile memory (NVM), allowing to remember this setting even after power off. In the NVM these values are set either as **factory profile** or as **user profiles**: there are **two customizable user profiles** and **one factory profile** in the NVM of the device: by default the device will start with user profile 0 equal to factory profile.
For backward compatibility each profile is divided into two sections, one **base section** which was historically the one that was saved and restored in early releases of code, and the **extended section** which includes all the remaining values.

The **&W** command is used to save the actual values of **both sections** of profiles into the NVM user profile.
Commands **&Y** and **&P** are both used to set the profile to be loaded at startup. **&Y** instructs the device to load at startup only the **base section**. **&P** instructs the device to load at startup the full profile: **base + extended sections**.
The **&F** command resets to factory profile values only the command of the base section of profile, while the **&F1** resets to factory profile values the full set of base + extended section commands.

The values set by other commands are stored in NVM outside the profile: some of them are stored always, without issuing any **&W**, some other are stored issuing specific commands (**+CSAS**, **#SLEDSAV**, **#VAUXSAV**, **#SKTSAV**, **#ESAV, #PSAV** and **$GPSSAV**); all of these values are read at power-up.

The values set by following commands are stored in the profile base section; if **#SELINT=2** they depend on the specific AT instance:

GSM DATA MODE	+CBST
AUTOBAUD	+IPR
COMMAND ECHO	E
RESULT MESSAGES	Q
VERBOSE MESSAGES	V
EXTENDED MESSAGES	X
FLOW CONTROL OPTIONS	&K, +IFC
DSR (C107) OPTIONS	&S
DTR (C108) OPTIONS	&D
RI (C125) OPTIONS	\R
POWER SAVING	+CFUN
DEFAULT PROFILE	&Y0
S REGISTERS	S0;S2;S3;S4;S5;S7;S12;S25;S30;S38
CHARACTER FORMAT	+ICF

The values set by following commands are stored in the profile extended section and, if the newer AT command interface style has been selected (see **#SELINT=2**), they depend on the specific AT instance (see **+CMUX**):

+FCLASS	+ILRR	+DR
+CSCS	+CR	+CRLP
+CRC	+CSNS	+CVHU
+CREG	+CLIP	+CLIR
+CCWA	+CUSD	+CAOC
+CSSN	+CIND	+CMER
+CPBS	+CMEE	+CGREG
+CGEREP	+CMGF	+CSDH
+CNMI	#QSS	#ACAL[5]
#TEMPMON[6]	#ACALEXT	#ECAM
#SMOV	#MWI	#NITZ
#SKIPESC	#E2ESC	#STIA
$GPSNMUN	#CESTHLCK	#CFLO
+CSTF	+CSDF	+CTZU
+CAPD	+CCWE	+CSIL
+CTZR	#CFF	#CODECINFO
#CMEEMODE	#MMSSNH	

The values set by following commands are stored in the profile extended section and they don't depend on the specific AT instance (see **+CMUX**):

+CALM	+CRSL	+CMUT[5]
+CLVL[5]	+VTD	+CSCB[7]
#CAP[5]	#SRS[5]	#SRP[5]
#STM[5]	#DVI	#E2SMSRI
#DAC	#CODEC	#SHFEC[5]
#HFMICG[5]	#HSMICG	#SHFSD[5]
#SPKMUT	#NITZ	#E2SLRI
#SIMDET	#TEMPMON[6]	#PSEL
#HFRECG	#HSRECG	#SHFAGC
#SHSAGC	#SHSEC	#SHSNR
#SHFNR	#SHSSD	#TSVOL
#CPUMODE	#DVIEXT	#PSMRI
#STTA	#SIDETG	

The values set by following commands are automatically stored in NVM, without issuing any storing command and independently from the profile (unique values), and are automatically restored at startup:

[5] If **#SELINT=2** they depend on the CMUX 0 instance only
[6] It is partially stored in NVM, moreover only a part of it can depend on the specific **CMUX** instance; see command description.
[7] +CSCB is still stored in the profile extended section only for backward compatibility issues: its actual storing and restoring are accomplished issuing **+CSAS** and **+CRES**

#SELINT	+COPS[8]	+CGCLASS
+CGDCONT	+CGQMIN	+CGQREQ
#REGMODE	#PLMNODE	#COPSMODE
#DIALMODE	#BND	#AUTOBND
#ENS	#SCFG	#JDR
#ENHSIM	#AUTOATT	#TXMONMODE
#TTY	#ICMP	#GSMCONT
#NWSCANTMR	#SMSMODE	#DNS
#TCPMAXDAT	#TCPREASS	#SWLEVEL
#CPASMODE	#FASTCCID	+CGSMS
#V24MODE	+CPLS	#SIMINCFG
#RS485		

The values set by following commands are stored in NVM on demand, issuing specific commands and independently from the profile:

+CSCA	+CSMP	+CSCB

stored by +CSAS[9] command and restored by +CRES[9] command

#SLED		

stored by #SLEDSAV[10] command

#VAUX		

stored by #VAUXSAV[11] command

#USERID	#PASSW	#PKTSZ
#DSTO	#SKTTO	#SKTSET
#SKTCT		

stored by #SKTSAV command and automatically restored at startup; factory default valutes are restored by #SKTRST command

#ESMTP	#EADDR	#EUSER
#EPASSW		

stored by #ESAV command and automatically restored at startup; factory default valutes are restored by #ERST command.

$GPSP	$GPSD	$GPSAT
$GPSCON		

stored by $GPSSAV command and automatically restored at startup; factory default valutes are restored by $GPSRST command

#BIQUADIN	# BIQUADINEX	# BIQUADOUT
# BIQUADOUTEX		

stored by #PSAV command and automatically restored at startup; factory default valutes are restored by #PRST command.

[8] It is partially stored in NVM; see command description.
[9] Both commands **+CSAS** (see §3.x.3.2.5) and **+CRES** (see §3.x.3.2.6) deal with non-volatile memory, intending for it either the NVM and the SIM storage.
[10] Valid for **#SELINT=2** only.
[11] Valid for **#SELINT=2** only.

3.4. AT Commands Availability Table

The following table shows the link Software Version / Product. It is used jointly with the second reported table to verify if the selected AT command is supported by the couple Software Version / Product.

Software Version	Applicable products
SW 10.01.xx3 16.01.xx3	GE865-QUAD, GE866-QUAD GC864-QUAD, GC864-QUAD V2, GC864-DUAL V2, GE864-QUAD V2, GE864-DUAL V2, GE864-QUAD AUTOMOTIVE V2, GE864-QUAD ATEX, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GL865-QUAD, GT863-PY, GT864-PY, GT864-QUAD, GE864-GPS, GE910-QUAD V3
SW 13.00.xx9	GE910-QUAD, GE910-QUAD AUTO, GE910-GNSS

The following table lists the AT commands set and matches the availability of every single command with the Telit module by means of the software version as showed on the table above.

COMMAND	SW 10.01.xx3 16.01.xx3	SW 13.00.xx9	Function	Page
Command Line General Format – Command Line Prefixes				
AT	•	•	Starting A Command Line	52

#SYSHALT	•[16]	-	System turn-off	374
#ENAUSIM	•	•	Enable USIM application	374
#SIMINCFG	•[17]	-	SIMIN pin configuration	373
#LANG	•	•	Select language	375
#CFF	•	•	Call Forwarding Flags	375
#CHUP	•	•	Hang Up Call	376
#ENCALG	•	•	Set Encryption Algorithm	376
#RS485	•	-	RS485 enable/disable and configure	378
+CAPD	•	•	Postpone alarm	160
#RFSTS	•	•	Read current network status	379
#CMUXMODE	•	•	Set CMUX mode	379
#PORTCFG	-	•	Connect physical ports to Service Access Points	380
#FILEPWD	•	•	Change and insert file system password	381
#NCIH	•	•	NO CARRIER Indication Handling	382
#ATDELAY	•	•	AT Command Delay	382
#PCLFIX	•	•	Power Fix	383
#PCLMIN	•	•	PCL Minimum	385
#TESTMODE	•	•	Enable Test Mode command in not signalling mode	387
#IDLEPAGING	•	-	Select the GSM paging number to skip	390
#SPIOPEN	-	•	Initialize modem serial port with SPI protocol	390
#SPICLOSE	-	•	De-initialize modem serial port with SPI protocol	391
#SPIRW	-	•	Write a buffer to the SPI and print the read data	391
Custom AT Commands – Ring Indicator Commands				
#E2RI	•	•	Event Ring Indicator	392
#E2SLRI	•	•	Socket Listen Ring Indicator	392
#E2SMSRI	•	•	SMS Ring Indicator	393
#PSMRI	•	•	Power saving mode ring	394
#OTASETRI	•	•	OTA Set Ring Indicator	395
Custom AT Commands – AT Run Commands				
#SMSATRUN	•	•	Enable SMS Run AT Service	397
#SMSATRUNCFG	•	•	Set SMS Run AT Service parameters	397
#SMSATWL	•	•	SMS AT Run white list	398
#TCPATRUNCFG	•	•	Set TCP Run AT service parameters	399
#TCPATRUNL	•	•	TCP Run AT Service in server mode	401
#TCPATRUNFRWL	•	•	TCP AT Run Firewall list	402
#TCPATRUNAUTH	•	•	TCP AT Run authentication param list	403
#TCPATRUND	•	•	TCP AT Run in client mode	404
#TCPATRUNCLOSE	•	•	Close TCP Run AT socket	405
#TCPATCMDSEQ	•	•	TCP AT Run command sequence	405
#TCPATCONSER	•	•	TCP Run AT service to serial port	405
#ATRUNDELAY	•	•	Run AT Command execution	406
CONSUME Commands				
#CONSUMECFG	•	•	Configure consume parameters	415
#ENACONSUME	•	•	Enable consume functionality	416
#STATSCONSUME	•	•	Report consume statistics	417
#BLOCKCONSUME	•	•	Block/unblock a type of service	419
Custom AT Commands – Event Monitor Commands				
#ENAEVMONI	•	•	Enable EvMoni Service	407
#ENAEVMONICFG	•	•	EvMoni Service params	407

[16] Only available on GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL and GE866-QUAD

[17] Only available on GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL and GE866-QUAD

3.5. AT Commands References

3.5.1. Command Line General Format

3.5.1.1. Command Line Prefixes

3.5.1.1.1. Starting A Command Line - AT

AT - Starting A Command Line	SELINT 0 / 1 / 2
AT	The prefix **AT**, or **at**, is a two-character abbreviation (**ATtention**), always used to start a command line to be sent from TE to TA, with the only exception of AT#/ prefix
Reference	3GPP TS 27.007

3.5.1.1.2. Last Command Automatic Repetition - A/

A/ - Last Command Automatic Repetition	SELINT 0 / 1 / 2
A/	If the prefix **A/** or **a/** is issued, the MODULE immediately execute once again the body of the preceding command line. No editing is possible and no termination character is necessary. A command line may be repeated multiple times through this mechanism, if desired. If **A/** is issued before any command line has been executed, the preceding command line is assumed to have been empty (that results in an **OK** result code). Note: this command works only at fixed IPR. Note: the custom prefix AT#/ has been defined: it causes the last command to be executed again too; but it doesn't need a fixed IPR.
Reference	V25ter

3.5.1.1.3. Repeat Last Command - AT#/

AT#/ - Repeat Last Command	SELINT 0 / 1 / 2
AT#/	The prefix is used to execute again the last received command.

3.5.2. General Configuration Commands

3.5.2.1. AT Interface Backward Compatibility

There are some slight modifications amongst the AT interfaces of Telit products. In order to keep backward compatibility and on the same time to give the opportunity to the customer to get competitor compatibility, Telit modules offer the specific command **#SELINT** to switch the behaviour of the device and its AT command interface. It is up to the user to select the AT interface he prefers.

The following table shows which AT commands interface can be applied and is default for the specific product:

Product	#SELINT=0	#SELINT=1	#SELINT=2
GT863-PY			•(default)
GT864-QUAD			•(default)

GE910-GNSS			•(default)

3.5.2.1.1. Select Interface Style - #SELINT

#SELINT - Select Interface Style	SELINT 0 / 1
AT#SELINT[=<v>]	Set command sets the AT command interface style depending on parameter **<v>**. Parameter: **<v>** - AT command interface style 0 - switches the AT command interface of the products, to the GM862-GSM and GM862-GPRS interface style 1 - switches the AT command interface of the products, to the GM862-PCS, PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY interface style 2 - switches the AT command interface style of the product, to the new products like GE864, GC864 and the GPS products[37] Note: If parameter is omitted then the behaviour of Set command is the same as read command.
AT#SELINT?	Read command reports the current interface style.
AT#SELINT=?	Test command reports the available range of values for parameter **<v>**.
Note	It's suggested to reboot the module after every **#SELINT** setting.

#SELINT - Select Interface Style	SELINT 2
AT#SELINT=[<v>]	Set command sets the AT command interface style depending on parameter **<v>**. Parameter: **<v>** - AT command interface style 0 - switches the AT command interface of the products, to the GM862-GSM and GM862-GPRS interface style 1 - switches the AT command interface of the products, to the GM862-PCS, PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY interface style 2 - switches the AT command interface style of the product, to the new products like GE864, GC864 and the GPS products[12]
AT#SELINT?	Read command reports the current interface style.
AT#SELINT=?	Test command reports the available range of values for parameter **<v>**.
Note	It's suggested to reboot the module after every **#SELINT** setting.
Note	Issuing **AT#SELINT=<v>** when the 3GPP TS 27.010 multiplexing protocol control channel has been enabled (see **+CMUX**) causes an **ERROR** result code to be returned.
Note	Issuing **AT#SELINT=<v>** when the ENS functionality has been previously enabled (see **#ENS**) causes an **ERROR** result code to be returned.
Note	Issuing **AT#SELINT=<v>** when the SMS Commands Operation Mode has been previously enabled (see **#SMSMODE**) causes an **ERROR** result code to be returned.

[37] Under the **#SELINT=2**, all the new functionalities like CMUX, SAP, Multisocket are available. Moreover, all the AT commands have been improved according to the ETSI specifications.

3.5.3. Hayes Compliant AT Commands

3.5.3.1. Generic Modem Control

3.5.3.1.1. Set To Factory-Defined Configuration - &F

&F - Set To Factory-Defined Configuration	SELINT 0 / 1 / 2
AT&F[<value>]	Execution command sets the configuration parameters to default values specified by manufacturer; it takes in consideration hardware configuration switches and other manufacturer-defined criteria. Parameter: **<value>**: 0 - just the factory profile base section parameters are considered. 1 - either the factory profile base section and the extended section are considered (full factory profile). Note: if parameter **<value>** is omitted, the command has the same behaviour as **AT&F0**
Reference	V25ter.

3.5.3.1.2. Soft Reset - Z

Z - Soft Reset	SELINT 0 / 1 / 2
ATZ[<n>]	Execution command loads the base section of the specified user profile and the extended section of the default factory profile. Parameter: **<n>** 0..1 - user profile number Note: any call in progress will be terminated. Note: if parameter **<n>** is omitted, the command has the same behaviour as **ATZ0**.
Reference	V25ter.

3.5.3.1.3. Select Active Service Class - +FCLASS

+FCLASS - Select Active Service Class	SELINT 0 / 1 / 2
AT+FCLASS=<n>	Set command sets the wireless module in specified connection mode (data, fax, voice), hence all the calls done afterwards will be data or voice. Parameter: **<n>** 0 - data 1 - fax class 1 8 - voice

+FCLASS - Select Active Service Class	SELINT 0 / 1 / 2
AT+FCLASS?	Read command returns the current configuration value of the parameter **<n>**.
AT+FCLASS=?	Test command returns all supported values of the parameters **<n>**.
Reference	3GPP TS 27.007

3.5.3.1.4. Default Reset Basic Profile Designation - &Y

&Y - Default Reset Basic Profile Designation	SELINT 0 / 1 / 2
AT&Y[<n>]	Execution command defines the basic profiles which will be loaded on startup. Parameter: **<n>** 0..1 - profile (default is 0): the wireless module is able to store 2 complete configurations (see **&W**). Note: differently from command **Z<n>**, which loads just once the desired profile, the one chosen through command **&Y** will be loaded on every startup. Note: if parameter is omitted, the command has the same behaviour as **AT&Y0**

3.5.3.1.5. Default Reset Full Profile Designation - &P

&P - Default Reset Full Profile Designation	SELINT 0 / 1 / 2
AT&P[<n>]	Execution command defines which full profile will be loaded on startup. Parameter: **<n>** 0..1 – profile number: the wireless module is able to store 2 full configurations (see command **&W**). Note: differently from command **Z<n>**, which loads just once the desired profile, the one chosen through command **&P** will be loaded on every startup. Note: if parameter is omitted, the command has the same behaviour as **AT&P0**
Reference	Telit Specifications

3.5.3.1.6. Store Current Configuration - &W

&W - Store Current Configuration	SELINT 0 / 1 / 2
AT&W[<n>]	Execution command stores on profile **<n>** the complete configuration of the device. Parameter: **<n>** 0..1 - profile Note: if parameter is omitted, the command has the same behaviour of **AT&W0**.

3.5.3.1.7. Store Telephone Number - &Z

&Z - Store Telephone Number In The Wireless Module Internal Phonebook	**SELINT 0 / 1 / 2**
AT&Z<n>=<nr>	Execution command stores in the record **<n>** the telephone number **<nr>**. The records cannot be overwritten, they must be cleared before rewriting. Parameters: **<n>** - phonebook record **<nr>** - telephone number (string type) Note: the wireless module has a built in non volatile memory in which 10 telephone numbers of a maximum 24 digits can be stored Note: to delete the record **<n>** the command **AT&Z<n>=<CR>** must be issued. Note: the records in the module memory can be viewed with the command **&N**, while the telephone number stored in the record ***n*** can be dialed by giving the command **ATDS=<*n*>**.

3.5.3.1.8. Display Stored Numbers - &N

&N - Display Internal Phonebook Stored Numbers	**SELINT 0 / 1 / 2**
AT&N[<n>]	Execution command returns the telephone number stored at the **<n>** position in the internal memory. Parameter: **<n>** - phonebook record number Note: if parameter **<n>** is omitted then all the internal records are shown.

3.5.3.1.9. Manufacturer Identification - +GMI

+GMI - Manufacturer Identification	**SELINT 0 / 1 / 2**
AT+GMI	Execution command returns the manufacturer identification. Note: this is one of the commands whose output differs depending on the last **#SELINT** setting.
Reference	V.25ter

3.5.3.1.10. Model Identification - +GMM

+GMM - Model Identification	**SELINT 0 / 1 / 2**
AT+GMM	Execution command returns the model identification.
Reference	V.25ter

3.5.3.1.11. Revision Identification - +GMR

+GMR - Revision Identification	SELINT 0 / 1 / 2
AT+GMR	Execution command returns the software revision identification.
Reference	V.25ter

3.5.3.1.12. Capabilities List - +GCAP

+GCAP - Capabilities List	SELINT 0 / 1 / 2
AT+GCAP	Execution command returns the equipment supported command set list. Where: **+CGSM**: GSM ETSI command set **+FCLASS**: Fax command set **+DS**: Data Service common modem command set **+MS**: Mobile Specific command set
Reference	V.25ter

3.5.3.1.13. Serial Number - +GSN

+GSN - Serial Number	SELINT 0 / 1 / 2
AT+GSN	Execution command returns the device board serial number. Note: The number returned is not the IMSI, it is only the board number
Reference	V.25ter

3.5.3.1.14. Display Configuration And Profile - &V

&V - Display Current Base Configuration And Profile	SELINT 0 / 1 / 2
AT&V	Execution command returns some of the base configuration parameters settings. Note: this is one of the commands whose output differs depending on the last **#SELINT** setting. Note: the row of information about **CTS (C106) OPTIONS** is in the output of **&V** only for compatibility reasons and represents only a dummy value.

3.5.3.1.15. Display Configuration And Profile - &V0

&V0 - Display Current Configuration And Profile	SELINT 0 / 1 / 2
AT&V0	Execution command returns all the configuration parameters settings. Note: this command is the same as **&V**, it is included only for backwards compatibility.

&V0 - Display Current Configuration And Profile	**SELINT 0 / 1 / 2**
	Note: this is one of the commands whose output differs depending on the last **#SELINT** setting. Note: the row of information about **CTS (C106) OPTIONS** is in the output of **&V0** only for compatibility reasons and represents only a dummy value.

3.5.3.1.16. S Registers Display - &V1

&V1 - S Registers Display	**SELINT 0 / 1 / 2**
AT&V1	Execution command returns the value of the **S** registers in decimal and hexadecimal value in the format: **REG DEC HEX** **<reg0> <dec> <hex>** **<reg1> <dec> <hex>** ... where **<reg*n*>** - **S** register number 000..005 007 012 025 038 **<dec>** - current value in decimal notation **<hex>** - current value in hexadecimal notation

3.5.3.1.17. Extended S Registers Display - &V3

&V3 - Extended S Registers Display	**SELINT 0 / 1 / 2**
AT&V3	Execution command returns the value of the **S** registers in decimal and hexadecimal value in the format: **REG DEC HEX** **<reg0> <dec> <hex>** **<reg1> <dec> <hex>** ... where **<reg*n*>** - **S** register number 000..005 007 012 025 030 038 **<dec>** - current value in decimal notation **<hex>** - current value in hexadecimal notation

3.5.3.1.18. Display Last Connection Statistics - &V2

&V2 - Display Last Connection Statistics		SELINT 0 / 1 / 2
AT&V2	Execution command returns the last connection statistics & connection failure reason.	

3.5.3.1.19. Single Line Connect Message - \V

\V - Single Line Connect Message		SELINT 0 / 1 / 2
AT\V<n>	Execution command set single line connect message. Parameter: **<n>** 0 - off 1 - on	

3.5.3.1.20. Country Of Installation - +GCI

+GCI - Country Of Installation		SELINT 0 / 1 / 2
AT+GCI=<code>	Set command selects the installation country code according to ITU-T.35 Annex A. Parameter: **<code>** 59 - it currently supports only the Italy country code	
AT+GCI?	Read command reports the currently selected country code.	
AT+GCI=?	Test command reports the supported country codes.	
Reference	V25ter.	

3.5.3.1.21. Line Signal Level - %L

%L - Line Signal Level		SELINT 0 / 1 / 2
AT%L	It has no effect and is included only for backward compatibility with landline modems	

3.5.3.1.22. Line Quality - %Q

%Q - Line Quality		SELINT 0 / 1 / 2
AT%Q	It has no effect and is included only for backward compatibility with landline modems	

3.5.3.1.23. Speaker Loudness - L

L - Speaker Loudness	SELINT 0 / 1 / 2
ATL<n>	It has no effect and is included only for backward compatibility with landline modems

3.5.3.1.24. Speaker Mode - M

M - Speaker Mode	SELINT 0 / 1 / 2
ATM<n>	It has no effect and is included only for backward compatibility with landline modems

3.5.3.1.25. Master Reset - +CMAR

+CMAR – Master Reset	SELINT 0 / 1
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values. Parameters: **< phone lock code>** - string type representing an 8 digits security code. It must be verified before performing the master reset. Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process. Note: the command is available for SELINT 0 and 1 only in 10.00.xx3 release and onwards.
AT+CMAR=?	Test command tests for command existence.

+CMAR – Master Reset	SELINT 2
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values. Parameters: **< phone lock code>** - string type representing an 8 digits security code. It must be verified before performing the master reset. Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process.
AT+CMAR=?	Test command tests for command existence.

3.5.3.2. DTE - Modem Interface Control

3.5.3.2.1. Command Echo - E

E - Command Echo	SELINT 0 / 1 / 2
ATE[<n>]	Set command enables/disables the command echo. Parameter: **<n>** 0 - disables command echo 1 - enables command echo (factory default) , hence command sent to the device are echoed back to the **DTE** before the response is given. Note: if parameter is omitted, the command has the same behaviour of **ATE0**
Reference	V25ter

3.5.3.2.2. Quiet Result Codes - Q

Q - Quiet Result Codes	SELINT 0 / 1
ATQ[<n>]	Set command enables or disables the result codes. Parameter: **<n>** 0 - enables result codes (factory default) 1 - every result code is replaced with a **<CR>** 2 - disables result codes Note: After issuing either **ATQ1** or **ATQ2** every information text transmitted in response to commands is not affected Note: if parameter is omitted, the command has the same behaviour as **ATQ0**
Example	*After issuing ATQ1* AT+CGACT=? **+CGACT: (0-1)** ***a <cr> ends the response*** After issuing ATQ2 AT+CGACT=? **+CGACT: (0-1) nothing is appended to the response**
Reference	V25ter
Q - Quiet Result Codes	**SELINT 2**
ATQ[<n>]	Set command enables or disables the result codes. Parameter: **<n>** 0 - enables result codes (factory default) 1 - disables result codes

Q - Quiet Result Codes		SELINT 0 / 1
	2 - disables result codes (only for backward compatibility) Note: After issuing either **ATQ1** or **ATQ2** every information text transmitted in response to commands is not affected Note: if parameter is omitted, the command has the same behaviour of **ATQ0**	
Example	*After issuing ATQ1 or ATQ2* AT+CGACT=? **+CGACT: (0-1) nothing is appended to the response**	
Reference	V25ter	

3.5.3.2.3. Response Format - V

V - Response Format		SELINT 0 / 1 / 2
ATV[<n>]	Set command determines the contents of the header and trailer transmitted with result codes and information responses. It also determines if result codes are transmitted in a numeric form or an alphanumeric form (see [§3.2.3 Information Responses And Result Codes] for the table of result codes). Parameter: **<n>** 0 - limited headers and trailers and numeric format of result codes information responses: **<text><CR><LF>** result codes: **<numeric code><CR>** 1 - full headers and trailers and verbose format of result codes (factory default) information responses: **<CR><LF>** **<text><CR><LF>** result codes: **<CR><LF>** **<verbose code><CR><LF>** Note: the **<text>** portion of information responses is not affected by this setting. Note: if parameter is omitted, the command has the same behaviour of ATV0	
Reference	V25ter	

3.5.3.2.4. Extended Result Codes - X

X - Extended Result Codes	SELINT 0 / 1 / 2
ATX[<n>]	Set command selects the result code messages subset used by the modem to inform the **DTE** of the result of the commands. Parameter: **<n>** - (factory default is 1) 0 - on entering dial-mode **CONNECT** result code is given; **OK**, **CONNECT**, **RING**, **NO CARRIER**, **ERROR**, **NO ANSWER** result codes are enabled . Dial tone and busy detection (**NO DIALTONE** and **BUSY** result codes) are disabled. 1..4 - on entering dial-mode **CONNECT <text>** result code is given; all the other result codes are enabled. Note: If parameter is omitted, the command has the same behaviour of **ATX0**
Note	For complete control on **CONNECT** response message see also **+DR** command.
Reference	V25ter

3.5.3.2.5. Identification Information - I

I - Identification Information	SELINT 0 / 1 / 2
ATI[<n>]	Execution command returns one or more lines of information text followed by a result code. Parameter: **<n>** 0 - numerical identifier 1 - module checksum 2 - checksum check result 3 - manufacturer 4 - product name 5 - DOB version Note: this is one of the commands whose output differs depending on the last **#SELINT** setting. Note: if parameter is omitted, the command has the same behaviour of **ATI0**
Reference	V25ter

3.5.3.2.6. Data Carrier Detect (DCD) Control - &C

&C - Data Carrier Detect (DCD) Control	SELINT 0 / 1 / 2
AT&C[<n>]	Set command controls the RS232 **DCD** output behaviour. Parameter: **<n>**

&C - Data Carrier Detect (DCD) Control	**SELINT 0 / 1 / 2**
	0 - **DCD** remains **high** always. 1 - **DCD** follows the Carrier detect status: if carrier is detected **DCD** is high, otherwise **DCD** is **low**. (factory default) 2 - **DCD off** while disconnecting Note: if parameter is omitted, the command has the same behaviour of **AT&C0**
Reference	V25ter

3.5.3.2.7. Data Terminal Ready (DTR) Control - &D

&D - Data Terminal Ready (DTR) Control	**SELINT 0 / 1**
AT&D[<n>]	Set command controls the Module behaviour to the RS232 **DTR** transitions. Parameter: **<n>** 0 - device ignores **DTR** transitions (factory default) 1 - when the MODULE is connected, the **High** to **Low** transition of **DTR** pin sets the device in command mode, the current connection is NOT closed 2 - when the MODULE is connected , the **High** to **Low** transition of **DTR** pin sets the device in command mode and the current connection is closed 3 - device ignores **DTR** transitions 4 - **C108/1** operation is disabled 5 - **C108/1** operation is enabled; same behaviour as for **<n>=2** Note: if a connection has been set up issuing either **#SKTD** or **#SKTOP**, then **AT&D1** has the same effect as **AT&D2**. Note: if **AT&D2** has been issued and the **DTR** has been tied **low**, autoanswering is inhibited and it is possible to answer only issuing command **ATA.** Note: if parameter is omitted, the command has the same behaviour as **AT&D0**
Reference	V25ter

&D - Data Terminal Ready (DTR) Control	**SELINT 2**
AT&D[<n>]	Set command controls the Module behaviour to the RS232 **DTR** transitions. Parameter: **<n>** 0 - device ignores **DTR** transitions (factory default); if **+CVHU** current setting is **different from 2** then every setting **AT&D0** is equivalent to **AT&D5** 1 - when the MODULE is connected, the **High** to **Low** transition of **DTR** pin sets the device in command mode, the current connection is NOT closed; if **+CVHU** current setting is **different from 2** then issuing **AT&D1** is equivalent to **AT&D5** 2 - when the MODULE is connected , the **High** to **Low** transition of **DTR** pin sets the device in command mode and the current connection is closed; if **+CVHU** current setting is **different from 2** then issuing **AT&D2** is equivalent to

&D - Data Terminal Ready (DTR) Control	SELINT 2
	AT&D5 3 - device ignores **DTR** transitions; if **+CVHU** current setting is **different from 2** then issuing **AT&D3** is equivalent to **AT&D5** 4 - **C108/1** operation is disabled; if **+CVHU** current setting is **different from 2** then issuing **AT&D4** is equivalent to **AT&D5** 5 - **C108/1** operation is enabled; same behaviour as for **<n>=2** Note: if a connection has been set up issuing either **#SKTD** or **#SKTOP**, then **AT&D1** has the same effect as **AT&D2**. If a connection has been set up issuing **AT#SD** then **AT&D1** and **AT&D2** have different effect, as described above. Note: if **AT&D2** has been issued and the **DTR** has been tied **Low**, autoanswering is inhibited and it is possible to answer only issuing command **ATA**. Note: if parameter is omitted, the command has the same behaviour of **AT&D0**
Reference	V25ter

3.5.3.2.8. Standard Flow Control - \Q

\Q - Standard Flow Control	SELINT 0 / 1 / 2
AT\Q[<n>]	Set command controls the RS232 flow control behaviour. Parameter: **<n>** 0 - no flow control 1 - software bi-directional with filtering (**XON/XOFF**) 2 - hardware mono-directional flow control (only **CTS** active) 3 - hardware bi-directional flow control (both **RTS/CTS** active) (factory default) Note: if parameter is omitted, the command has the same behaviour as **AT\Q0** Note: Hardware flow control (**AT\Q3**) is not active in command mode. Note: **\Q's** settings are functionally a subset of **&K**'s ones.
Reference	V25ter

3.5.3.2.9. Flow Control - &K

&K - Flow Control	SELINT 0 / 1 / 2
AT&K[<n>]	Set command controls the RS232 flow control behaviour. Parameter: **<n>**

&K - Flow Control	SELINT 0 / 1 / 2
	0 - no flow control 1 - hardware mono-directional flow control (only **CTS** active) 2 - software mono-directional flow control (**XON/XOFF**) 3 - hardware bi-directional flow control (both **RTS/CTS** active) (factory default) 4 - software bi-directional with filtering (**XON/XOFF**) 5 - pass through: software bi-directional without filtering (**XON/XOFF**) 6 - both hardware bi-directional flow control (both **RTS/CTS** active) and software bi-directional flow control (**XON/XOFF**) with filtering Note: if parameter is omitted, the command has the same behaviour as **AT&K0** Note: **&K** has no Read Command. To verify the current setting of **&K**, simply check the settings of the active profile issuing **AT&V**. Note: Hardware flow control (**AT&K3**) is not active in command mode.

3.5.3.2.10. Data Set Ready (DSR) Control - &S

&S - Data Set Ready (DSR) Control	SELINT 0 / 1 / 2
AT&S[<n>]	Set command controls the RS232 **DSR** pin behaviour. Parameter: **<n>** 0 - always **High** 1 - follows the GSM traffic channel indication. 2 - **High** when connected 3 - **High** when device is ready to receive commands (factory default). Note: if option 1 is selected then **DSR** is tied **High** when the device receives from the network the GSM traffic channel indication. Note: in power saving mode the **DSR** pin is always tied **Low**. Note: if parameter is omitted, the command has the same behaviour of **AT&S0** Note: If Selint=2 is selected, and option 1 and 2 are active, **DSR** will not tied **High** in case of GSM voice connection

3.5.3.2.11. Ring (RI) Control - \R

\R - Ring (RI) Control	SELINT 0 / 1 / 2
AT\R[<n>]	Set command controls the **RING** output pin behaviour. Parameter: **<n>** 0 - **RING** on during ringing and further connection

\R - Ring (RI) Control	SELINT 0 / 1 / 2
	1 - **RING** on during ringing (factory default) 2 - **RING** follows the ring signal Note: to check the ring option status use the **&V** command. Note: if parameter is omitted, the command has the same behaviour of **AT\R0**

3.5.3.2.12. Fixed DTE Interface Rate - +IPR

+IPR - Fixed DTE Interface Rate	SELINT 0 / 1
AT+IPR=<rate>	Set command specifies the **DTE** speed at which the device accepts commands during command mode operations; it may be used to fix the **DTE-DCE** interface speed. Parameter: **<rate>** 0 ..300 1200 2400 4800 9600 19200 38400 57600 115200 If **<rate>** is set to 0, then automatic speed detection is enabled and also character format (see **+ICF**) is set to auto-detect. (default) If **<rate>** is specified and not 0, **DTE-DCE** speed is fixed at that speed, hence no speed auto-detection (autobauding) is enabled. Note: While in autobauding mode the 300 baud rate is not supported.
AT+IPR?	Read command returns the current value of **+IPR** parameter.
AT+IPR=?	Test command returns the supported serial port speed list.
Reference	V25ter

+IPR - Fixed DTE Interface Rate	SELINT 2
AT+IPR=<rate>	Set command specifies the **DTE** speed at which the device accepts commands during command mode operations; it may be used to fix the **DTE-DCE** interface speed. Parameter: **<rate>** 0 (default; not supported for 13.00.xxx SW version) ..300

+IPR - Fixed DTE Interface Rate	SELINT 2
	1200 2400 4800 9600 19200 38400 57600 115200 (default for 13.00.xxx SW version) 230400 (supported only for 13.00.xxx SW version, starting from 13.00.xx2) 460800 (supported only for 13.00.xxx SW version, starting from 13.00.xx2) 921600 (supported only for 13.00.xxx SW version, starting from 13.00.xx2) If **<rate>** is set to 0, then automatic speed detection is enabled and also character format (see **+ICF**) is set to auto-detect. (default) If **<rate>** is specified and not 0, **DTE-DCE** speed is fixed at that speed, hence no speed auto-detection (autobauding) is enabled. Note: While in autobauding mode the 300 baud rate is not supported.
AT+IPR?	Read command returns the current value of **+IPR** parameter.
AT+IPR=?	Test command returns the list of supported autodetectable **<rate>** values and the list of fixed-only **<rate>** values in the format: **+IPR**:(list of supported autodetectable **<rate>** values), (list of fixed-only **<rate>** values) In 13.00.xxx SW version test command returns the list of fixed-only **<rate>** values in the format: **+IPR**: (list of fixed-only **<rate>** values)
Reference	V25ter

3.5.3.2.13. DTE-Modem Local Flow Control - +IFC

+IFC - DTE-Modem Local Flow Control	SELINT 0 / 1 / 2
AT+IFC=<by_te>, <by_ta>	Set command selects the flow control behaviour of the serial port in both directions: from **DTE** to **modem** (**<by_ta>** option) and from **modem** to **DTE** (**<by_te>**) Parameters: **<by_te>** - flow control option for the data received by **DTE** 0 - flow control None 1 - **XON/XOFF** filtered 2 - **C105** (**RTS**) (factory default) 3 - **XON/XOFF** not filtered **<by_ta>** - flow control option for the data sent by **modem** 0 - flow control None

+IFC - DTE-Modem Local Flow Control	SELINT 0 / 1 / 2
	1 - **XON/XOFF** 2 - **C106** (**CTS**) (factory default) Note: Hardware flow control (**AT+IFC=2,2**) is not active in command mode. Note: This command is equivalent to **&K** command.
AT+IFC?	Read command returns active flow control settings. Note: If flow control behavior has been set with **AT&Kn** command with the parameter that is not allowed by **AT+IFC** the read command **AT+IFC?** will return: **+IFC: 0,0**
AT+IFC=?	Test command returns all supported values of the parameters **<by_te>** and **<by_ta>**.
Reference	V25ter

3.5.3.2.14. DTE-Modem Local Rate Reporting - +ILRR

+ILRR - DTE-Modem Local Rate Reporting	SELINT 0 / 1 / 2
AT+ILRR=<n>	Set command controls whether or not the **+ILRR: <rate>** information text is transmitted from the **modem** (module) to the **DTE**. Parameter: **<n>** 0 - local port speed rate reporting disabled (factory default) 1 - local port speed rate reporting enabled Note: If **AT+IPR=0** (in autobauding) local port speed reported will be 0. Note: this information if enabled is sent upon connection.
AT+ILRR?	Read command returns active setting of **<n>**.
AT+ILRR=?	Test command returns all supported values of the parameter **<n>**
Reference	V25ter

3.5.3.2.15. DTE-Modem Character Framing - +ICF

+ICF - DTE-Modem Character Framing	SELINT 0 / 1 / 2
AT+ICF=<format> [,<parity>]	Set command defines the asynchronous character framing to be used when autobauding is disabled. Parameters: **<format>** - determines the number of bits in the data bits, the presence of a parity bit, and the number of stop bits in the start-stop frame. 0 – autodetection (not available for 13.00.xxx SW releases) 1 - 8 Data, 2 Stop

+ICF - DTE-Modem Character Framing	SELINT 0 / 1 / 2
	2 - 8 Data, 1 Parity, 1 Stop 3 - 8 Data, 1 Stop 5 - 7 Data, 1 Parity, 1 Stop <**parity**> - determines how the parity bit is generated and checked, if present; setting this subparameter is mandatory and has a meaning only if <**format**> subparameter is either 2 or 5 (for 13.00.xxx SW releases meaningless <**format**> values are not allowed). 0 - Odd 1 - Even
AT+ICF?	Read command returns current settings for subparameters <**format**> and <**parity**>. If current setting of subparameter <**format**> is neither 2 nor 5, the current setting of subparameter <**parity**> will always represented as 0.
AT+ICF=?	Test command returns the ranges of values for the parameters <**format**> and <**parity**>
Reference	V25ter
Example	*Auto detect* AT+ICF = 0 OK *8N2* AT+ICF = 1 OK *8O1* AT+ICF = 2,0 OK *8E1* AT+ICF = 2,1 OK *8N1* AT+ICF = 3 OK *7O1* AT+ICF = 5,0 OK *7E1* AT+ICF = 5,1 OK

3.5.3.3. Call Control

3.5.3.3.1. Dial - D

D – Dial	**SELINT 0 / 1**
ATD<number>[;]	Execution command starts a call to the phone number given as parameter. If ";" is present, a VOICE call to the given number is performed, regardless of the current value of the connection mode set by **+FCLASS** command. Parameter: **<number>** - phone number to be dialed Note: type of call (data, fax or voice) depends on last **+FCLASS** setting. Note: the numbers accepted are 0-9 and *,#,"A", "B", "C", "D","+". Note: for backwards compatibility with landline modems modifiers "T", "P", "R", ",", "W", "!", "@" are accepted but have no effect.
ATD><str>[;]	Issues a call to phone number which corresponding alphanumeric field is **<str>**; all available memories will be searched for the correct entry. If "**;**" is present a **voice** call is performed. Parameter: **<str>** - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks. Note: parameter **<str>** is case sensitive. Note: used character set should be the one selected with command Select TE character set **+CSCS**.
ATD><mem><n>[;]	Issues a call to phone number in phonebook memory storage **<mem>**, entry location **<n>** (available memories may be queried with **AT+CPBS=?**). If "**;**" is present a **voice** call is performed. Parameters: **<mem>** - phonebook memory storage SM - SIM phonebook FD - SIM fixed dialling-phonebook LD - SIM last-dialling-phonebook MC - device missed (unanswered received) calls list RC - ME received calls list **<n>** - entry location; it should be in the range of locations available in the memory used.
ATD><n>[;]	Issues a call to phone number in entry location **<n>** of the active phonebook

D – Dial	SELINT 0 / 1
	memory storage (see **+CPBS**). If ";" is present a **voice** call is performed. Parameter: **<n>** - active phonebook memory storage entry location; it should be in the range of locations available in the active phonebook memory storage.
ATDL	Issues a call to the last number dialed.
ATDS=<nr>[;]	Issues a call to the number stored in the MODULE internal phonebook position number **<nr>**. If ";" is present a VOICE call is performed. Parameter: **<nr>** - internal phonebook position to be called (See either **&N** and **&Z**)
ATD<number>I[;] **ATD<number>i[;]**	Issues a call overwriting the CLIR supplementary service subscription default value for this call If ";" is present a VOICE call is performed. **I** - invocation, restrict CLI presentation **i** - suppression, allow CLI presentation
ATD<number>G[;] **ATD<number>g[;]**	Issues a call checking the CUG supplementary service information for the current call. Refer to **+CCUG** command. If ";" is present a VOICE call is performed.
ATD*<gprs_sc> **[*<addr>][*[<L2P>]** **[*[<cid>]]]]#**	This command is specific of GPRS functionality and causes the MT to perform whatever actions are necessary to establish communication between the TE and the external PDN. Parameters: **<gprs_sc>** - GPRS Service Code, a digit string (value 99) which identifies a request to use the GPRS **<addr>** - string that identifies the called party in the address space applicable to the PDP. **<L2P>** - a string which indicates the layer 2 protocol to be used (see **+CGDATA** command). For communications software that does not support arbitrary characters in the dial string, the following numeric equivalents shall be used: 1 - PPP **<cid>** - a digit which specifies a particular PDP context definition (see **+CGDCONT** command).
Example	*To dial a number in SIM phonebook entry 6:* ATD>SM6 OK *To have a voice call to the 6-th entry of active phonebook:* ATD>6; OK *To call the entry with alphanumeric field* "Name"*:*

D – Dial	SELINT 0 / 1
	ATD>"Name"; OK
Reference	V25ter.

D – Dial	SELINT 2
ATD<number>[;]	Execution command starts a call to the phone number given as parameter. If "**;**" is present, a **voice** call to the given number is performed, regardless of the current value of the connection mode set by **+FCLASS** command. Parameter: **<number>** - phone number to be dialed Note: type of call (**data**, **fax** or **voice**) depends on last **+FCLASS** setting. Note: the numbers accepted are 0-9 and *,#,"A", "B", "C", "D","+". Note: for backwards compatibility with landline modems modifiers "T", "P", "R", ",", "W", "!", "@" are accepted but have no effect.
ATD><str>[;]	Issues a call to phone number which corresponding alphanumeric field is **<str>**; all available memories will be searched for the correct entry. If "**;**" is present a **voice** call is performed. Parameter: **<str>** - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks. Note: parameter **<str>** is case sensitive. Note: used character set should be the one selected with **+CSCS**.
ATD><mem><n>[;]	Issues a call to phone number in phonebook memory storage **<mem>**, entry location **<n>** (available memories may be queried with **AT+CPBS=?**). If "**;**" is present a **voice** call is performed. Parameters: **<mem>** - phonebook memory storage SM - SIM phonebook FD - SIM fixed dialling-phonebook LD - SIM last-dialling-phonebook MC - device missed (unanswered received) calls list RC - ME received calls list MB - mailbox numbers stored on SIM, if this service is provided by the SIM (see **#MBN**). **<n>** - entry location; it should be in the range of locations available in the memory used.
ATD><n>[;]	Issues a call to phone number in entry location **<n>** of the active phonebook

D – Dial	SELINT 2
	memory storage (see **+CPBS**). If "**;**" is present a **voice** call is performed. Parameter: **<n>** - active phonebook memory storage entry location; it should be in the range of locations available in the active phonebook memory storage.
ATDL	Issues a call to the last number dialed.
ATDS=<nr>[;]	Issues a call to the number stored in the MODULE internal phonebook position number **<nr>**. **If ";" is present a voice** call is performed. Parameter: **<nr>** - internal phonebook position to be called (See commands **&N** and **&Z**)
ATD<number>I[;] **ATD<number>i[;]**	Issues a call overwriting the CLIR supplementary service subscription default value for this call If "**;**" is present a **voice** call is performed. **I** - invocation, restrict CLI presentation **i** - suppression, allow CLI presentation
ATD<number>G[;] **ATD<number>g[;]**	Issues a call checking the CUG supplementary service information for the current call. Refer to **+CCUG** command. If "**;**" is present a **voice** call is performed.
ATD*<gprs_sc> **[*<addr>][*[<L2P>]** **[*[<cid>]]]]#**	This command is specific of GPRS functionality and causes the **MT** to perform whatever actions are necessary to establish communication between the **TE** and the external PDN. Parameters: **<gprs_sc>** - GPRS Service Code, a digit string (value 99) which identifies a request to use the GPRS **<addr>** - string that identifies the called party in the address space applicable to the PDP. **<L2P>** - a string which indicates the layer 2 protocol to be used (see **+CGDATA** command). For communications software that does not support arbitrary characters in the dial string, the following numeric equivalents shall be used: 1 - PPP **<cid>** - a digit which specifies a particular **PDP** context definition (see **+CGDCONT** command).
Example	*To dial a number in SIM phonebook entry 6:* ATD>SM6 OK *To have a voice call to the 6-th entry of active phonebook:* ATD>6; OK *To call the entry with alphanumeric field "Name":* ATD>"Name";

D – Dial	SELINT 2
	OK
Reference	V25ter.

3.5.3.3.2. Tone Dial - T

T - Tone Dial	SELINT 0 / 1 / 2
ATT	Set command has no effect is included only for backward compatibility with landline modems.
Reference	V25ter.

3.5.3.3.3. Pulse Dial - P

P - Pulse Dial	SELINT 0 / 1 / 2
ATP	Set command has no effect is included only for backward compatibility with landline modems.
Reference	V25ter.

3.5.3.3.4. Answer - A

A - Answer	SELINT 0 / 1 / 2
ATA	Execution command is used to answer to an incoming call if automatic answer is disabled. Note: This command MUST be the last in the command line and must be followed immediately by a **<CR>** character.
Reference	V25ter.

3.5.3.3.5. Disconnect - H

H - Disconnect	SELINT 0 / 1 / 2
ATH	Execution command is used to close the current conversation (voice, data or fax). Note: this command can be issued only in command mode; when a data conversation is active the device is in on-line mode (commands are not sensed and characters are sent to the other party), hence escape sequence (see **register S2**) is required before issuing this command, otherwise if **&D1** option is active, **DTR** pin has to be tied **Low** to return in command mode.
Reference	V25ter.

3.5.3.3.6. Return To On Line Mode - O

O - Return To On Line Mode	SELINT 0 / 1
ATO	Execution command is used to return to on-line mode from command mode. If there's no active connection it returns **ERROR**.

O - Return To On Line Mode	SELINT 0 / 1
	Note: After issuing this command, if the device is in conversation, to send other commands to the device you must return to command mode by issuing the escape sequence (see register **S2**) or tying low **DTR** pin if **&D1** option is active.
Reference	V25ter.

O - Return To On Line Mode	SELINT 2
ATO	Execution command is used to return to on-line mode from command mode. If there's no active connection it returns **NO CARRIER**. Note: After issuing this command, if the device is in conversation, to send other commands to the device you must return to command mode by issuing the escape sequence (see **register S2**) or tying low **DTR** pin if **&D1** option is active.
Reference	V25ter.

3.5.3.4. Modulation Control

3.5.3.4.1. Modulation Selection - +MS

+MS - Modulation Selection	SELINT 0 / 1 / 2
AT+MS= **<carrier>** **[,<automode>** **[,<min_rate>** **[,<max_rate>]]]**	Set command has no effect is included only for backward compatibility with landline modems. Parameters: **<carrier>** - a string which specifies the preferred modem carrier to use in originating or answering a connection V21 V22 V22B V23C V32 V34 **<automode>** - it enables/disables automatic modulation negotiation. 0 - disabled 1 - enabled. It has effect only if it is defined for the associated modulation. **<min_rate>** - it specifies the lowest value at which the **DCE** may establish a connection. 0 - unspecified **<max_rate>** - it specifies the highest value at which the **DCE** may establish a connection. 0 - unspecified 300..14400 - rate in bps Note: to change modulation requested use **+CBST** command.
AT+MS?	Read command returns the current value of **<carrier>**, **<automode>**, **<min_rate>**,

+MS - Modulation Selection	SELINT 0 / 1 / 2
	<max_rate> parameters.
AT+MS=?	Test command returns all supported values of the **<carrier>**, **<automode>**, **<min_rate>**, **<max_rate>** parameters.

3.5.3.4.2. Line Quality And Auto Retrain - %E

%E - Line Quality Monitor And Auto Retrain Or Fallback/Fallforward	SELINT 0 / 1 / 2
AT%E<n>	Execution command has no effect and is included only for backward compatibility with landline modems.

3.5.3.5. Compression Control

3.5.3.5.1. Data Compression - +DS

+DS - Data Compression	SELINT 0 / 1 / 2
AT+DS=[<n>]	Set command sets the V42 compression parameter. Parameter: **<n>** 0 - no compression, it is currently the only supported value; the command has no effect, and is included only for backward compatibility
AT+DS?	Read command returns current value of the data compression parameter.
AT+DS=?	Test command returns all supported values of the parameter **<n>**
Reference	V25ter

3.5.3.5.2. Data Compression Reporting - +DR

+DR - Data Compression Reporting	SELINT 0 / 1 / 2
AT+DR=<n>	Set command enables/disables the data compression reporting upon connection. Parameter: **<n>** 0 - data compression reporting disabled; 1 - data compression reporting enabled upon connection. Note: if enabled, the following intermediate result code is transmitted before the final result code: **+DR: <compression>** (the only supported value for **<compression>** is "**NONE**")
AT+DR?	Read command returns current value of **<n>**.
AT+DR=?	Test command returns all supported values of the parameter **<n>**
Reference	V25ter

3.5.3.6. S Parameters

Basic commands that begin with the letter "**S**" are known as "**S-Parameters**". The number following the "**S**" indicates the "parameter number" being referenced. If the number is not recognized as a valid parameter number, an **ERROR** result code is issued.

If no value is given for the sub parameter of an **S-Parameter**, an **ERROR** result code will be issued and the stored value left unchanged.

Reference: V25ter

3.5.3.6.1. Number Of Rings To Auto Answer - S0

S0 - Number Of Rings To Auto Answer	**SELINT 0 / 1**
ATS0[=<n>]	Set command sets the number of rings required before device automatically answers an incoming call. Parameter: **<n>** - number of rings 0 - auto answer disabled (factory default) 1..255 - number of rings required before automatic answer.
ATS0?	Read command returns the current value of **S0** parameter.
ATS0=?	Test command returns the range for **<n>** without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Note	Automatically answer is not enabled if current instance is in online mode
Reference	V25ter

S0 - Number Of Rings To Auto Answer	**SELINT 2**
ATS0=[<n>]	Set command sets the number of rings required before device automatically answers an incoming call. Parameter: **<n>** - number of rings 0 - auto answer disabled (factory default) 1..255 - number of rings required before automatic answer.
ATS0?	Read command returns the current value of **S0 parameter**.
Reference	V25ter

3.5.3.6.2. Ring Counter - S1

S1 - Ring Counter	**SELINT 0 / 1**
ATS1	**S1** is incremented each time the device detects the ring signal of an incoming call. **S1** is cleared as soon as no ring occur.

S1 - Ring Counter	SELINT 0 / 1
	Note: the form **ATS1** has no effect.
ATS1?	Read command returns the value of **S1** ring counter.
ATS1=?	Test command returns the range of values for **S1** ring counter without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

S1 - Ring Counter	SELINT 2
ATS1	**S1** is incremented each time the device detects the ring signal of an incoming call. **S1** is cleared as soon as no ring occur. Note: the form **ATS1** has no effect.
ATS1?	Read command returns the value of this parameter.

3.5.3.6.3. Escape Character - S2

S2 - Escape Character	SELINT 0 / 1
ATS2[=<char>]	Set command sets the ASCII character to be used as escape character. Parameter: **<char>** - escape character decimal ASCII 0..255 - factory default value is 43 (+). Note: the escape sequence consists of three escape characters preceded and followed by ***n*** ms of idle (see **S12** to set ***n***).
ATS2?	Read command returns the current value of **S2** parameter.
ATS2=?	Test command returns the range for **<char>** without command echo and parenthesis
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

S2 - Escape Character	SELINT 2
ATS2=[<char>]	Set command sets the ASCII character to be used as escape character. Parameter: **<char>** - escape character decimal ASCII 0..255 - factory default value is 43 (+). Note: the escape sequence consists of three escape characters preceded and followed by ***n*** ms of idle (see **S12** to set ***n***).
ATS2?	Read command returns the current value of **S2** parameter. Note: the format of the numbers in output is always 3 digits, left-filled with 0s

3.5.3.6.4. Command Line Termination Character - S3

S3 - Command Line Termination Character	SELINT 0 / 1
ATS3[=<char>]	Set command sets the value of the character either recognized by the device as command line terminator and generated by the device as part of the header, trailer, and terminator for result codes and information text, along with **S4** parameter. Parameter: **<char>** - command line termination character (decimal ASCII) 0..127 - factory default value is 13 (ASCII **CR**) Note: the "previous" value of **S3** is used to determine the command line termination character for entering the command line containing the **S3** setting command. However the result code issued shall use the "new" value of **S3** (as set during the processing of the command line).
ATS3?	Read command returns the current value of **S3** parameter.
ATS3=?	Test command returns the range for **<char>** without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

S3 - Command Line Termination Character	SELINT 2
ATS3=[<char>]	Set command sets the value of the character either recognized by the device as command line terminator and generated by the device as part of the header, trailer, and terminator for result codes and information text, along with **S4 parameter**. Parameter: **<char>** - command line termination character (decimal ASCII) 0..127 - factory default value is 13 (ASCII **<CR>**) Note: the "previous" value of **S3** is used to determine the command line termination character for entering the command line containing the **S3** setting command. However the result code issued shall use the "new" value of **S3** (as set during the processing of the command line)
ATS3?	Read command returns the current value of **S3 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

3.5.3.6.5. Response Formatting Character - S4

S4 - Response Formatting Character	SELINT 0 / 1
ATS4[=<char>]	Set command sets the value of the character generated by the device as part of the header, trailer, and terminator for result codes and information text, along with the **S3** parameter.

S4 - Response Formatting Character	SELINT 0 / 1
	Parameter: <**char**> - response formatting character (decimal ASCII) 0..127 - factory default value is 10 (ASCII **LF**) Note: if the value of **S4** is changed in a command line the result code issued in response of that command line will use the new value of **S4**.
ATS4?	Read command returns the current value of **S4** parameter.
ATS4=?	Test command returns the range for <**char**> without command echo and parenthesis
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

S4 - Response Formatting Character	SELINT 2
ATS4=[<char>]	Set command sets the value of the character generated by the device as part of the header, trailer, and terminator for result codes and information text, along with the **S3 parameter**. Parameter: <**char**> - response formatting character (decimal ASCII) 0..127 - factory default value is 10 (ASCII **LF**) Note: if the value of **S4** is changed in a command line the result code issued in response of that command line will use the new value of **S4**.
ATS4?	Read command returns the current value of S4 parameter. Note: the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

3.5.3.6.6. Command Line Editing Character - S5

S5 - Command Line Editing Character	SELINT 0 / 1
ATS5[=<char>]	Set command sets the value of the character recognized by the device as a request to delete from the command line the immediately preceding character. Parameter: <**char**> - command line editing character (decimal ASCII) 0..127 - factory default value is 8 (ASCII **BS**).
ATS5?	Read command returns the current value of **S5** parameter.
ATS5=?	Test command returns the range for <**char**> without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

S5 - Command Line Editing Character	SELINT 2
ATS5=[<char>]	Set command sets the value of the character recognized by the device as a request to delete from the command line the immediately preceding character. Parameter: **<char>** - command line editing character (decimal ASCII) 0..127 - factory default value is 8 (ASCII **BS**)
ATS5?	Read command returns the current value of **S5 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

3.5.3.6.7. Connection Completion Time-Out - S7

S7 - Connection Completion Time-Out	SELINT 0 / 1
ATS7[=<tout>]	Set command sets the amount of time, in seconds, that the device shall allow between either answering a call (automatically or by **A** command) or completion of signalling of call addressing information to network (dialling), and establishment of a connection with the remote device. Parameter: **<tout>** - number of seconds 1..255 - factory default value is 60.
ATS7?	Read command returns the current value of **S7** parameter.
ATS7=?	Test command returns the range for **<tout>** without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

S7 - Connection Completion Time-Out	SELINT 2
ATS7=[<tout>]	Set command sets the amount of time, in seconds, that the device shall allow between either answering a call (automatically or by **A** command) or completion of signalling of call addressing information to network (dialling), and establishment of a connection with the remote device. Parameter: **<tout>** - number of seconds 1..255 - factory default value is 60
ATS7?	Read command returns the current value of **S7 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s
Reference	V25ter

3.5.3.6.8. Carrier Off With Firm Time - S10

S10 –Carrier Off With Firm Time	SELINT 0 / 1 / 2
ATS10	Execution command has no effect and is included only for backward compatibility with landline modems

3.5.3.6.9. Escape Prompt Delay - S12

S12 - Escape Prompt Delay	SELINT 0 / 1
ATS12[=<time>]	Set command sets: 1) the minimum period, before receipt of the first character of the three escape character sequence, during which no other character has to be detected in order to accept it as valid first character; 2) the maximum period allowed between receipt of first, or second, character of the three escape character sequence and receipt of the next; 3) the minimum period, after receipt of the last character of the three escape character sequence, during which no other character has to be detected in order to accept the escape sequence as a valid one. Parameter: **<time>** - expressed in fiftieth of a second 20..255 - factory default value is 50. Note: after **CONNECT** result code it is possible to accept the first character of the three escape character sequence without having to wait for a minimum period to be passed.
ATS12?	Read command returns the current value of **S12** parameter.
ATS12=?	Test command returns the range for **<time>** without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

S12 - Escape Prompt Delay	SELINT 2
ATS12=[<time>]	Set command sets: 1) the minimum period, before receipt of the first character of the three escape character sequence, during which no other character has to be detected in order to accept it as valid first character; 2) the maximum period allowed between receipt of first or second character of the three escape character sequence and receipt of the next; 3) the minimum period, after receipt of the last character of the three escape character sequence, during which no other character has to be detected in order to accept the escape sequence as a valid one. Parameter: **<time>** - expressed in fiftieth of a second 2..255 - factory default value is 50.

S12 - Escape Prompt Delay	SELINT 2
	Note: the minimum period **S12** has to pass after **CONNECT** result code too, before a received character is accepted as valid first character of the three escape character sequence.
ATS12?	Read command returns the current value of **S12 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s

3.5.3.6.10. Delay To DTR Off - S25

S25 - Delay To DTR Off	SELINT 0 / 1
ATS25[=<time>]	Set command defines the amount of time, in hundredths of second, that the device will ignore the **DTR** for taking the action specified by command **&D**. Parameter: **<time>** - expressed in hundredths of a second 0..255 - factory default value is 5. Note: the delay is effective only if its value is greater than 5.
ATS25?	Read command returns the current value of **S25** parameter.
ATS25=?	Test command returns the range for **<time>** without command echo and parenthesis. Note: the output depends on the choice made through **#SELINT** command.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

S25 -Delay To DTR Off	SELINT 2
ATS25=[<time>]	Set command defines the amount of time, in hundredths of second, that the device will ignore the **DTR** for taking the action specified by command **&D**. Parameter: **<time>** - expressed in hundredths of a second 0..255 - factory default value is 5. Note: the delay is effective only if its value is greater than 5.
ATS25?	Read command returns the current value of **S25 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s

3.5.3.6.11. Disconnect Inactivity Timer - S30

S30 - Disconnect Inactivity Timer	SELINT 0 / 1
ATS30[=<tout>]	Set command defines the inactivity time-out in minutes. The device disconnects if no characters are exchanged for a time period of at least **<tout>** minutes.

S30 - Disconnect Inactivity Timer	SELINT 0 / 1
	Parameter: <**tout**> - expressed in minutes 0 - disabled, disconnection due to inactivity is disabled (factory default). 1..255 - inactivity time-out value.
ATS30?	Read command returns the current value of **S30** parameter.
ATS30=?	Test command returns the range for <**tout**> without command echo and parenthesis. Note: the output depends on the choice made through **#SELINT** command.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

S30 -Disconnect Inactivity Timer	SELINT 2
ATS30=[<tout>]	Set command defines the inactivity time-out in minutes. The device disconnects if no characters are exchanged for a time period of at least <**tout**> minutes. Parameter: <**tout**> - expressed in minutes 0 - disabled, disconnection due to inactivity is disabled (factory default). 1..127 - inactivity time-out value
ATS30?	Read command returns the current value of **S30 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s

3.5.3.6.12. Delay Before Forced Hang Up - S38

S38 -Delay Before Forced Hang Up	SELINT 0 / 1
ATS38[=<delay>]	Set command sets the delay, in seconds, between the device's receipt of **H** command (or **ON**-to-**OFF** transition of **DTR** if device is programmed to follow the signal) and the disconnect operation. Parameter: <**delay**> - expressed in seconds 0..254 - the device will wait <**delay**> seconds for the remote device to acknowledge all data in the device buffer before disconnecting (factory default value is 0). 255 - the device doesn't time-out and continues to deliver data in the buffer until the connection is lost or the data is delivered. Note: <**delay**> parameter can be used to ensure that data in device buffer is sent before device disconnects.
ATS38?	Read command returns the current value of **S38** parameter.
ATS38=?	Test command returns the range of supported values for <**delay**> without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3

S38 -Delay Before Forced Hang Up	SELINT 0 / 1
	digits, left-filled with 0s

S38 -Delay Before Forced Hang Up	SELINT 2
ATS38=[<delay>]	Set command sets the delay, in seconds, between the device's receipt of **H** command (or **ON**-to-**OFF** transition of **DTR**) and the disconnect operation. Parameter: **<delay>** - acknowledge timer in units of seconds 0..254 - the device will wait **<delay>** seconds for the remote device to acknowledge all data in the device buffer before disconnecting (factory default value is 0). 255 - the device doesn't time-out and continues to attempt to deliver data in the buffer until the connection is lost or the data is delivered. Note: **<delay>** parameter can be used to ensure that data in device buffer is sent before device disconnects.
ATS38?	Read command returns the current value of **S38 parameter**. Note: the format of the numbers in output is always 3 digits, left-filled with 0s

3.5.4. 3GPP TS 27.007 AT Commands

3.5.4.1. General

3.5.4.1.1. Request Manufacturer Identification - +CGMI

+CGMI - Request Manufacturer Identification	**SELINT 0 / 1**
AT+CGMI	Execution command returns the device manufacturer identification code without command echo. The output depends on the choice made through **#SELINT** command.
AT+CGMI?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

+CGMI - Request Manufacturer Identification	**SELINT 2**
AT+CGMI	Execution command returns the device manufacturer identification code without command echo. The output depends on the choice made through **#SELINT** command.
AT+CGMI=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007

3.5.4.1.2. Request Model Identification - +CGMM

+CGMM - Request Model Identification	**SELINT 0 / 1**
AT+CGMM	Execution command returns the device model identification code without command echo.
Reference	3GPP TS 27.007

+CGMM - Request Model Identification	**SELINT 2**
AT+CGMM	Execution command returns the device model identification code without command echo.
AT+CGMM=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007

3.5.4.1.3. Request Revision Identification - +CGMR

+CGMR - Request Revision Identification	**SELINT 0 / 1**
AT+CGMR	Execution command returns device software revision number without command echo.
AT+CGMR?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

+CGMR - Request Revision Identification	**SELINT 2**
AT+CGMR	Execution command returns device software revision number without command echo.
AT+CGMR=?	Test command returns **OK** result code.

+CGMR - Request Revision Identification	SELINT 2
Reference	3GPP TS 27.007

3.5.4.1.4. Request Product Serial Number Identification - +CGSN

+CGSN - Request Product Serial Number Identification	SELINT 0 / 1
AT+CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, without command echo.
AT+CGSN?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

+CGSN - Request Product Serial Number Identification	SELINT 2
AT+CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, without command echo.
AT+CGSN=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007

3.5.4.1.5. Select TE Character Set - +CSCS

+CSCS - Select TE Character Set	SELINT 0 / 1
AT+CSCS [=<chset>]	Set command sets the current character set used by the device. Parameter: **<chset>** - character set "IRA" - ITU-T.50 "8859-1" - ISO 8859 Latin 1 "PCCP437" - PC character set Code Page 437. "UCS2" - 16-bit universal multiple-octet coded character set (ISO/IEC10646) Note: If parameter is omitted then the behaviour of Set command is the same as Read command.
AT+CSCS?	Read command returns the current value of the active character set.
AT+CSCS=?	Test command returns the supported values of the parameter **<chset>**. For compatibility with previous versions, Test command returns **+CSCS: ("IRA")** An enhanced version of Test command has been defined: **AT+CSCS=??**, that provides the complete range of values for **<chset>**.
AT+CSCS=??	Enhanced test command returns the supported values of the parameter **<chset>**
Reference	3GPP TS 27.007

+CSCS - Select TE Character Set	SELINT 2
AT+CSCS= [<chset>]	Set command sets the current character set used by the device. Parameter:

+CSCS - Select TE Character Set	SELINT 2
	<chset> - character set "GSM" - GSM default alphabet (3GPP TS 23.038) "IRA" - international reference alphabet (ITU-T T.50) "8859-1" - ISO 8859 Latin 1 character set "PCCP437" - PC character set Code Page 437 "UCS2" - 16-bit universal multiple-octet coded character set (ISO/IEC10646) "HEX" - Character strings consist only of hexadecimal numbers from 00 to FF; e.g. "032FE6" equals three 8-bit characters with decimal values 3, 47 and 230; no conversions to the original MT character set shall be done. If MT is using GSM 7 bit default alphabet, its characters shall be padded with 8th bit (zero) before converting them to hexadecimal numbers (i.e. no SMS-style packing of 7-bit alphabet). Note: "HEX" character set can only be used in #SMSMODE=1 mode (see #SMSMODE command). If current character set is "HEX", and #SMSMODE is set to 0, the character set will be restored to "IRA". If current #SMSMODE is set to 0, it is not possible to set "HEX" character set.
AT+CSCS?	Read command returns the current value of the active character set.
AT+CSCS=?	Test command returns the supported values for parameter **<chset>**.
Reference	3GPP TS 27.007

3.5.4.1.6. International Mobile Subscriber Identity (IMSI) - +CIMI

+CIMI - Request International Mobile Subscriber Identify (IMSI)	SELINT 0 / 1
AT+CIMI	Execution command returns the value of the Internal Mobile Subscriber Identity stored in the SIM without command echo. Note: a SIM card must be present in the SIM card housing, otherwise the command returns **ERROR**.
AT+CIMI?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

+CIMI - Request International Mobile Subscriber Identify (IMSI)	SELINT 2
AT+CIMI	Execution command returns the value of the Internal Mobile Subscriber Identity stored in the SIM without command echo. Note: a SIM card must be present in the SIM card housing, otherwise the command returns **ERROR**.
AT+CIMI=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007

3.5.4.1.7. Multiplexing Mode - +CMUX

+CMUX - Multiplexing Mode	SELINT 2
AT+CMUX= **<mode>** **[,<subset>** **[,<port_speed>** **[,<N1>** **]]]**	Set command is used to enable/disable the 3GPP TS 27.010 multiplexing protocol control channel. Parameters: **<mode>** multiplexer transparency mechanism 0 - basic option; it is currently the only supported value. **<subset>** 0 - UIH frames used only; it is currently the only supported value. **<port_speed >** 2 – 19200 bps 3 – 38400 bps 4 – 57600 bps 5 – 115200 bps **<N1>** max frame size, it indicates the maximum lenght of the information field of CMUX frame (point 5.7.2 of 3GPP TS 07.10) 1 to MaxFrameSize Note: after entering the ***Multiplexed Mode*** an inactive timer of five seconds starts. If no CMUX control channel is established before this inactivity timer expires the engine returns to ***AT Command Mode*** Note: CMUX cannot work with the automatic speed detection; the speed must be set with AT+IPR=<rate> (before sending AT+CMUX) or using the 3rd parameter **<port_speed>**. If the **<port_speed>** parameter has been used, the speed will be changed after the OK (response to AT+CMUX). At the end of the CMUX session the IPR preserve the value set with **<port_speed>**. To be sure that the firmware supports this feature, check it with the test command. Note: all the CMUX protocol parameters are fixed as defined in GSM07.10 and cannot be changed. The parameter **<N1>** is not supported by all products or software version; to be sure check it with the test command. If **<N1>** is not supported or not used it will be set to the default value. Note: the default max frame size is: **N1=127**; using this configuration, the largest allowed CMUX frame (including start and end flag) is 133 bytes long. **Note: to set a N1 greater then 127, it is mandatory to configure the module using the command AT#CPUMODE=3**
AT+CMUX?	Read command returns all the current values of the parameters in the format:

	+CMUX: <mode>,<subset>,<port_speed>,<N1> Note: the **<port_speed>** will be reported only if it has a supported value.
AT+CMUX=?	Test command returns the range of supported values for parameters **<mode>**, **<subset>**, **<port_speed>** and **<N1>**.
Reference	3GPP TS 27.007, 3GPP TS 27.010, 3GPP TS 07.10

3.5.4.1.8. Select Wireless Network - +WS46

+WS46 - PCCA STD-101 Select Wireless Network	**SELINT 2**
AT+WS46=[<n>]	Set command selects the cellular network (Wireless Data Service, WDS) to operate with the **TA** (WDS-Side Stack Selection). Parameter: **<n>** - integer type, it is the WDS-Side Stack to be used by the **TA**. 12 - GSM digital cellular
AT+WS46?	Read command reports the currently selected cellular network, in the format: **+ WS46: <n>**
AT+WS46=?	Test command reports the range for the parameter **<n>**.
Reference	3GPP TS 27.007

3.5.4.1.9. Select preferred MT power class - +CPWC

+CPWC – Select preferred MT power class	**SELINT 2**
AT+CPWC= **[<class>** **[,<band>]]**	The set command is used to select the preferred MT power class for each GSM frequency band supported. **<class>:** numeric parameter which indicates the power class preference to be used; its possible values are: 0 - default power class for the relevant band 1, 2 - allowable power classes on DCS1800 and PCS1900 bands; 4, 5 - allowable power classes on GSM900 and GSM850 bands; **<band>:** numeric parameter which indicates the band to apply the power class setting; its possible values are: 0 - GSM900 and GSM850; 1 - DCS1800; 2 - PCS1900; Using this command is possible to reduce the Nominal Maximum output power according to the following tables: **GSM900 and GSM850**

	<table><tr><th>Power class</th><th>Nominal Maximum output power</th></tr><tr><td>4 (default)</td><td>2 W (33 dBm)</td></tr><tr><td>5</td><td>0,8 W (29 dBm)</td></tr></table> **DCS1800** <table><tr><th>Power class</th><th>Nominal Maximum output power</th></tr><tr><td>1 (default)</td><td>1 W (30 dBm)</td></tr><tr><td>2</td><td>0,25 W (24 dBm)</td></tr></table> **PCS1900** <table><tr><th>Power class</th><th>Nominal Maximum output power</th></tr><tr><td>1 (default)</td><td>1 W (30 dBm)</td></tr><tr><td>2</td><td>0,25 W (24 dBm)</td></tr></table> Note: it is advisable to use this command for reducing power consumption when the received signal strength is high (about -70 dBm) and the module is working in static conditions. Note: if **<class>** is given but **<band>** is left out, the power class setting is applied to GSM900 and GSM850 bands. Note: the setting is saved in NVM (and available on following reboot).
AT+CPWC?	The read command returns the currently output power class and default output power class for each supported frequency band in the format: **+CPWC: <curr_class1>,<def_class1>,<band1>** **[,<curr_class2>,<def_class2>,<band2>[…]]** Note: **<band1>** parameter and its associated power class parameters refer to the currently used frequency band.
AT+CPWC=?	Test command returns supported bands and their power classes in the format: **+CPWC: list of supported (<band> , (list of <class>s)) pairs**
Reference	3GPP TS 27.007 and GSM 05.05

3.5.4.2. Call Control

3.5.4.2.1. Hang Up Call - +CHUP

+CHUP - Hang Up Call	SELINT 0 / 1 / 2
AT+CHUP	Execution command cancels all active and held calls, also if a multi-party session is running.
AT+CHUP=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.2.2. Select Bearer Service Type - +CBST

+CBST - Select Bearer Service Type	SELINT 0 / 1
AT+CBST **[=<speed>** **[,<name>** **[,<ce>]]]**	Set command sets the bearer service **<name>** with data rate **<speed>**, and the connection element **<ce>** to be used when data calls are originated. This setting is also used during mobile terminated data call setup, in case of single numbering scheme calls (refer **+CSNS**). Parameters: **<speed>** - data rate 0 - autobauding (automatic selection of the speed, factory default) 1 - 300 bps (V.21) 2 - 1200 bps (V.22) 3 - 1200/75 bps (V.23) 4 - 2400 bps (V.22bis) 6 - 4800 bps (V.32) 7 - 9600 bps (V.32) 14 - 14400 bps (V.34) 65 - 300 bps (V.110) 66 - 1200 bps (V.110) 68 - 2400 bps (V.110 or X.31 flag stuffing) 70 - 4800 bps (V.110 or X.31 flag stuffing) 71 - 9600 bps (V.110 or X.31 flag stuffing) 75 - 14400 bps (V110 or X.31 flag stuffing) **<name>** - bearer service name 0 - data circuit asynchronous (factory default) **<ce>** - connection element 0 - transparent 1 - non transparent (default) Note: the settings **AT+CBST=0,0,0** **AT+CBST=14,0,0** **AT+CBST=75,0,0** are not supported.

+CBST - Select Bearer Service Type	SELINT 0 / 1
	Note: If all parameters are omitted then the behaviour of Set command is the same as Read command. Note: the following settings are recommended **AT+CBST=71,0,1** for mobile-to-mobile calls **AT+CBST=7,0,1** for mobile-to-fix calls
AT+CBST?	Read command returns current value of the parameters **<speed>**, **<name>** and **<ce>**
AT+CBST=?	Test command returns the supported range of values for the parameters.
Reference	3GPP TS 27.007

+CBST - Select Bearer Service Type	SELINT 2
AT+CBST= **[<speed>** **[,<name>** **[,<ce>]]]**	Set command sets the bearer service **<name>** with data rate **<speed>**, and the connection element **<ce>** to be used when data calls are originated. This setting is also used during mobile terminated data call setup, in case of single numbering scheme calls (refer **+CSNS**). Parameters: **<speed>** - data rate 0 - autobauding (automatic selection of the speed, factory default) 1 - 300 bps (V.21) 2 - 1200 bps (V.22) 3 - 1200/75 bps (V.23) 4 - 2400 bps (V.22bis) 6 - 4800 bps (V.32) 7 - 9600 bps (V.32) 14 - 14400 bps (V.34) 65 - 300 bps (V.110) 66 - 1200 bps (V.110) 68 - 2400 bps (V.110 or X.31 flag stuffing) 70 - 4800 bps (V.110 or X.31 flag stuffing) 71 - 9600 bps (V.110 or X.31 flag stuffing) 75 - 14400 bps (V110 or X.31 flag stuffing) **<name>** - bearer service name 0 - data circuit asynchronous (factory default) **<ce>** - connection element 0 - transparent 1 - non transparent (default) Note: the settings **AT+CBST=0,0,0** **AT+CBST=14,0,0** **AT+CBST=75,0,0** are not supported. Note: the following settings are recommended

+CBST - Select Bearer Service Type	SELINT 2
	AT+CBST=71,0,1 for mobile-to-mobile calls **AT+CBST=7,0,1** for mobile-to-fix calls
AT+CBST?	Read command returns current value of the parameters **<speed>**, **<name>** and **<ce>**
AT+CBST=?	Test command returns the supported range of values for the parameters.
Reference	3GPP TS 27.007

3.5.4.2.3. Radio Link Protocol - +CRLP

+CRLP - Radio Link Protocol	SELINT 0 / 1 / 2
AT+CRLP=[<iws>[,<mws>[,<T1>[,<N2>[,<ver>]]]]]	Set command sets Radio Link Protocol (RLP) parameters used when non-transparent data calls are originated Parameters: **<iws>** - IWF window Dimension 1..61 - factory default value is 61 **<mws>** - MS window Dimension 1..61 - default value is 61 **<T1>** - acknowledge timer (10 ms units). 39..255 - default value is 78 **<N2>** - retransmission attempts 1..255 - default value is 6 **<ver>** - protocol version 0
AT+CRLP?	Read command returns the current value of the RLP protocol parameters.
AT+CRLP=?	Test command returns supported range of values of the RLP protocol parameters.
Reference	3GPP TS 27.007

3.5.4.2.4. Service Reporting Control - +CR

+CR - Service Reporting Control	SELINT 0 / 1 / 2
AT+CR=[<mode>]	Set command controls whether or not intermediate result code **+CR** is returned from **TA** to **TE**. Parameter: **<mode>** 0 - disables **+CR** reporting (factory default) 1 - enables **+CR** reporting: the intermediate result code is transmitted at the point during connect negotiation at which the **TA** has determined which speed and quality of service will be used, before any error control or data compression

+CR - Service Reporting Control	SELINT 0 / 1 / 2
	reports are transmitted, and before the intermediate result code **CONNECT** is transmitted. Its format is: **+CR: <serv>** where: **<serv>** ASYNC - asynchronous transparent SYNC - synchronous transparent REL ASYNC - asynchronous non-transparent REL SYNC - synchronous non-transparent. Note: this command replaces V.25ter [14] command Modulation Reporting Control (**+MR**), which is not appropriate for use with a GSM terminal.
AT+CR?	Read command returns whether or not intermediate result code **+CR** is enabled, in the format: **+CR: <mode>**
AT+CR=?	Test command returns the supported range of values of parameter **<mode>**.
Reference	3GPP TS 27.007

3.5.4.2.5. Extended Error Report - +CEER

+CEER - Extended Error Report	SELINT 0 / 1
AT+CEER	Execution command returns one or more lines of information text **<report>** offering the TA user an extended error report, in the format: **+CEER: <report>** This report regards some error condition that may occur: • the failure in the last unsuccessful call setup (originating or answering) • the last call release Note: if none of the previous conditions has occurred since power up then **"No error"** condition is reported
AT+CEER?	Read command reports a information text regarding some error condition that may occur
AT+CEER=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007, GSM 04.08

+CEER - Extended Error Report	SELINT 2
AT+CEER	Execution command returns one or more lines of information text **<report>** offering the TA user an extended error report, in the format: **+CEER: <report>**

+CEER - Extended Error Report	SELINT 2
	This report regards some error condition that may occur: • the failure in the last unsuccessful call setup (originating or answering) • the last call release Note: if none of the previous conditions has occurred since power up then **"Normal, unspecified"** condition is reported
AT+CEER=?	Test command returns **OK** result code.
Reference	3GPP TS 27.007, GSM 04.08

3.5.4.2.6. Cellular Result Codes - +CRC

+CRC - Cellular Result Codes	SELINT 0 / 1
AT+CRC=<mode>	Set command controls whether or not the extended format of incoming call indication is used. Parameter: **<mode>** 0 - disables extended format reporting (factory default) 1 - enables extended format reporting When enabled, an incoming call is indicated to the **TE** with unsolicited result code: **+CRING:<type>** instead of the normal **RING**. where **<type>** - call type: DATA FAX - facsimile (TS 62) VOICE - normal voice (TS 11)
AT+CRC?	Read command returns current value of the parameter **<mode>**.
AT+CRC=?	Test command returns supported values of the parameter **<mode>**.
Reference	3GPP TS 27.007

+CRC - Cellular Result Codes	SELINT 2
AT+CRC= [<mode>]	Set command controls whether or not the extended format of incoming call indication is used. Parameter: **<mode>** 0 - disables extended format reporting (factory default) 1 - enables extended format reporting:

+CRC - Cellular Result Codes	SELINT 2
	When enabled, an incoming call is indicated to the **TE** with unsolicited result code **+CRING: <type>** instead of the normal **RING**. where **<type>** - call type: ASYNC - asynchronous transparent data SYNC - synchronous transparent data REL ASYNC - asynchronous non-transparent data REL SYNC - synchronous non-transparent data FAX - facsimile (TS 62) VOICE - normal voice (TS 11)
AT+CRC?	Read command returns current value of the parameter **<mode>**.
AT+CRC=?	Test command returns supported values of the parameter **<mode>**.
Reference	3GPP TS 27.007

3.5.4.2.7. Single Numbering Scheme - +CSNS

+CSNS - Single Numbering Scheme	SELINT 0 / 1 / 2
AT+CSNS= [<mode>]	Set command selects the bearer to be used when no bearer capability information is provided within a mobile terminated call. The command has to be set before the call comes. Parameter values set with **+CBST** command shall be used when **<mode>** equals to a data service. Parameter: **<mode>** 0 - voice (factory default) 2 - fax (TS 62) 4 - data Note: if **+CBST** parameter is set to a value that is not applicable to single numbering calls, ME/TA shall map the value to the closest valid one. E.g. if user has set **<speed>=71**, **<name>=0** and **<ce>=1** (non-transparent asynchronous 9600 bps V.110 ISDN connection) for mobile originated calls, ME/TA shall map the values into non-transparent asynchronous 9600 bps V.32 modem connection when single numbering scheme call is answered.
AT+CSNS?	Read command returns current value of the parameter **<mode>**.
AT+CSNS=?	Test command returns supported values of parameter **<mode>**.
Reference	3GPP TS 27.007

3.5.4.2.8. Voice Hang Up Control - +CVHU

+CVHU - Voice Hang Up Control	SELINT 0 / 1
AT+CVHU[=<mode>]	Set command selects whether **ATH** or "**drop DTR**" shall cause a voice connection to be disconnected or not. Parameter: **<mode>** 0 - "**Drop DTR**" ignored but **OK** result code given. **ATH** disconnects. 1 - "**Drop DTR**" and **ATH** ignored but **OK** result code given. 2 - "**Drop DTR**" behaviour according to **&D** setting. **ATH** disconnects (factory default). Note: if parameter **<mode>** is omitted the behaviour of Set command is the same as Read command.
AT+CVHU?	Read command reports the current value of the **<mode>** parameter, **+CVHU: <mode>**
AT+CVHU=?	Test command reports the range of supported values for parameter **<mode>**

+CVHU - Voice Hang Up Control	SELINT 2
AT+CVHU=[<mode>]	Set command selects whether **ATH** or "**drop DTR**" shall cause a voice connection to be disconnected or not. Parameter: **<mode>** 0 - "**Drop DTR**" ignored but **OK** result code given. **ATH** disconnects. 1 - "**Drop DTR**" and **ATH** ignored but **OK** result code given. 2 - "**Drop DTR**" behaviour according to **&D** setting. **ATH** disconnects (factory default).
AT+CVHU?	Read command reports the current value of the **<mode>** parameter, in the format: **+CVHU: <mode>**
AT+CVHU=?	Test command reports the range of supported values for parameter **<mode>**

3.5.4.3. Network Service Handling

3.5.4.3.1. Subscriber Number - +CNUM

+CNUM - Subscriber Number	SELINT 0 / 1
AT+CNUM	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format: **+CNUM: <number>,<type>** where **<number>** - string containing the phone number in the format **<type>**

+CNUM - Subscriber Number	SELINT 0 / 1
	<type> - type of number: 129 - national numbering scheme 145 - international numbering scheme (contains the character "+").
Reference	3GPP TS 27.007

+CNUM - Subscriber Number	SELINT 2
AT+CNUM	If the ENS functionality has not been previously enabled (see **#ENS**) Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format: **+CNUM: <alpha>,<number>,<type>** If the ENS functionality has been previously enabled (see **#ENS**) Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format: **+CNUM: <alpha>,<number>,<type>[<CR><LF>** **+CNUM: <alpha>,<number>,<type>[…]]** where: **<alpha>** - alphanumeric string associated to **<number>**; used character set should be the one selected with **+CSCS**. **<number>** - string containing the phone number in the format **<type>** **<type>** - type of number: 129 - national numbering scheme 145 - international numbering scheme (contains the character "+"). Note: in 13.00.xxx SW release the behaviour doesn't depend on ENS functionality and corresponds to the case when the ENS functionality is enabled.
AT+CNUM=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.3.2. Read Operator Names - +COPN

+COPN - Read Operator Names	SELINT 0 / 1
AT+COPN	Execution command returns the list of operator names from the **ME** in the format: **+COPN: <numeric1>,<alpha1>[<CR><LF><CR><LF>** **+COPN: <numeric2>,<alpha2>[…]]** where: **<numeric*n*>** - string type, operator in numeric format (see **+COPS**) **<alpha*n*>** - string type, operator in long alphanumeric format (see **+COPS**) Note: each operator code **<numeric*n*>** that has an alphanumeric equivalent **<alpha*n*>** in the ME memory is returned
Reference	3GPP TS 27.007

+COPN - Read Operator Names	SELINT 2
AT+COPN	Execution command returns the list of operator names from the **ME** in the format: **+COPN: <numeric1>,<alpha1>[<CR><LF>** **+COPN: <numeric2>,<alpha2>[…]]** where: **<numeric*n*>** - string type, operator in numeric format (see **+COPS**) **<alpha*n*>** - string type, operator in long alphanumeric format (see **+COPS**) Note: each operator code **<numeric*n*>** that has an alphanumeric equivalent **<alpha*n*>** in the ME memory is returned
AT+COPN=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.3.3. Network Registration Report - +CREG

+CREG - Network Registration Report	SELINT 0 / 1
AT+CREG[= [<mode>]]	Set command enables/disables network registration reports depending on the parameter **<mode>**. Parameter: **<mode>** 0 - disable network registration unsolicited result code (factory default) 1 - enable network registration unsolicited result code 2 - enable network registration unsolicited result code with network Cell identification data If **<mode>=1**, network registration result code reports: **+CREG: <stat>**

+CREG - Network Registration Report	SELINT 0 / 1
	where **<stat>** 0 - not registered, ME is not currently searching a new operator to register to 1 - registered, home network 2 - not registered, but ME is currently searching a new operator to register to 3 - registration denied 4 -unknown 5 - registered, roaming If **<mode>=2**, network registration result code reports: **+CREG: <stat>[,<Lac>,<Ci>]** where: **<Lac>** - Local Area Code for the currently registered on cell **<Ci>** - Cell Id for the currently registered on cell Note: **<Lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell. Note: issuing **AT+CREG<CR>** is the same as issuing the Read command. Note: issuing **AT+CREG=<CR>** is the same as issuing the command **AT+CREG=0<CR>**.
AT+CREG?	Read command reports the **<mode>** and **<stat>** parameter values in the format: **+CREG: <mode>,<stat>[,<Lac>,<Ci>]** Note: **<Lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.
AT+CREG=?	Test command returns the range of supported **<mode>**
Example	AT OK at+creg? +CREG: 0,2 OK (the MODULE is in network searching state) at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,1

+CREG - Network Registration Report	SELINT 0 / 1
	OK *(the MODULE is registered)* at+creg? +CREG: 0,1 OK
Reference	3GPP TS 27.007

+CREG - Network Registration Report	SELINT 2
AT+CREG=[<mode>]	Set command enables/disables network registration reports depending on the parameter **<mode>**. Parameter: **<mode>** 0 - disable network registration unsolicited result code (factory default) 1 - enable network registration unsolicited result code 2 - enable network registration unsolicited result code with network Cell identification data If **<mode>=1**, network registration result code reports: **+CREG: <stat>** where **<stat>** 0 - not registered, ME is not currently searching a new operator to register to 1 - registered, home network 2 - not registered, but ME is currently searching a new operator to register to 3 - registration denied 4 -unknown 5 - registered, roaming If **<mode>=2**, network registration result code reports: **+CREG: <stat>[,<Lac>,<Ci>]** where: **<Lac>** - Local Area Code for the currently registered on cell **<Ci>** - Cell Id for the currently registered on cell Note: **<Lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.

+CREG - Network Registration Report	SELINT 2
AT+CREG?	Read command reports the **<mode>** and **<stat>** parameter values in the format: **+CREG: <mode>,<stat>[,<Lac>,<Ci>]** Note: **<Lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.
AT+CREG=?	Test command returns the range of supported **<mode>**
Example	AT OK at+creg? +CREG: 0,2 OK *(the MODULE is in network searching state)* at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,1 OK *(the MODULE is registered)* at+creg? +CREG: 0,1 OK
Reference	3GPP TS 27.007
Note	There are situations in which the presentation of the **URC** controlled by **+CREG** is slightly different from ETSI specifications: e.g. it is possible to have an excessive presentation of the **URC +CREG: 4**. We identified this behaviour and decided to maintain it as default for backward compatibility issues. It is indeed possible to avoid it simply issuing **AT#REGMODE=1** (see **#REGMODE**): this puts the **Operation Mode** of **Registration Status Commands** in '**Enhanced Registration Operation Mode**' which is more formal.

3.5.4.3.4. Operator Selection - +COPS

+COPS - Operator Selection	SELINT 0 / 1
AT+COPS[= **[<mode>** **[,<format>** **[,<oper>]]]]**	Set command forces an attempt to select and register the GSM network operator. **<mode>** parameter defines whether the operator selection is done automatically or it is forced by this command to operator **<oper>**. The operator **<oper>** shall be given in format **<format>**.

+COPS - Operator Selection	SELINT 0 / 1

The behaviour of **+COPS** command depends on the last **#COPSMODE** setting.

(#COPSMODE=0)

Parameters:

<mode>

0 - automatic choice (the parameter **<oper>** will be ignored) (factory default)

1 - manual choice unlocked (network is kept as long as available, then it can be changed with some other suited networks to guarantee the service)

2 - deregister from GSM network; the MODULE is kept unregistered until a **+COPS** with **<mode>=0, 1, 4** or **5** is issued

3 - set only **<format>** parameter (the parameter **<oper>** will be ignored)

4 - manual/automatic **(<oper>** field shall be present); if manual selection fails, automatic mode **(<mode>=0)** is entered

5 - manual choice locked (network is kept fixed, if the chosen network is not available, then the mobile has no service)

<format>

0 - alphanumeric long form (max length 16 digits)

1 - alphanumeric short form

2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]

<oper>: network operator in format defined by **<format>** parameter.

(#COPSMODE=1)

Parameters:

<mode>

0 - automatic choice (the parameter **<oper>** will be ignored) (default)

1 - manual choice **(<oper>** field shall be present)

2 - deregister from GSM network; the MODULE is kept unregistered until a **+COPS** with **<mode>=0, 1** or **4** is issued

3 - set only **<format>** parameter (the parameter **<oper>** will be ignored)

4 - manual/automatic **(<oper>** field shall be present); if manual selection fails, automatic mode **(<mode>=0)** is entered

<format>

0 - alphanumeric long form (max length 16 digits)

2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]

<oper>: network operator in format defined by **<format>** parameter.

Note: **<mode>** parameter setting is stored in NVM and available at next reboot, if it is not **3** (i.e.: set only **<format>** parameter).

Note: if **<mode>=1 or 4** (or **5** if **#COPSMODE=0**), the selected network is stored

+COPS - Operator Selection	SELINT 0 / 1
	in NVM too and is available at next reboot (this will happen even with a new SIM inserted) Note: **<format>** parameter setting is never stored in NVM Note: issuing **AT+COPS<CR>** is the same as issuing the Read command. Note: issuing **AT+COPS=<CR>** is the same as issuing the command **AT+COPS=0<CR>**.
AT+COPS?	Read command returns current value of **<mode>,<format>** and **<oper>** in format **<format>**; if no operator is selected, **<format>** and **<oper>** are omitted **+COPS: <mode>[, <format>, <oper>]**
AT+COPS=?	Test command returns a list of quadruplets, each representing an operator present in the network. The behaviour of Test command depends on the last **#COPSMODE** setting. **(#COPSMODE=0)** The command outputs as many rows as the number of quadruplets, each of them in the format: **+COPS: (<stat> ,<oper (in <format>=0)>,"",** **<oper (in <format>=2)>)** where **<stat>** - operator availability 0 - unknown 1 - available 2 - current 3 - forbidden **(#COPSMODE=1)** The quadruplets in the list are separated by commas: **+COPS: [list of supported (<stat> ,<oper (in <format>=0)>,,** **<oper (in <format>=2)>)s][,,(list of supported <mode>s),** **(list of supported<format>s)]** where **<stat>** - operator availability 0 - unknown 1 - available 2 - current 3 - forbidden

+COPS - Operator Selection	SELINT 0 / 1
	Note: since with this command a network scan is done, this command may require some seconds before the output is given. Note: The value of parameter **<oper>** (in **<format>=0**) is the same as the former GM862 family products.
Reference	3GPP TS 27.007

+COPS - Operator Selection	SELINT 2
AT+COPS= **[<mode>** **[,<format>** **[,<oper>]]]**	Set command forces an attempt to select and register the GSM network operator. **<mode>** parameter defines whether the operator selection is done automatically or it is forced by this command to operator **<oper>**. The operator **<oper>** shall be given in format **<format>**. Parameters: **<mode>** 0 - automatic choice (the parameter **<oper>** will be ignored) (factory default) 1 - manual choice (**<oper>** field shall be present) 2 - deregister from GSM network; the MODULE is kept unregistered until a **+COPS** with **<mode>=0, 1** or **4** is issued 3 - set only **<format>** parameter (the parameter **<oper>** will be ignored) 4 - manual/automatic (**<oper>** field shall be present); if manual selection fails, automatic mode (**<mode>=0**) is entered **<format>** 0 - alphanumeric long form (max length 16 digits) 2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)] **<oper>**: network operator in format defined by **<format>** parameter. Note: **<mode>** parameter setting is stored in NVM and available at next reboot, if it is not **3** (i.e.: set only **<format>** parameter). Note: if **<mode>=1 or 4**, the selected network is stored in NVM too and is available at next reboot (this will happen even with a new SIM inserted) Note: **<format>** parameter setting is never stored in NVM
AT+COPS?	Read command returns current value of **<mode>**,**<format>** and **<oper>** in format **<format>**; if no operator is selected, **<format>** and **<oper>** are omitted **+COPS: <mode>**[, **<format>**, **<oper>**]
AT+COPS=?	Test command returns a list of quadruplets, each representing an operator present in the network. The quadruplets in the list are separated by commas: **+COPS: [list of supported (<stat> ,<oper (in <format>=0)>,,** **<oper (in <format>=2)>)s][,,(list of supported <mode>s),** **(list of supported<format>s)]**

+COPS - Operator Selection	SELINT 2
	where <**stat**> - operator availability 0 - unknown 1 - available 2 - current 3 - forbidden Note: since with this command a network scan is done, this command may require some seconds before the output is given.
Reference	3GPP TS 27.007

3.5.4.3.5. Facility Lock/Unlock - +CLCK

+CLCK - Facility Lock/Unlock	SELINT 0 / 1
AT+CLCK= **<fac>,<mode>** **[,<passwd>** **[,<class>]]**	Execution command is used to lock or unlock a **ME** o a network facility. Parameters: <**fac**> - facility "SC" - SIM (PIN request) (device asks SIM password at power-up and when this lock command issued) "AO"- BAOC (Barr All Outgoing Calls) "OI" - BOIC (Barr Outgoing International Calls) "OX" - BOIC-exHC (Barr Outgoing International Calls except to Home Country) "AI" - BAIC (Barr All Incoming Calls) "IR" - BIC-Roam (Barr Incoming Calls when Roaming outside the home country) "AB" - All Barring services (applicable only for <**mode**>=**0**) "AG" - All outGoing barring services (applicable only for <**mode**>=**0**) "AC" - All inComing barring services (applicable only for <**mode**>=**0**) "FD" - SIM fixed dialling memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as <**passwd**>) "PN" - network Personalisation "PU" - network subset Personalisation <**mode**> - defines the operation to be done on the facility 0 - unlock facility 1 - lock facility 2 - query status <**passwd**> - shall be the same as password specified for the facility from the **DTE** user interface or with command Change Password **+CPWD** <**class**> - sum of integers each representing a class of information (default is 7) 1- voice (telephony) 2 - data (refers to all bearer services) 4 - fax (facsimile services) 8 - short message service

+CLCK - Facility Lock/Unlock	SELINT 0 / 1
	16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access Note: when **<mode>=2** and command successful, it returns: **+CLCK: <status>** where **<status>** - current status of the facility 0 - not active 1 - active
AT+CLCK=?	Test command reports all the facility supported by the device.
Reference	3GPP TS 27.007
Note	The improving command **@CLCK** has been defined.

+CLCK - Facility Lock/Unlock	SELINT 2
AT+CLCK=<fac>,<mode>[,<passwd>[,<class>]]	Execution command is used to lock or unlock a **ME** o a network facility. Parameters: **<fac>** - facility "PS" - PH-SIM (lock PHone to SIM card) MT asks password when other than current SIM card inserted; MT may remember certain amount of previously used cards thus not requiring password when they are inserted "PF" - lock Phone to the very First inserted SIM card (MT asks password when other than the first SIM card is inserted) "SC" - SIM (PIN request) (device asks SIM password at power-up and when this lock command issued) "AO"- BAOC (Barr All Outgoing Calls) "OI" - BOIC (Barr Outgoing International Calls) "OX" - BOIC-exHC (Barr Outgoing International Calls except to Home Country) "AI" - BAIC (Barr All Incoming Calls) "IR" - BIC-Roam (Barr Incoming Calls when Roaming outside the home country) "AB" - All Barring services (applicable only for **<mode>=0**) "AG" - All outGoing barring services (applicable only for **<mode>=0**) "AC" - All inComing barring services (applicable only for **<mode>=0**) "FD" - SIM fixed dialling memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as **<passwd>**) "PN" - network Personalisation "PU" - network subset Personalisation "PP" - service Provider Personalization "PC" - Corporate Personalization "MC" – Multi Country Lock[38]

[38] Only available on software version 10.00.00x

+CLCK - Facility Lock/Unlock	SELINT 2
	<mode> - defines the operation to be done on the facility 0 - unlock facility 1 - lock facility 2 - query status **<passwd>** - shall be the same as password specified for the facility from the **DTE** user interface or with command Change Password **+CPWD** **<class>** - sum of integers each representing a class of information (default is 7) 1 - voice (telephony) 2 - data (refers to all bearer services) 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access Note: when **<mode>=2** and command successful, it returns: **+CLCK: <status>[,<class1>[<CR><LF>+CLCK: <status>,<class2>[…]]** where **<status>** - the current status of the facility 0 - not active 1 - active **<class*n*>** - class of information of the facility
AT+CLCK=?	Test command reports all the facilities supported by the device.
Reference	3GPP TS 27.007
Example	*Querying such a facility returns an output on three rows, the first for voice, the second for data, the third for fax:* AT+CLCK =”AO”,2 +CLCK: <status>,1 +CLCK: <status>,2 +CLCK: <status>,4

3.5.4.3.6. Facility Improved Lock/Unlock - @CLCK

@CLCK - Facility Improved Lock/Unlock	SELINT 0 / 1
AT@CLCK=<fac>,<mode>[,<passwd>[,<class>]]	Execution command is used to lock or unlock a **ME** or a network facility. Parameters: **<fac>** - facility "SC" - SIM (PIN request) (device asks SIM password at power-up and when this lock command issued) "AO"- BAOC (Barr All Outgoing Calls) "OI" - BOIC (Barr Outgoing International Calls) "OX" - BOIC-exHC (Barr Outgoing International Calls except to Home Country)

@CLCK - Facility Improved Lock/Unlock	SELINT 0 / 1
	"AI" - BAIC (Barr All Incoming Calls) "IR" - BIC-Roam (Barr Incoming Calls when Roaming outside the home country) "AB" - All Barring services (applicable only for **<mode>=0**) "AG" - All outGoing barring services (applicable only for **<mode>=0**) "AC" - All inComing barring services (applicable only for **<mode>=0**) "FD" - SIM fixed dialling memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as **<passwd>**) "PN" - network Personalisation "PU" - network subset Personalisation **<mode>** - defines the operation to be done on the facility 0 - unlock facility 1 - lock facility 2 - query status **<passwd>** - shall be the same as password specified for the facility from the **DTE** user interface or with command Change Password **+CPWD** **<class>** - sum of integers each representing a class of information (default is 7) 1- voice (telephony) 2 - data (refers to all bearer services) 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access Note: when **<mode>=2** and command successful, it returns: **@CLCK: <status>[,<class1>** **[<CR><LF>@CLCK: <status>,<class2>[…]]** where **<status>** - the current status of the facility 0 - not active 1 - active **<class*n*>** - class of information of the facility
AT@CLCK=?	Test command reports all the facilities supported by the device.
Reference	3GPP TS 27.007
Example	*Querying such a facility returns an output on three rows, the first for voice, the second for data, the third for fax:* AT@CLCK =”AO”,2 @CLCK: <status>,1 @CLCK: <status>,2 @CLCK: <status>,4 OK

3.5.4.3.7. Change Facility Password - +CPWD

+CPWD - Change Facility Password	SELINT 0 / 1
AT+CPWD=<fac>, <oldpwd>, <newpwd>	Execution command changes the password for the facility lock function defined by command Facility Lock **+CLCK**. Parameters: **<fac>** - facility "SC" - SIM (PIN request) "AB" - All barring services "P2" - SIM PIN2 **<oldpwd>** - string type, it shall be the same as password specified for the facility from the ME user interface or with command **+CPWD**. **<newpwd>** - string type, it is the new password Note: parameter **<oldpwd>** is the old password while **<newpwd>** is the new one.
AT+CPWD=?	Test command returns a list of pairs **(<fac>,<pwdlength>)** which presents the available facilities and the maximum length of their password (**<pwdlength>**)
Example	at+cpwd=? +CPWD: ("SC",8),("AB",4),("P2",4) OK
Reference	3GPP TS 27.007

+CPWD - Change Facility Password	SELINT 2
AT+CPWD=<fac>, <oldpwd>, <newpwd>	Execution command changes the password for the facility lock function defined by command Facility Lock **+CLCK**. Parameters: **<fac>** - facility "SC" - SIM (PIN request) "AB" - All barring services "P2" - SIM PIN2 "PS"- SIM VO **<oldpwd>** - string type, it shall be the same as password specified for the facility from the ME user interface or with command **+CPWD**. **<newpwd>** - string type, it is the new password Note: parameter **<oldpwd>** is the old password while **<newpwd>** is the new one.
AT+CPWD=?	Test command returns a list of pairs **(<fac>,<pwdlength>)** which presents the available facilities and the maximum length of their password (**<pwdlength>**)
Example	at+cpwd=? +CPWD: ("SC",8),("AB",4),("P2",8),("PS",8) OK
Reference	3GPP TS 27.007

3.5.4.3.8. Calling Line Identification Presentation - +CLIP

+CLIP - Calling Line Identification Presentation	SELINT 0 / 1
AT+CLIP[=[<n>]]	Set command enables/disables the presentation of the CLI (Calling Line Identity) at the **TE**. This command refers to the GSM supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the CLI of the calling party when receiving a mobile terminated call. Parameters: **<n>** 0 - disables CLI indication (factory default) 1 - enables CLI indication If enabled the device reports after each **RING** the response: **+CLIP: <number>,<type>,"",128,<alpha>,<CLI_validity>** where: **<number>** - string type phone number of format specified by **<type>** **<type>** - type of address octet in integer format 128 - both the type of number and the numbering plan are unknown 129 - unknown type of number and ISDN/Telephony numbering plan 145 - international type of number and ISDN/Telephony numbering plan (contains the character "+") **<alpha>** - string type; alphanumeric representation of **<number>** corresponding to the entry found in phonebook; used character set should be the one selected with command Select **TE** character set **+CSCS**. **<CLI_validity>** 0 - CLI valid 1 - CLI has been withheld by the originator. 2 - CLI is not available due to interworking problems or limitation or originating network. Note: in the **+CLIP:** response they are currently not reported either the **subaddress** information (it's always **""** after the 2nd comma) and the **subaddress type** information (it's always **128** after the 3rd comma) Note: issuing **AT+CLIP<CR>** is the same as issuing the Read command. Note: issuing **AT+CLIP=<CR>** is the same as issuing the command **AT+CLIP=0<CR>**.
AT+CLIP?	Read command returns the presentation status of the CLI in the format: **+CLIP: <n>,<m>** where: **<n>**

+CLIP - Calling Line Identification Presentation	SELINT 0 / 1
	0 - CLI presentation disabled 1 - CLI presentation enabled <**m**> - status of the CLIP service on the GSM network 0 - CLIP not provisioned 1 - CLIP provisioned 2 - unknown (e.g. no network is present) Note: This command issues a status request to the network, hence it may take a few seconds to give the answer due to the time needed to exchange data with it.
AT+CLIP=?	Test command returns the supported values of the parameter <**n**>
Reference	3GPP TS 27.007
Note	The command changes only the report behaviour of the device, it does not change CLI supplementary service setting on the network.

+CLIP - Calling Line Identification Presentation	SELINT 2
AT+CLIP=[<n>]	Set command enables/disables the presentation of the CLI (Calling Line Identity) at the **TE**. This command refers to the GSM supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the CLI of the calling party when receiving a mobile terminated call. Parameters: <**n**> 0 - disables CLI indication (factory default) 1 - enables CLI indication If enabled the device reports after each RING the response: **+CLIP: <number>,<type>,"",128,<alpha>,<CLI_validity>** where: <**number**> - string type phone number of format specified by <**type**> <**type**> - type of address octet in integer format 128 - both the type of number and the numbering plan are unknown 129 - unknown type of number and ISDN/Telephony numbering plan 145 - international type of number and ISDN/Telephony numbering plan (contains the character "+") <**alpha**> - string type; alphanumeric representation of <**number**> corresponding to the entry found in phonebook; used character set should be the one selected with command Select **TE** character set **+CSCS**. <**CLI_validity**> 0 - CLI valid 1 - CLI has been withheld by the originator. 2 - CLI is not available due to interworking problems or limitation or originating network.

+CLIP - Calling Line Identification Presentation	SELINT 2
	Note: in the **+CLIP:** response they are currently not reported either the **subaddress** information (it's always **""** after the 2nd comma) and the **subaddress type** information (it's always **128** after the 3rd comma)
AT+CLIP?	Read command returns the presentation status of the CLI in the format: **+CLIP: <n>,<m>** where: **<n>** 0 - CLI presentation disabled 1 - CLI presentation enabled **<m>** - status of the CLIP service on the GSM network 0 - CLIP not provisioned 1 - CLIP provisioned 2 - unknown (e.g. no network is present) Note: This command issues a status request to the network, hence it may take a few seconds to give the answer due to the time needed to exchange data with it.
AT+CLIP=?	Test command returns the supported values of parameter **<n>**
Reference	3GPP TS 27.007
Note	The command changes only the report behaviour of the device, it does not change CLI supplementary service setting on the network.

3.5.4.3.9. Calling Line Identification Restriction - +CLIR

+CLIR - Calling Line Identification Restriction	SELINT 0 / 1
AT+CLIR[=[<n>]]	Set command overrides the CLIR subscription when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command. This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call. Parameter: **<n>** - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent) Note: issuing **AT+CLIR<CR>** is the same as issuing the Read command. Note: issuing **AT+CLIR=<CR>** is the same as issuing the command **AT+CLIR=0<CR>**.
AT+CLIR?	Read command gives the default adjustment for all outgoing calls **(<n>)** and also triggers an interrogation of the provision status of the CLIR service **(<m>)**, where

+CLIR - Calling Line Identification Restriction	SELINT 0 / 1
	<n> - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent) **<m>** - facility status on the Network 0 - CLIR service not provisioned 1 - CLIR service provisioned permanently 2 - unknown (e.g. no network present, etc.) 3 - CLI temporary mode presentation restricted 4 - CLI temporary mode presentation allowed
AT+CLIR=?	Test command reports the supported values of parameter **<n>**.
Reference	3GPP TS 27.007
Note	This command sets the default behaviour of the device in outgoing calls.

+CLIR - Calling Line Identification Restriction	SELINT 2
AT+CLIR=[<n>]	Set command overrides the CLIR subscription when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command. This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call. Parameter: **<n>** - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent)
AT+CLIR?	Read command gives the default adjustment for all outgoing calls (**<n>**) and also triggers an interrogation of the provision status of the CLIR service (**<m>**), where **<n>** - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent) **<m>** - facility status on the Network 0 - CLIR service not provisioned 1 - CLIR service provisioned permanently 2 - unknown (e.g. no network present, etc.) 3 - CLI temporary mode presentation restricted 4 - CLI temporary mode presentation allowed
AT+CLIR=?	Test command reports the supported values of parameter **<n>**.
Reference	3GPP TS 27.007
Note	This command sets the default behaviour of the device in outgoing calls.

3.5.4.3.10. Call Forwarding Number And Conditions - +CCFC

+CCFC - Call Forwarding Number And Condition	SELINT 0 / 1 / 2
AT+CCFC= <reason>, <cmd>[,<number>[, type>[,<class> [,,,<time>]]]	Execution command controls the call forwarding supplementary service. Registration, erasure, activation, deactivation, and status query are supported. Parameters: **<reason>** 0 - unconditional 1 - mobile busy 2 - no reply 3 - not reachable 4 - all calls (not with query command) 5 - all conditional calls (not with query command) **<cmd>** 0 - disable 1 - enable 2 - query status 3 - registration 4 - erasure **<number>** - string type phone number of forwarding address in format specified by **<type>** parameter **<type>** - type of address octet in integer format : 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<class>** - sum of integers each representing a class of information which the command refers to; default 7 (voice + data + fax) 1 - voice (telephony) 2 - data 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access **<time>** - time in *seconds* to wait before call is forwarded; it is valid only when **<reason>** "no reply" is enabled (**<cmd>**=1) or queried (**<cmd>**=2) 1..30 - automatically rounded to a multiple of 5 seconds (default is 20) Note: when **<cmd>=2** and command successful, it returns: **+CCFC: <status>,<class1>[,<number>,<type>[,,,<time>]][<CR><LF>** **+CCFC: <status>,<class2>[,<number>,<type>[,,,<time>]][…]]**

+CCFC - Call Forwarding Number And Condition	SELINT 0 / 1 / 2
	where: <**status**> - current status of the network service 0 - not active 1 - active <**class*n***> - same as <**class**> <**time**> - it is returned only when <**reason**>=2 ("no reply") and <**cmd**>=2. The other parameters are as seen before.
AT+CCFC=?	Test command reports supported values for the parameter <**reason**>.
Reference	3GPP TS 27.007
Note	When querying the status of a network service **(<cmd>=2)** the response line for 'not active' case **(<status>=0)** should be returned only if service is not active for any <**class**>.

3.5.4.3.11. Call Waiting - +CCWA

+CCWA - Call Waiting	SELINT 0 / 1
AT+CCWA[= [<n>[,<cmd> [,<class>]]]]	Set command allows the control of the call waiting supplementary service. Activation, deactivation, and status query are supported. Parameters: <**n**> - enables/disables the presentation of an unsolicited result code: 0 - disable 1 - enable <**cmd**> - enables/disables or queries the service at network level: 0 - disable 1 - enable 2 - query status <**class**> - is a sum of integers each representing a class of information which the command refers to; default is 7 (**voice + data + fax**) 1 - voice (telephony) 2 - data 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access Note: the response to the query command is in the format: **+CCWA: <status>,<class1>[<CR><LF>** **+CCWA: <status>,<class2>[…]]** where <**status**> represents the status of the service:

+CCWA - Call Waiting	SELINT 0 / 1
	0 - inactive 1 - active <**class*n***> - same as <**class**> Note: the unsolicited result code enabled by parameter <**n**> is in the format: **+CCWA: <number>,<type>,<class>,<alpha>,<cli_validity>** where <**number**> - string type phone number of calling address in format specified by <**type**> <**type**> - type of address in integer format <**class**> - see before <**alpha**> - string type; alphanumeric representation of <**number**> corresponding to the entry found in phonebook; used character set should be the one selected with **+CSCS**. <**cli_validity**> 0 - CLI valid 1 - CLI has been withheld by the originator 2 - CLI is not available due to interworking problems or limitations of originating network Note: if parameter <**cmd**> is omitted then network is not interrogated. Note: in the query command the class parameter must not be issued. Note: the difference between call waiting report disabling (**AT+CCWA = 0,1,7**) and call waiting service disabling (**AT+CCWA = 0,0,7**) is that in the first case the call waiting indication is sent to the device by network but this last one does not report it to the **DTE**; instead in the second case the call waiting indication is not generated by the network. Hence the device results busy to the third party in the 2nd case while in the 1st case a ringing indication is sent to the third party. Note: The command **AT+CCWA=1,0** has no effect a non sense and must not be issued. Note: issuing **AT+CCWA<CR>** is the same as issuing the Read command. Note: issuing **AT+CCWA=<CR>** is the same as issuing the command **AT+CCWA=0<CR>**.
AT+CCWA?	Read command reports the current value of the parameter <**n**>.
AT+CCWA=?	Test command reports the supported values for the parameter <**n**>.
Reference	3GPP TS 27.007

+CCWA - Call Waiting	SELINT 2
AT+CCWA=	Set command allows the control of the call waiting supplementary service.

+CCWA - Call Waiting	SELINT 2
[<n>[,<cmd>[,<class>]]]	Activation, deactivation, and status query are supported. Parameters: **<n>** - enables/disables the presentation of an unsolicited result code: 0 - disable 1 - enable **<cmd>** - enables/disables or queries the service at network level: 0 - disable 1 - enable 2 - query status **<class>** - is a sum of integers each representing a class of information which the command refers to; default is 7 (**voice + data + fax**) 1 - voice (telephony) 2 - data 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access Note: the response to the query command is in the format: **+CCWA: <status>,<class1>[<CR><LF>** **+CCWA: <status>,<class2>[…]]** where **<status>** represents the status of the service: 0 - inactive 1 - active **<class*n*>** - same as **<class>** Note: the unsolicited result code enabled by parameter **<n>** is in the format:: **+CCWA: <number>,<type>,<class>,[<alpha>][,<cli_validity>]** where: **<number>** - string type phone number of calling address in format specified by **<type>** **<type>** - type of address in integer format **<class>** - see before **<alpha>** - string type; alphanumeric representation of **<number>** corresponding to the entry found in phonebook; used character set should be the one selected with **+CSCS**. **<cli_validity>** 0 - CLI valid 1 - CLI has been withheld by the originator 2 - CLI is not available due to interworking problems or limitations of originating

+CCWA - Call Waiting	SELINT 2
	network Note: if parameter **<cmd>** is omitted then network is not interrogated. Note: in the query command the class parameter must not be issued. 3.5.4.3.12. Call Holding Services - +CHLD

+CHLD - Call Holding Services	SELINT 0 / 1
AT+CHLD=<n>	Execution command controls the network call hold service. With this service it is possible to disconnect temporarily a call and keep it suspended while it is retained by the network, contemporary it is possible to connect another party or make a multiparty connection. Parameter: **<n>** 0 - releases all held calls, or sets the UDUB (User Determined User Busy) indication for a waiting call. 1 - releases all active calls (if any exist), and accepts the other (held or waiting) call 1X - releases a specific active call X 2 - places all active calls (if any exist) on hold and accepts the other (held or waiting) call. 2X - places all active calls on hold except call X with which communication shall be supported 3 - adds an held call to the conversation Note: "X" is the numbering (starting with 1) of the call given by the sequence of setting up or receiving the calls (active, held or waiting) as seen by the served subscriber. Calls hold their number until they are released. New calls take the lowest available number. Note: where both a held and a waiting call exist, the above procedures apply to the

+CHLD - Call Holding Services	SELINT 0 / 1
	waiting call (i.e. not to the held call) in conflicting situation.
AT+CHLD=?	Test command returns the list of supported **<n>s**. **+CHLD: (0,1,2,3)** Note: consider what has been written about the Set command relating the actions on a specific call (X).
Reference	3GPP TS 27.007
Note	ONLY for VOICE calls

+CHLD - Call Holding Services	SELINT 2
AT+CHLD=[<n>]	Execution command controls the network call hold service. With this service it is possible to disconnect temporarily a call and keep it suspended while it is retained by the network, contemporary it is possible to connect another party or make a multiparty connection. Parameter: **<n>** 0 - releases all held calls, or sets the UDUB (User Determined User Busy) indication for a waiting call. 1 - releases all active calls (if any exist), and accepts the other (held or waiting) call 1X - releases a specific active call X 2 - places all active calls (if any exist) on hold and accepts the other (held or waiting) call. 2X - places all active calls on hold except call X with which communication shall be supported. 3 - adds an held call to the conversation 4 - connects the two calls and disconnects the subscriber from both calls (Explicit Call Transfer (ECT)) Note: "X" is the numbering (starting with 1) of the call given by the sequence of setting up or receiving the calls (active, held or waiting) as seen by the served subscriber. Calls hold their number until they are released. New calls take the lowest available number. Note: where both a held and a waiting call exist, the above procedures apply to the waiting call (i.e. not to the held call) in conflicting situation.

Note	ONLY for VOICE calls

3.5.4.3.13. Unstructured Supplementary Service Data - +CUSD

+CUSD - Unstructured Supplementary Service Data	**SELINT 0 / 1**
AT+CUSD[=[<n>[,<str>[,<dcs>]]]]	Set command allows control of the Unstructured Supplementary Service Data (USSD [GSM 02.90]). Parameters: **<n>** - is used to disable/enable the presentation of an unsolicited result code. 0 - disable the result code presentation in the **DTA** 1 - enable the result code presentation in the **DTA** **<str>** - USSD-string (when **<str>** parameter is not given, network is not interrogated) - If **<dcs>** indicates that GSM338 default alphabet is used **ME/TA** converts GSM alphabet into current TE character set (see **+CSCS**) - If **<dcs>** indicates that 8-bit data coding scheme is used: **ME/TA** converts each 8-bit octet into two IRA character long hexadecimal number; e.g. octet with integer value 42 is presented to **TE** as two characters 2A (IRA 50 and 65). **<dcs>** - GSM 3.38 Cell Broadcast Data Coding Scheme in integer format (default is 0). Note: the unsolicited result code enabled by parameter **<n>** is in the format: **+CUSD: <m>[,<str>,<dcs>]** to the **TE** where: **<m>**: 0 - no further user action required (network initiated USSD-Notify, or no further information needed after mobile initiated operation). 1 - further user action required (network initiated USSD-Request, or further information needed after mobile initiated operation) 2 - USSD terminated by the network 3 - other local client has responded 4 - operation not supported 5 - network time out Note: in case of successful mobile initiated operation, **DTA** waits the USSD response from the network and sends it to the **DTE** before the final result code. This will block the AT command interface for the period of the operation. Note: issuing **AT+CUSD<CR>** is the same as issuing the Read command. Note: issuing **AT+CUSD=<CR>** is the same as issuing the command **AT+CUSD=0<CR>**.

+CUSD - Unstructured Supplementary Service Data	SELINT 0 / 1

3.5.4.3.14. Advice Of Charge - +CAOC

+CAOC - Advice Of Charge	SELINT 0 / 1
AT+CAOC[= [<mode>]]	Set command refers to the Advice of Charge supplementary services that enable subscriber to get information about the cost of calls; the command also includes the possibility to enable an unsolicited event reporting of the Current Call Meter (CCM) information. Parameter: **<mode>** 0 - query CCM value 1 - disables unsolicited CCM reporting 2 - enables unsolicited CCM reporting Note: the unsolicited result code enabled by parameter **<mode>** is in the format: **+CCCM: <ccm>** where: **<ccm>** - current call meter in home units, string type: three bytes of the CCM value in hexadecimal format (e.g. "00001E" indicates decimal value 30) Note: the unsolicited result code **+CCCM** is sent when the CCM value changes, but not more than every 10 seconds. Note: issuing **AT+CAOC<CR>** is the same as issuing the Read command. Note: issuing **AT+CAOC=<CR>** is the same as issuing the command **AT+CAOC=0<CR>**.
AT+CAOC?	Read command reports the value of parameter **<mode>** in the format: **+CAOC: <mode>**
AT+CAOC=?	Test command reports the supported values for **<mode>** parameter. Note: the representation format doesn't match the v.25ter §5.7.3 "Information text formats for test commands". The output is: **+CAOC: 0, 1, 2**
Reference	3GPP TS 27.007
Note	**+CAOC** command returns an estimate of the cost of the current call only, produced by the MS and based on the information provided by either AoCI or AOCC

+CAOC - Advice Of Charge	SELINT 0 / 1
	supplementary services; it is not stored in the SIM.

+CAOC - Advice Of Charge	SELINT 2
AT+CAOC= <mode>	Set command refers to the Advice of Charge supplementary services that enable subscriber to get information about the cost of calls; the command also includes the possibility to enable an unsolicited event reporting of the Current Call Meter (CCM) information. Parameter: **<mode>** 0 - query CCM value 1 - disables unsolicited CCM reporting 2 - enables unsolicited CCM reporting Note: the unsolicited result code enabled by parameter **<mode>** is in the format: **+CCCM: <ccm>** where: **<ccm>** - current call meter in home units, string type: three bytes of the CCM value in hexadecimal format (e.g. "00001E" indicates decimal value 30) Note: the unsolicited result code **+CCCM** is sent when the CCM value changes, but not more than every 10 seconds.
AT+CAOC?	Read command reports the value of parameter **<mode>** in the format: **+CAOC: <mode>**
AT+CAOC=?	Test command reports the supported values for **<mode>** parameter.
Reference	3GPP TS 27.007
Note	**+CAOC** command returns an estimate of the cost of the current call only, produced by the MS and based on the information provided by either AoCI or AOCC supplementary services; it is not stored in the SIM.

3.5.4.3.15. List Current Calls - +CLCC

+CLCC - List Current Calls	SELINT 0 / 1
AT+CLCC	Execution command returns the list of current calls and their characteristics in the format: **[+CLCC:<id1>,<dir>,<stat>,<mode>,<mpty>,<number>,<type>** **[<CR><LF>+CLCC:<id2>,<dir>,<stat>,<mode>,<mpty>,<number>,<type>[** **…]]]** where: **<id*n*>** - call identification number

+CLCC - List Current Calls	SELINT 0 / 1
	<dir> - call direction 0 - mobile originated call 1 - mobile terminated call **<stat>** - state of the call 0 - active 1 - held 2 - dialling (**MO** call) 3 - alerting (**MO** call) 4 - incoming (**MT** call) 5 - waiting (**MT** call) **<mode>** - call type 0 - voice 1 - data 2 - fax 9 - unknown **<mpty>** - multiparty call flag 0 - call is not one of multiparty (conference) call parties 1 - call is one of multiparty (conference) call parties **<number>** - string type phone number in format specified by **<type>** **<type>** - type of phone number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") Note: If no call is active then only **OK** message is sent. This command is useful in conjunction with command **+CHLD** to know the various call status for call holding.
Reference	3GPP TS 27.007

+CLCC - List Current Calls	SELINT 2
AT+CLCC	Execution command returns the list of current calls and their characteristics in the format: **[+CLCC:<id1>,<dir>,<stat>,<mode>,<mpty>,<number>,<type>** **,<alpha>[<CR><LF>+CLCC:<id2>,<dir>,<stat>,<mode>,** **<mpty>,<number>,<type>,<alpha>[…]]]** where: **<id*n*>** - call identification number **<dir>** - call direction 0 - mobile originated call 1 - mobile terminated call **<stat>** - state of the call

+CLCC - List Current Calls	SELINT 2
	0 - active 1 - held 2 - dialing (**MO** call) 3 - alerting (**MO** call) 4 - incoming (**MT** call) 5 - waiting (**MT** call) **<mode>** - call type 0 - voice 1 - data 2 - fax 9 - unknown **<mpty>** - multiparty call flag 0 - call is not one of multiparty (conference) call parties 1 - call is one of multiparty (conference) call parties **<number>** - string type phone number in format specified by **<type>** **<type>** - type of phone number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<alpha>** - string type; alphanumeric representation of **<number>** corresponding to the entry found in phonebook; used character set should be the one selected with **+CSCS**. Note: If no call is active then only **OK** message is sent. This command is useful in conjunction with command **+CHLD** to know the various call status for call holding.
AT+CLCC=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.3.16. SS Notification - +CSSN

+CSSN - SS Notification	SELINT 0 / 1
AT+CSSN[=[<n>[,<m>]]]	It refers to supplementary service related network initiated notifications. Set command enables/disables the presentation of notification result codes from **TA** to **TE**. Parameters: **<n>** - sets the **+CSSI** result code presentation status 0 - disable 1 - enable **<m>** - sets the **+CSSU** result code presentation status 0 - disable 1 - enable When **<n>=1** and a supplementary service notification is received after a mobile originated call setup, an unsolicited code:

+CSSN - SS Notification	SELINT 0 / 1
	+CSSI: <code1> is sent to **TE** before any other **MO** call setup result codes, where: **<code1>**: 0 - unconditional call forwarding is active 1 - some of the conditional call forwarding are active 2 - call has been forwarded 3 - call is waiting 5 - outgoing calls are barred 6 - incoming calls are barred When **<m>=1** and a supplementary service notification is received during a mobile terminated call setup or during a call, an unsolicited result code **+CSSU: <code2>** is sent to **TE**, where: **<code2>**: 0 - this is a forwarded call (**MT** call setup) 2 - call has been put on hold (during a voice call) 3 - call has been retrieved (during a voice call) Note: issuing **AT+CSSN<CR>** is the same as issuing the Read command. Note: issuing **AT+CSSN=<CR>** is the same as issuing the command **AT+CSSN=0<CR>**.
AT+CSSN?	Read command reports the current value of the parameters.
AT+CSSN=?	Test command reports the supported range of values for parameters **<n>**, **<m>**.

3.5.4.3.18. Preferred Operator List - +CPOL

+CPOL - Preferred Operator List	SELINT 2
AT+CPOL= [<index>][,<format> [,<oper>]]	Execution command writes an entry in the SIM list of preferred operators. Parameters: **<index>** - integer type; the order number of operator in the SIM preferred operator list 1..*n* **<format>** 2 - numeric **<oper>** **<oper>** - string type Note: if **<index>** is given but **<oper>** is left out, entry is deleted. If **<oper>** is given

+CPOL - Preferred Operator List	SELINT 2
	but **<index>** is left out, **<oper>** is put in the next free location. If only **<format>** is given, the format of the **<oper>** in the read command is changed.
AT+CPOL?	Read command returns all used entries from the SIM list of preferred operators.
AT+CPOL=?	Test command returns the whole **<index>** range supported by the SIM and the range for the parameter **<format>**
Reference	3GPP TS 27.007

3.5.4.3.19. Selection of preferred PLMN list - +CPLS

+CPLS – Selection of preferred PLMN list	SELINT 2
AT+CPLS=<list>	The execution command is used to select a list of preferred PLMNs in the SIM/USIM. Parameters: **<list>:** 0 - User controlled PLMN selector with Access Technology EFPLMNwAcT, if not found in the SIM/UICC then PLMN preferred list EFPLMNsel (this file is only available in SIM card or GSM application selected in UICC) 1 - Operator controlled PLMN selector with Access Technology EFOPLMNwAcT 2 - HPLMN selector with Access Technology EFHPLMNwAcT Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.
AT+CPLS?	Read command returns the selected PLMN selector **<list>** from the SIM/USIM.
AT+CPLS=?	Test command returns the whole index range supported **<list>**s by the SIM/USIM.

3.5.4.3.20. Call deflection - +CTFR

+CTFR – Call deflection	SELINT 2
AT+CTFR=<number>[,<type>]	Set command is used to request a service that causes an incoming alerting call to be forwarded to a specified number. This is based on the GSM/UMTS supplementary service CD (Call Deflection; refer 3GPP TS 22.072). Parameters: **<number>:** string type phone number of format specified by **<type>** **<type>:** type of address octet in integer format; default 145 when

	dialling string includes international access code character "+", otherwise 129 Note: Call Deflection is only applicable to an incoming voice call
AT+CTFR=?	Test command tests for command existence

3.5.4.4. Mobile Equipment Control

3.5.4.4.1. Phone Activity Status - +CPAS

+CPAS - Phone Activity Status	**SELINT 0 / 1**
AT+CPAS	Execution command reports the device status in the form: **+CPAS: <pas>** Where: **<pas>** - phone activity status 0 - ready (device allows commands from **TA/TE**) 1 - unavailable (device does not allow commands from **TA/TE**) 2 - unknown (device is not guaranteed to respond to instructions) 3 - ringing (device is ready for commands from **TA/TE**, but the ringer is active) 4 - call in progress (device is ready for commands from **TA/TE**, but a call is in progress)
AT+CPAS?	Read command has the same effect as Execution command.
AT+CPAS=?	Test command reports the supported range of values for **<pas>**. Note: although **+CPAS** is an execution command, ETSI 07.07 requires the Test command to be defined.
Reference	3GPP TS 27.007

+CPAS - Phone Activity Status	**SELINT 2**
AT+CPAS	Execution command reports the device status in the form: **+CPAS: <pas>** Where: **<pas>** - phone activity status 0 - ready (device allows commands from **TA/TE**) 1 - unavailable (device does not allow commands from **TA/TE**) 2 - unknown (device is not guaranteed to respond to instructions) 3 - ringing (device is ready for commands from **TA/TE**, but the ringer is active) 4 - call in progress (device is ready for commands from **TA/TE**, but a call is in progress)
AT+CPAS=?	Test command reports the supported range of values for **<pas>**.

+CPAS - Phone Activity Status	SELINT 2
	Note: although **+CPAS** is an execution command, ETSI 07.07 requires the Test command to be defined.
Example	ATD03282131321; OK AT+CPAS +CPAS: 4 *the called phone has answered to your call* OK ATH OK
Reference	3GPP TS 27.007

3.5.4.4.2. Set Phone Functionality - +CFUN

+CFUN - Set Phone Functionality	SELINT 0 / 1
AT+CFUN=<fun>	Set command selects the level of functionality in the **ME**. Parameter: **<fun>** - is the power saving function mode 0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode, the AT interface is not accessible. Consequently, once you have set **<fun>** level 0, do not send further characters. Otherwise these characters remain in the input buffer and may delay the output of an unsolicited result code. The first wake-up event, or rising **RTS** line, stops power saving and takes the ME back to full functionality level **<fun>=1**. 1 - mobile full functionality with power saving disabled (factory default) 2 - disable TX 4 - disable either TX and RX 5 - mobile full functionality with power saving enabled Note: issuing **AT+CFUN=4** actually causes the module to perform either a network deregistration and a SIM deactivation. Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity. Note: to place the module in power saving mode, set the **<fun>** parameter at value = 5 and the line **DTR** (RS232) must be set to **OFF**. Once in power saving, the **CTS** line switch to the **OFF** status to signal that the module is really in power saving condition. During the power saving condition, before sending any AT command on the serial line, the **DTR** must be set to ON (0V) to exit from power saving and must be waited for the **CTS** (RS232) line to go in **ON** status. Until the **DTR** line is **ON**, the module will not return back in the power saving condition.

+CFUN - Set Phone Functionality	SELINT 0 / 1
	Note: the power saving function does not affect the network behavior of the MODULE, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call arrives during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code
AT+CFUN?	Read command reports the current level of functionality.
AT+CFUN=?	Test command returns the list of supported values for **<fun>** For compatibility with previous versions, Test command returns **+CFUN: (1, 5)** An enhanced version of Test command has been defined: **AT+CFUN=??**, that provides the complete range of values for **<fun>**.
AT+CFUN=??	Enhanced test command returns the list of supported values for **<fun>**
Reference	3GPP TS 27.007

+CFUN - Set Phone Functionality	SELINT 2
AT+CFUN= **[<fun>[,<rst>]]**	Set command selects the level of functionality in the ME. Parameters: **<fun>** - is the power saving function mode 0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode, the AT interface is not accessible. Consequently, once you have set **<fun>** level 0, do not send further characters. Otherwise these characters remain in the input buffer and may delay the output of an unsolicited result code. The first wake-up event, or toggling **RTS** line, stops power saving and takes the ME back to full functionality level **<fun>=1**. 1 - mobile full functionality with power saving disabled (factory default) 2 - disable TX 4 - disable both TX and RX 5 - mobile full functionality with power saving enabled 7 - CYCLIC SLEEP mode: in this mode, the serial interface is periodically enabled while CTS is active. If characters are recognized on the serial interface, the ME stays active for 2 seconds after the last character was sent or received. ME exits SLEEP mode only, if AT+CFUN=1 is entered 9 – just as 0 but with different wake-up events (see SW User Guide) *The following two values are supported only for 10.01.xxx, 16.01.xxx and 13.00.xxx SW versions, starting respectively from 10.01.xx1, 16.01.xx1 and 13.00.xx7.* 10 – disable both TX and RX with power saving enabled 11- disable both TX and RX and automatically the module goes in power saving. The AT interface is not accessible. Consequently, once you have set **<fun>** level 11, it do not send further characters. Toggling **RTS** line, stops power saving and takes the ME back awake. In order to restore full

	functionality, the user must send +CFUN command with **<fun>=1** **The module sleeps about 20 seconds, verifies the RTS state and then it returns to sleep.** **<rst>** - reset flag 0 - do not reset the ME before setting it to **<fun>** functionality level 1 – reset the device. The device is fully functional after the reset. This value is available only for <fun> = 1. The parameter **<rst>** is not supported by all products or software versions; to be sure check it with the test command. Note: issuing **AT+CFUN=4[,0]** (or 10[,0], 11[,0]) actually causes the module to perform either a network deregistration and a SIM deactivation. Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity. Note: to place the module in power saving mode, set the **<fun>** parameter at value = 5 or = 10 and the line **DTR** (RS232) must be set to **OFF**. Once in power saving, the **CTS** line switch to the **OFF** status to signal that the module is really in power saving condition. During the power saving condition, before sending any **AT** command on the serial line, the **DTR** must be set to **ON** (0V) to exit from power saving and it must be waited for the **CTS** (RS232) line to go in **ON** status. Until the **DTR** line is **ON**, the module will not return back in the power saving condition. Note: the power saving function does not affect the network behaviour of the MODULE, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call incomes during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code
AT+CFUN?	Read command reports the current setting of **<fun>.**
AT+CFUN=?	Test command returns the list of supported values for **<fun>** and **<rst>**.
Reference	3GPP TS 27.007

3.5.4.4.3. Enter PIN - +CPIN

+CPIN - Enter PIN	**SELINT 0 / 1**
AT+CPIN[=<pin>[,<newpin>]]	Set command sends to the device a password which is necessary before it can be operated (SIM PIN, SIM PUK, PH-SIM PIN, etc.). If the PIN required is SIM PUK or SIM PUK2, the **<newpin>** is required. This second pin, **<newpin>**, will replace the old pin in the SIM. The command may be used to change the SIM PIN by sending it with both parameters **<pin>** and **<newpin>**.

+CPIN - Enter PIN	SELINT 0 / 1
	Parameters: <**pin**> - string type value <**newpin**> - string type value. To check the status of the PIN request use the command **AT+CPIN?** Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.
AT+CPIN?	Read command reports the PIN/PUK/PUK2 request status of the device in the form: **+CPIN:<code>** where: <**code**> - PIN/PUK/PUK2 request status code READY - ME is not pending for any password SIM PIN - ME is waiting SIM PIN to be given SIM PUK - ME is waiting SIM PUK to be given PH-SIM PIN - ME is waiting phone-to-SIM card password to be given PH-FSIM PIN - ME is waiting phone-to-very first SIM card password to be given PH-FSIM PUK - ME is waiting phone-to-very first SIM card unblocking password to be given SIM PIN2 - ME is waiting SIM PIN2 to be given; this <**code**> is returned only when the last executed command resulted in PIN2 authentication failure (i.e. **+CME ERROR: 17**) SIM PUK2 - ME is waiting SIM PUK2 to be given; this <**code**> is returned only when the last executed command resulted in PUK2 authentication failure (i.e. **+CME ERROR: 18**) PH-NET PIN - ME is waiting network personalization password to be given PH-NET PUK - ME is waiting network personalization unblocking password to be given PH-NETSUB PIN - ME is waiting network subset personalization password to be given PH-NETSUB PUK - ME is waiting network subset personalization unblocking password to be given PH-SP PIN - ME is waiting service provider personalization password to be given PH-SP PUK - ME is waiting service provider personalization unblocking password to be given PH-CORP PIN - ME is waiting corporate personalization password to be given PH-CORP PUK - ME is waiting corporate personalization unblocking password to be given PH-MCL PIN – ME is waiting Multi Country Lock password to be given Note: Pin pending status at startup depends on PIN facility setting, to change or query the default power up setting use either the **AT+CLCK=SC,<mode>, <pin>** command or the **AT@CLCK=SC,<mode>, <pin>** command.

+CPIN - Enter PIN		**SELINT 0 / 1**
AT+CPIN=?	Test command returns **OK** result code.	
Example	AT+CMEE=1 OK AT+CPIN? +CME ERROR: 10 *error: you have to insert the SIM* AT+CPIN? +CPIN: READY *you inserted the SIM and device is not waiting for PIN to be given* OK

3.5.4.4.5. Indicator Control - +CIND

+CIND - Indicator Control	SELINT 0/1/2
AT+CIND= **[<state>** **[,<state>[,…]]]**	Set command is used to control the registration state of ME indicators, in order to automatically send the **+CIEV** URC, whenever the value of the associated indicator changes. The supported indicators (**<descr>**) and their order appear from test command **AT+CIND=?** Parameter: **<state>** - registration state 0 - the indicator is deregistered; there's no unsolicited result code (**+CIEV** URC) automatically sent by the ME to the application, whenever the value of the associated indicator changes; the value can be directly queried with **+CIND?** 1 - the indicator is registered: an unsolicited result code (**+CIEV** URC) is automatically sent by the ME to the application, whenever the value of the associated indicator changes; it is still possible to query the value through **+CIND?** (default) Note: When the ME is switched on all of the indicators are in registered mode.
AT+CIND?	Read command returns the current value of ME indicators, in the format: **+CIND: <ind>[,<ind>[,…]]** Note: the order of the values **<ind>s** is the same as that in which the associated indicators appear from test command **AT+CIND=?**
AT+CIND=?	Test command returns pairs, where string value **<descr>** is a description (max. 16 chars) of the indicator and compound value is the supported values for the indicator, in the format:

+CIND - Indicator Control	SELINT 0/1/2
	+CIND: ((<descr>, (list of supported <ind>s))[,(<descr>, (list of supported <ind>s))[,…]]) where: **<descr>** - indicator names as follows (along with their **<ind>** ranges) "battchg" - battery charge level **<ind>** - battery charge level indicator range 0..5 99 - not measurable "signal" - signal quality **<ind>** - signal quality indicator range 0..7 99 - not measurable "service" - service availability **<ind>** - service availability indicator range 0 - not registered to any network 1 - registered "sounder" - sounder activity **<ind>** - sounder activity indicator range 0 - there's no any sound activity 1 - there's some sound activity "message" - message received **<ind>** - message received indicator range 0 - there is no unread short message at memory location "SM" 1 - unread short message at memory location "SM" "call" - call in progress **<ind>** - call in progress indicator range 0 - there's no calls in progress 1 - at least a call has been established "roam" - roaming **<ind>** - roaming indicator range 0 - registered to home network or not registered 1 - registered to other network "smsfull" - a short message memory storage in the MT has become full (1), or memory locations are available (0) **<ind>** - short message memory storage indicator range 0 - memory locations are available 1 - a short message memory storage in the MT has become full. "rssi" - received signal (field) strength **<ind>** - received signal strength level indicator range 0 - signal strength ≤ (-112) dBm 1..4 - signal strength in (-97) dBm..(-66) dBm (15 dBm steps) 5 - signal strength ≥ (-51) dBm 99 - not measurable
Example	*Next command causes all the indicators to be registered* AT+CIND=1,1,1,1,1,1,1,1,1,1 *Next command causes all the indicators to be de-registered* AT+CIND=0,0,0,0,0,0,0,0,0,0

+CIND - Indicator Control	SELINT 0/1/2
	Next command to query the current value of all indicators AT+CIND? CIND: 4,0,1,0,0,0,0,0,2 OK
Note	See command **+CMER**
Reference	3GPP TS 27.007

3.5.4.4.6. Mobile Equipment Event Reporting - +CMER

+CMER - Mobile Equipment Event Reporting	SELINT 0/1/2
AT+CMER= **[<mode>** **[,<keyp>** **[,<disp>** **[,<ind>** **[,<bfr>]]]]]**	Set command enables/disables sending of unsolicited result codes from TA to TE in the case of indicator state changes (n.b.: sending of URCs in the case of key pressings or display changes are currently not implemented). Parameters: **<mode>** - controls the processing of unsolicited result codes 0 - discard **+CIEV** Unsolicited Result Codes. 1 - discard **+CIEV** Unsolicited Result Codes when TA-TE link is reserved (e.g. on-line data mode); otherwise forward them directly to the TE. 2 - buffer **+CIEV** Unsolicited Result Codes in the TA when TA-TE link is reserved (e.g. on-line data mode) and flush them to the TE after reservation; otherwise forward them directly to the TE. 3 - forward **+CIEV** Unsolicited Result Codes directly to the TE; when TA is in on-line data mode each **+CIEV** URC is replaced with a **Break** (100 ms), and is stored in a buffer; once the ME goes into command mode (after **+++** was entered), all URCs stored in the buffer will be output. **<keyp>** - keypad event reporting 0 - no keypad event reporting **<disp>** - display event reporting 0 - no display event reporting **<ind>** - indicator event reporting 0 - no indicator event reporting 2 - indicator event reporting **<bfr>** - TA buffer clearing 0 - TA buffer of unsolicited result codes is cleared when <mode> 1..3 is entered Note: After AT+CMER has been switched on, URCs for all registered indicators will be issued. Although it is possible to issue the command when SIM PIN is pending, it will answer ERROR if “message” or “smsfull” indicators are enabled in AT+CIND, because with pending PIN it is not possible to give a correct indication about SMS status. To issue the command when SIM PIN is pending you have to disable “message” and “smsfull” indicators in AT+CIND first.

+CMER - Mobile Equipment Event Reporting	SELINT 0/1/2
AT+CMER?	Read command returns the current setting of parameters, in the format: **+CMER: <mode>,<keyp>,<disp>,<ind>,<bfr>**
AT+CMER=?	Test command returns the range of supported values for parameters **<mode>, <keyp>, <disp>, <ind>, <bfr>**, in the format: **+CMER: (list of supported <mode>s),(list of supported <keyp>s),** **(list of supported <disp>s),(list of supported <ind>s),(list of supported <bfr>s)**
Reference	3GPP TS 27.007

3.5.4.4.7. Select Phonebook Memory Storage - +CPBS

+CPBS - Select Phonebook Memory Storage	SELINT 0 / 1
AT+CPBS[= <storage>]	Set command selects phonebook memory storage **<storage>**, which will be used by other phonebook commands. Parameter: **<storage>** "SM" - SIM phonebook "FD" - SIM fixed dialling-phonebook (only phase 2/2+ SIM) "LD" - SIM last-dialling-phonebook (**+CPBF** is not applicable for this storage) "MC" - device missed (unanswered received) calls list **(+CPBF** is not applicable for this storage) "RC" - **ME** received calls list (**+CPBF** is not applicable for this storage) Note: If parameter is omitted then Set command has the same behaviour as Read command.
AT+CPBS?	Read command returns the actual values of the parameter **<storage>**, the number of occupied records **<used>** and the maximum index number **<total>**, in the format: **+CPBS: <storage>,<used>,<total>** Note: For **<storage>="MC"**: if there are more than one missed calls from the same number the read command will return only the last call
AT+CPBS=?	Test command returns the supported range of values for the parameters **<storage>**. Note: the presentation format of the Test command output is the set of available values for **<storage>**, each of them enclosed in parenthesis: **+CPBS: ("SM"),("FD"),("LD"),("MC"),("RC")**
Reference	3GPP TS 27.007

+CPBS - Select Phonebook Memory Storage	SELINT 2
AT+CPBS= <storage>	Set command selects phonebook memory storage **<storage>**, which will be used by other phonebook commands.

+CPBS - Select Phonebook Memory Storage	SELINT 2
	Parameter: **<storage>** "SM" - SIM phonebook "FD" - SIM fixed dialling-phonebook (only phase 2/2+ SIM) "LD" - SIM last-dialling-phonebook **(+CPBF** is not applicable for this storage) "MC" - device missed (unanswered received) calls list **(+CPBF** is not applicable for this storage) "RC" - ME received calls list **(+CPBF** is not applicable for this storage). "MB" - mailbox numbers stored on SIM; it is possible to select this storage only if the **mailbox** service is provided by the SIM (see **#MBN**).
AT+CPBS?	Read command returns the actual values of the parameter **<storage>**, the number of occupied records **<used>** and the maximum index number **<total>**, in the format: **+CPBS: <storage>,<used>,<total>** Note: For **<storage>="MC"**: if there are more than one missed calls from the same number the read command will return only the last call
AT+CPBS=?	Test command returns the supported range of values for the parameters **<storage>**.
Reference	3GPP TS 27.007

3.5.4.4.8. Read Phonebook Entries - +CPBR

+CPBR - Read Phonebook Entries	SELINT 0 / 1
AT+CPBR=<index1>[,<index2>]	Execution command returns phonebook entries in location number range **<index1>..<index2>** from the current phonebook memory storage selected with **+CPBS**. If **<index2>** is omitted, only location **<index1>** is returned. Parameters: **<index1>** - integer type value in the range of location numbers of phonebook memory **<index2>** - integer type value in the range of location numbers of phonebook memory The response format is: **+CPBR: <index>,<number>,<type>,<text>** where: **<index>** - the current position number of the PB index (to see the range of values use **+CPBR=?**) **<number>** - string type phone number in format **<type>** **<type>** - type of phone number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the alphanumeric text associated to the number; used character set should be the one selected with command **+CSCS**.

+CPBR - Read Phonebook Entries	SELINT 0 / 1
	Note: if "MC" is the current selected phonebook memory storage, all the missed calls coming from the same number will be saved as one missed call and **+CPBR** will show just one line of information. Note: If all queried locations are empty (but available), no information text lines will be returned, while if listing fails in an **ME** error, **+CME ERROR: <err>** is returned.
AT+CPBR=?	Test command returns the supported range of values of the parameters in the form: **+CPBR: (<minIndex> - <maxIndex>),<nlength>,<tlength>** where: **<minIndex>** - the minimum **<index>** number, integer type **<maxIndex>** - the maximum **<index>** number, integer type **<nlength>** - maximum **<number>** field length, integer type **<tlength>** - maximum **<name>** field length, integer type
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.
Reference	3GPP TS 27.007

+CPBR - Read Phonebook Entries	SELINT 2
AT+CPBR=<index1>[,<index2>]	Execution command returns phonebook entries in location number range **<index1>**..**<index2>** from the current phonebook memory storage selected with **+CPBS**. If **<index2>** is omitted, only location **<index1>** is returned. Parameters: **<index1>** - integer type, value in the range of location numbers of the currently selected phonebook memory storage (see **+CPBS**). **<index2>** - integer type, value in the range of location numbers of the currently selected phonebook memory storage (see **+CPBS**). The response format is: **[+CPBR: <index1>,<number>,<type>,<text>[<CR><LF>** **+CPBR: <index2>,<number>,<type>,<text>[…]]]** where: **<index*n*>** - the location number of the phonebook entry **<number>** - string type phone number of format **<type>** **<type>** - type of phone number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the alphanumeric text associated to the number; used character set should be the one selected with command **+CSCS.** Note: if "MC" is the currently selected phonebook memory storage, a sequence of missed calls coming from the same number will be saved as one missed call and

+CPBR - Read Phonebook Entries	SELINT 2
	+CPBR will show just one line of information. Note: If all queried locations are empty (but available), no information text lines will be returned, while if listing fails in an **ME** error, **+CME ERROR: <err>** is returned.
AT+CPBR=?	Test command returns the supported range of values for parameters **<index*n*>** and the maximum lengths of **<number>** and **<text>** fields, in the format: **+CPBR: (<minIndex> - <maxIndex>),<nlength>,<tlength>** where: **<minIndex>** - the minimum **<index>** number, integer type **<maxIndex>**- the maximum **<index>** number, integer type **<nlength>** - maximum **<number>** field length, integer type **<tlength>** - maximum **<name>** field length, integer type Note: for all SW versions except 13.00.xxx, the value of **<nlength>** could vary, depending on whether or not the ENS functionality has been previously enabled (see **#ENS**), in the following situations: 1. if "SM" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension1** service 2. if "FD" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension2** service 3. if "MB" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension6** service For 13.00.xxx SW version the value of **<nlength>** doesn't depend on ENS functionality setting.
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.
Reference	3GPP TS 27.007

3.5.4.4.9. Find Phonebook Entries - +CPBF

+CPBF - Find Phonebook Entries	SELINT 0 / 1
AT+CPBF= <findtext>	Execution command returns phonebook entries (from the current phonebook memory storage selected with **+CPBS**) which alphanumeric field start with string **<findtext>**. Parameter: **<findtext>** - string type, it is NOT case sensitive; used character set should be the one selected with command **+CSCS**. The command returns a report in the form: **+CPBF: <index1>,<number>,<type>,<text>[[…]<CR><LF>**

+CPBF - Find Phonebook Entries	SELINT 0 / 1
	+CPBF: <index*n*>,<number>,<type>,<text>] where **<index*n*>**, **<number>**, **<type>**, and **<text>** have the same meaning as in the command **+CPBR** report. Note: **+CPBF** is not applicable if the current selected storage (see **+CPBS**) is either "MC", either "RC" or "LD". Note: if no PB records satisfy the search criteria then an **ERROR** message is reported.
AT+CPBF=?	Test command reports the maximum lengths of **<number>** and **<text>** fields. **+CPBF: [<max_number_length>],[<max_text_length>]**
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.
Reference	3GPP TS 27.007

+CPBF - Find Phonebook Entries	SELINT 2
AT+CPBF= <findtext>	Execution command returns phonebook entries (from the current phonebook memory storage selected with **+CPBS**) which alphanumeric field start with string **<findtext>**. Parameter: **<findtext>** - string type; used character set should be the one selected with command **+CSCS.** The command returns a report in the form: **[+CPBF: <index1>,<number>,<type>,<text>[<CR><LF>** **+CPBF: <index2>,<number>,<type>,<text>[…]]]** where: **<index*n*>** - the location number of the phonebook entry **<number>** - string type phone number of format **<type>** **<type>** - type of phone number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the alphanumeric text associated to the number; used character set should be the one selected with command **+CSCS.** Note: **+CPBF** is not applicable if the current selected storage (see **+CPBS**) is either "MC", either "RC" or "LD". Note: if **<findtext>=""** the command returns all the phonebook records. Note: if no PB records satisfy the search criteria then an **ERROR** message is

+CPBF - Find Phonebook Entries	SELINT 2
	reported.
AT+CPBF=?	Test command reports the maximum lengths of **<number>** and **<text>** fields, in the format: **+CPBF: [<nlength>],[<tlength>]** where: **<nlength>** - maximum length of field **<number>**, integer type **<tlength>** - maximum length of field **<text>**, integer type Note: for all SW versions except 13.00.xxx, the value of **<nlength>** could vary, depending on whether or not the ENS functionality has been previously enabled (see **#ENS**), in the following situations: 1. if "SM" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension1** service 2. if "FD" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension2** service 1. if "MB" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension6** service For 13.00.xxx SW version the value of **<nlength>** doesn't depend on ENS functionality setting.
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.
Reference	3GPP TS 27.007

3.5.4.4.10. Write Phonebook Entry - +CPBW

+CPBW - Write Phonebook Entry	SELINT 0 / 1
AT+CPBW= **[<index>]** **[,<number> [,<type>** **[,<text>]]]**	Execution command stores at the position **<index>** a phonebook record defined by **<number>**, **<type>** and **<text>** parameters Parameters: **<index>** - record position **<number>** - string type, phone number in the format **<type>** **<type>** - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the text associated to the number, string type; used character set should be the one selected with command **+CSCS**. Note: If record number **<index>** already exists, it will be overwritten. Note: if only **<index>** is given, the record number **<index>** is deleted. Note: if **<index>** is omitted or **<index>**=0, the number **<number>** is stored in the

+CPBW - Write Phonebook Entry	SELINT 0 / 1
	first free phonebook location. (example at+cpbw=0,2,129,"Testo" and at+cpbw=,2,129,"Testo") Note: omission of all the subparameters causes an **ERROR** result code.
AT+CPBW=?	Test command returns location range supported by the current storage as a compound value, the maximum length of **<number>** field, supported number format of the storage and maximum length of **<text>** field. The format is: **+CPBW: (list of supported <index>s),<nlength>,** **(list of supported <type>s),<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<number>** **<tlength>** - integer type value indicating the maximum length of field **<text>**
Reference	3GPP TS 27.007
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.

+CPBW - Write Phonebook Entry	SELINT 2
AT+CPBW= **[<index>]** **[,<number> [,<type>** **[,<text>]]]**	Execution command writes phonebook entry in location number **<index>** in the current phonebook memory storage selected with **+CPBS**. Parameters: **<index>** - integer type, value in the range of location numbers of the currently selected phonebook memory storage (see **+CPBS**). **<number>** - string type, phone number in the format **<type>** **<type>** - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the text associated to the number, string type; used character set should be the one selected with command **+CSCS**. Note: If record number **<index>** already exists, it will be overwritten. Note: if either **<number>**, **<type>** and **<text>** are omitted, the phonebook entry in location **<index>** is deleted. Note: if **<index>** is omitted or **<index>**=0, the number **<number>** is stored in the first free phonebook location. (example at+cpbw=0,"+390404192701",129,"Text" and at+cpbw=,"+390404192701",129,"Text") Note: if either “LD”, “MC” or “RC” memory storage has been selected (see **+CPBS**) it is possible just to delete the phonebook entry in location **<index>**, therefore parameters **<number>**, **<type>** and **<text>** must be omitted.

+CPBW - Write Phonebook Entry	SELINT 2
AT+CPBW=?	Test command returns location range supported by the current storage as a compound value, the maximum length of **<number>** field, supported number format of the storage and maximum length of **<text>** field. The format is: **+CPBW: (list of supported <index>s),<nlength>,** **(list of supported <type>s),<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<number>**. **<tlength>** - integer type value indicating the maximum length of field **<text>** Note: for all SW versions except 13.00.xxx, the value of **<nlength>** could vary, depending on whether or not the ENS functionality has been previously enabled (see **#ENS**), in the following situations: 1. if "SM" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension1** service 2. if "FD" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension2** service 1. if "MB" memory storage has been selected (see **+CPBS**) and the **SIM** supports the **Extension6** service For 13.00.xxx SW version the value of **<nlength>** doesn't depend on ENS functionality setting.
Reference	3GPP TS 27.007
Note	Remember to select the PB storage with **+CPBS** command before issuing PB commands.

3.5.4.4.11. Clock Management - +CCLK

+CCLK - Clock Management	SELINT 0 / 1
AT+CCLK **[=<time>]**	Set command sets the real-time clock of the ME. Parameter: **<time>** - current time as quoted string in the format : "yy/MM/dd,hh:mm:ss±zz" yy - year (two last digits are mandatory), range is 00..99 MM - month (two last digits are mandatory), range is 01..12 dd - day (two last digits are mandatory); The range for dd(day) depends either on the month and on the year it refers to. Available ranges are: (01..28) (01..29) (01..30) (01..31) Trying to enter an out of range value will raise an error hh - hour (two last digits are mandatory), range is 00..23

+CCLK - Clock Management	SELINT 0 / 1
	mm - minute (two last digits are mandatory), range is 00..59 ss - seconds (two last digits are mandatory), range is 00..59 ±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48 Note: If the parameter is omitted the behaviour of Set command is the same as Read command.
AT+CCLK?	Read command returns the current setting of the real-time clock, in the format **<time>**. Note: the three last characters of **<time>** are not returned by **+CCLK?** because the **ME** doesn't support time zone information.
AT+CCLK=?	Test command returns the **OK** result code.
Example	AT+CCLK="02/09/07,22:30:00+00" OK AT+CCLK? +CCLK: "02/09/07,22:30:25" OK
Reference	3GPP TS 27.007

+CCLK - Clock Management	SELINT 2
AT+CCLK=<time>	Set command sets the real-time clock of the **ME**. Parameter: **<time>** - current time as quoted string in the format: "yy/MM/dd,hh:mm:ss±zz" yy - year (two last digits are mandatory), range is 00..99 MM - month (two last digits are mandatory), range is 01..12 dd - day (two last digits are mandatory); The range for dd(day) depends either on the month and on the year it refers to. Available ranges are: (01..28) (01..29) (01..30) (01..31) Trying to enter an out of range value will raise an error hh - hour (two last digits are mandatory), range is 00..23 mm - minute (two last digits are mandatory), range is 00..59 ss - seconds (two last digits are mandatory), range is 00..59 ±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48
AT+CCLK?	Read command returns the current setting of the real-time clock, in the format **<time>**. Note: the three last characters of **<time>**, i.e. the time zone information, are returned by **+CCLK?** only if the **#NITZ** URC *'extended'* format has been enabled

+CCLK - Clock Management	SELINT 2
	(see **#NITZ**).
AT+CCLK=?	Test command returns the **OK** result code.
Example	AT+CCLK="02/09/07,22:30:00+00" OK AT+CCLK? +CCLK: "02/09/07,22:30:25" OK
Reference	3GPP TS 27.007

3.5.4.4.12. Alarm Management - +CALA

+CALA - Alarm Management	SELINT 0 / 1
AT+CALA[=<time>[,<n>[,<type>[,<text>[,<recurr>[,<silent>]]]]]]	Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set. When the RTC time reaches the alarm time then the alarm starts, the behaviour of the MODULE depends upon the setting **<type>** and if the device was already **ON** at the moment when the alarm time had come. Parameters: **<time>** - current alarm time as quoted string "" - (empty string) deletes the current alarm and resets all the **+CALA** parameters to the "factory default" configuration "hh:mm:ss±zz" - format to be used only when issuing **+CALA** with parameter **<recurr>** too. "yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same as defined for **+CCLK** (see) **<n>** - index of the alarm 0 - The only value supported is 0. **<type>** - alarm behaviour type 0 - reserved for other equipment use. 1 - the MODULE simply wakes up fully operative as if the **ON/OFF** button had been pressed. If the device is already **ON** at the alarm time, then it does nothing (default). 2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE issues an unsolicited code every 3s: **+CALA: <text>** where **<text>** is the **+CALA** optional parameter previously set. The device keeps on sending the unsolicited code every 3s until a **#WAKE** or **#SHDN** command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90 seconds

+CALA - Alarm Management	SELINT 0 / 1
	then it shuts down. 3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE starts playing the alarm tone on the selected path for the ringer (see **#SRP**) The device keeps on playing the alarm tone until a **#WAKE** or **#SHDN** command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s then it shuts down. 4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE brings the pin **GPIO6** high, provided its **<direction>** has been set to alarm output, and keeps it in this state until a **#WAKE** or **#SHDN** command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s then it shuts down. 5 - the MODULE will make both the actions as for **<type>=2** and **<type>=3**. 6 - the MODULE will make both the actions as for **<type>=2** and **<type>=4**. 7 - the MODULE will make both the actions as for **<type>=3** and **<type>=4**. **<text>** - unsolicited alarm code text string. It has meaning only if **<type>** is equal to 2 or 5 or 6. **<recurr>** - string type value indicating day of week for the alarm in one of the following formats: "<1..7>[,<1..7>[, …]]" - it sets a recurrent alarm for one or more days in the week; the digits 1 to 7 corresponds to the days in the week (Monday is 1). "0" - it sets a recurrent alarm for all days in the week. **<silent>** - integer type indicating if the alarm is silent or not. 0 - the alarm will not be silent; 1 - the alarm will be silent. During the "alarm mode" the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SMS, the only commands that can be issued to the MODULE in this state are the **#WAKE** and **#SHDN**, every other command must not be issued during this state. Note: If the parameter is omitted the behavior of Set command is the same as Read command. Note: it is mandatory to set at least once the RTC (issuing **+CCLK** or using the automatic date/time updating – see **#NITZ**) before it is possible to issue **+CALA**
AT+CALA?	Read command returns the list of current active alarm settings in the ME, in the format: **[+CALA: <time>,<n>,<type>,[<text>],<recurr>,<silent>]** Note: if no alarm is present a **<CR><LF>** is issued.
AT+CALA=?	Test command returns the list of supported index values (currently just 0), alarm

+CALA - Alarm Management	SELINT 0 / 1
	types and maximum length of the text to be displayed, in the format: **+CALA: (list of supported <n>s),(list of supported <type>s),<tlength>** where: **<n>** and **<type>** as before **<tlength>** - maximum **<text>** field length, integer type Note: an enhanced version of Test command has been defined, **AT+CALA=??**, providing the range of available values for **<rlenght>** and **<silent>** too.
AT+CALA=??	Test command returns the list of supported index values (currently just 0), alarm types, maximum length of the text to be displayed, maximum length of **<recurr>** and supported **<silent>**s, in the format: **+CALA: (list of supported <n>s),(list of supported <type>s),<tlength>, <rlength>,(list of supported <silent>s)** where: **<n>**, **<type>, <tlength>** and **<silent>** as before **<rlength>** - maximum **<recurr>** field length, integer type
Example	AT+CALA="02/09/07,23:30:00+00" OK
Reference	ETSI 07.07, ETSI 27.007

+CALA - Alarm Management	SELINT 2
AT+CALA= <time>[,<n>[,<type> [,<text>[,<recurr> [,<silent>]]]]]	Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set. When the RTC time reaches the alarm time then the alarm starts, the behaviour of the MODULE depends upon the setting **<type>** and if the device was already ON at the moment when the alarm time had come. Parameters: **<time>** - current alarm time as quoted string “” - (empty string) deletes the current alarm and resets all the **+CALA** parameters to the “factory default” configuration "hh:mm:ss±zz" - format to be used only when issuing **+CALA** with parameter **<recurr>** too. "yy/MM/dd,hh:mm:ss±zz" - generic format: it’s the same as defined for **+CCLK** (see) **<n>** - index of the alarm 0 - The only value supported is 0. **<type>** - alarm behaviour type 0 - reserved for other equipment use. 1 - the MODULE simply wakes up fully operative as if the ON/OFF button had been pressed. If the device is already ON at the alarm time, then it does nothing

+CALA - Alarm Management	SELINT 2

(default).
2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE issues an unsolicited code every 3s:

+CALA: <text>

where **<text>** is the **+CALA** optional parameter previously set.

The device keeps on sending the unsolicited code every 3s until a **#WAKE** or **#SHDN** command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s then it shuts down.
3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE starts playing the alarm tone on the selected path for the ringer (see command **#SRP**)
The device keeps on playing the alarm tone until a **#WAKE** or **#SHDN** command is received or a 90 s time-out occurs. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s then it shuts down.
4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE brings the pin GPIO6 high, provided its **<direction>** has been set to alarm output, and keeps it in this state until a **#WAKE** or **#SHDN** command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s then it shuts down.
5 - the MODULE will make both the actions as for type=2 and **<type>=3**.
6 - the MODULE will make both the actions as for type=2 and **<type>=4**.
7 - the MODULE will make both the actions as for type=3 and **<type>=4**.
8 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE sets **High** the **RI** output pin. The **RI** output pin remains **High** until next **#WAKE** issue or until a 90s timer expires. If the device is in "alarm mode" and it does not receive the **#WAKE** command within 90s. After that it shuts down.

<text> - unsolicited alarm code text string. It has meaning only if **<type>** is equal to 2 or 5 or 6.

<recurr> - string type value indicating day of week for the alarm in one of the following formats:
"<1..7>[,<1..7>[, …]]" - it sets a recurrent alarm for one or more days in the week; the digits 1 to 7 corresponds to the days in the week (Monday is 1).
"0" - it sets a recurrent alarm for all days in the week.

<silent> - integer type indicating if the alarm is silent or not.
0 - the alarm will not be silent;
1 - the alarm will be silent.

During the "alarm mode" the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SMS, the only commands that can be issued to the MODULE in this state are the

+CALA - Alarm Management	SELINT 2
	#WAKE and **#SHDN**, every other command must not be issued during this state. Note: it is mandatory to set at least once the RTC (issuing **+CCLK** or using the automatic date/time updating – see **#NITZ**) before it is possible to issue **+CALA**
AT+CALA?	Read command returns the list of current active alarm settings in the ME, in the format: **[+CALA: <time>,<n>,<type>,[<text>],<recurr>,<silent>]**
AT+CALA=?	Test command returns the list of supported index values (currently just 0), alarm types, maximum length of the text to be displayed, maximum length of **<recurr>** and supported **<silent>**s, in the format: **+CALA: (list of supported <n>s),(list of supported <type>s),<tlength>, <rlength>,(list of supported <silent>s)**
Example	AT+CALA="02/09/07,23:30:00+00" OK
Reference	ETSI 07.07, ETSI 27.007

3.5.4.4.13. Postpone alarm - +CAPD

+CAPD – postpone or dismiss an alarm	SELINT 2
AT+CAPD=[<sec>]	Set command postpones or dismisses a currently active alarm. Parameters: **<sec>**: integer type value indicating the number of seconds to postpone the alarm (maximum 60 seconds). If <sec> is set to 0 (default), the alarm is dismissed.
AT+CAPD=?	Test command reports the supported range of values for parameter **<sec>**

3.5.4.4.14. Setting date format - +CSDF

+CSDF – setting date format	SELINT 2
AT+CSDF=[<mode> [,<auxmode>]]	This command sets the date format of the date information presented to the user, which is specified by use of the **<mode>** parameter. The **<mode>** affects the date format on the phone display and doesn't affect the date format of the AT command serial interface, so it not used. The command also sets the date format of the TE-TA interface, which is specified by use of the **<auxmode>** parameter (i.e., the **<auxmode>** affects the **<time>** of AT+CCLK and AT+CALA). If the parameters are omitted then this sets the default value of **<mode>**.

	Parameters: **<mode>:** 1 DD-MMM-YYYY (default) 2 DD-MM-YY 3 MM/DD/YY 4 DD/MM/YY 5 DD.MM.YY 6 YYMMDD 7 YY-MM-DD **<auxmode>:** 1 yy/MM/dd (default) 2 yyyy/MM/dd Note: The <time> format of +CCLK and +CALA is "yy/MM/dd,hh:mm:ss+zz" when <auxmode>=1 and it is "yyyy/MM/dd,hh:mm:ss+zz" when <auxmode>=2.
AT+CSDF?	Read command reports the currently selected **<mode>** and **<auxmode>** in the format: **+CSDF: <mode>,<auxmode>**
AT+CSDF=?	Test command reports the supported range of values for parameters **<mode>** and **<auxmode>**

3.5.4.4.15. Setting time format - +CSTF

+CSTF – setting time format	**SELINT 2**
AT+CSTF=[<mode>]	This command sets the time format of the time information presented to the user, which is specified by use of the **<mode>** parameter. The **<mode>** affects the time format on the phone display and doesn't affect the time format of the AT command serial interface, so it not actually not used. Parameters: **<mode>:** 1 HH:MM (24 hour clock; default) 2 HH:MM a.m./p.m.
AT+CSTF?	Read command reports the currently selected <mode> in the format: **+CSTF: <mode>**
AT+CSTF=?	Test command reports the supported range of values for parameter **<mode>**

3.5.4.4.16. Time Zone reporting - +CTZR

+CTZR – Time Zone reporting	SELINT 2
AT+CTZR=<onoff>	This command enables and disables the time zone change event reporting. If the reporting is enabled the MT returns the unsolicited result code +CTZV: <tz> whenever the time zone is changed. Parameters: **<onoff>:** 0 Disable time zone change event reporting (default) 1 Enable time zone change event reporting
AT+CTZR?	Read command reports the currently selected **<onoff>** in the format: **+CTZR: <onoff>**
AT+CTZR=?	Test command reports the supported range of values for parameter **<onoff>**

3.5.4.4.17. Automatic Time Zone update - +CTZU

+CTZU – automatic Time Zone update	SELINT 2
AT+CTZU=<onoff>	This command enables and disables automatic time zone update via NITZ. Parameters: **<onoff>:** 0 Disable automatic time zone update via NITZ (default) 1 Enable automatic time zone update via NITZ Note: despite of the name, the command AT+CTZU=1 enables automatic update of the date and time set by AT+CCLK command (not only time zone). This happens when a Network Identity and Time Zone (NITZ) message is sent by the network. This command is the ETSI standard equivalent of Telit custom command AT#NITZ=1. If command AT+CTZU=1, or AT#NITZ=1 (or both) has been issued, NITZ message will cause a date and time update.
AT+CTZU?	Read command reports the currently selected **<onoff>** in the format: **+CTZU: <onoff>**
AT+CTZU=?	Test command reports the supported range of values for parameter **<onoff>**

3.5.4.4.18. Restricted SIM Access - +CRSM

+CRSM - Restricted SIM Access		SELINT 0 / 1 / 2
AT+CRSM=<command>	Execution command transmits to the **ME** the SIM **<command>** and its required parameters. **ME** handles internally all **SIM-ME** interface locking and file selection	

+CRSM - Restricted SIM Access	SELINT 0 / 1 / 2
[,<fileid>[,<P1>,<P2>,<P3>[,<data>]]]	routines. As response to the command, **ME** sends the actual SIM information parameters and response data. Parameters: **<command>** - command passed on by the **ME** to the SIM 176 - READ BINARY 178 - READ RECORD 192 - GET RESPONSE 214 - UPDATE BINARY 220 - UPDATE RECORD 242 - STATUS **<fileid>** - identifier of an elementary data file on SIM. Mandatory for every command except STATUS. **<P1>**,**<P2>**,**<P3>** - parameter passed on by the **ME** to the SIM; they are mandatory for every command except GET RESPONSE and STATUS 0..255 **<data>** - information to be read/written to the SIM (hexadecimal character format). The response of the command is in the format: **+CRSM: <sw1>,<sw2>[,<response>]** where: **<sw1>**,**<sw2>** - information from the SIM about the execution of the actual command either on successful or on failed execution. **<response>** - on a successful completion of the command previously issued it gives the requested data (hexadecimal character format). It's not returned after a successful UPDATE BINARY or UPDATE RECORD command. Note: this command requires PIN authentication. However commands READ BINARY and READ RECORD can be issued before PIN authentication and if the SIM is blocked (after three failed PIN authentication attempts) to access the contents of the Elementary Files. Note: use only decimal numbers for parameters **<command>**, **<fileid>**, **<P1>**, **<P2>** and **<P3>**.
AT+CRSM=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007, GSM 11.11

3.5.4.4.19. Alert Sound Mode - +CALM

+CALM - Alert Sound Mode	SELINT 0 / 1
AT+CALM[=<mode>]	Set command is used to select the general alert sound mode of the device. Parameter: **<mode>** 0 - normal mode 1 - silent mode; no sound will be generated by the device, except for alarm sound 2 - stealth mode; no sound will be generated by the device Note: if silent mode is selected then incoming calls will not produce alerting sounds but only the unsolicited messages **RING** or **+CRING**. Note: If parameter is omitted then the behaviour of Set command is the same as Read command.
AT+CALM?	Read command returns the current value of parameter **<mode>**.
AT+CALM=?	Test command returns the supported values for the parameter **<mode>** as compound value. For compatibility with previous versions, Test command returns **+CALM: (0,1)** An enhanced version of Test command has been defined: **AT+CALM=??**, that provides the complete range of values for **<mode>**.
AT+CALM=??	Enhanced test command returns the complete range of values for the parameter **<mode>** as compound value: **+CALM: (0-2)**
Reference	3GPP TS 27.007

+CALM - Alert Sound Mode	SELINT 2
AT+CALM=<mode>	Set command is used to select the general alert sound mode of the device. Parameter: **<mode>** 0 - normal mode 1 - silent mode; no sound will be generated by the device, except for alarm sound 2 - stealth mode; no sound will be generated by the device Note: if silent mode is selected then incoming calls will not produce alerting sounds but only the unsolicited messages **RING** or **+CRING**.
AT+CALM?	Read command returns the current value of parameter **<mode>**.
AT+CALM=?	Test command returns the supported values for the parameter **<mode>** as compound value. **+CALM: (0-2)**
Reference	3GPP TS 27.007

3.5.4.4.20. Ringer Sound Level - +CRSL

+CRSL - Ringer Sound Level	SELINT 0
AT+CRSL[= <level>]	Set command is used to select the incoming call ringer sound level of the device. Parameter: **<level>** - ringer sound level 0 - Off 1 - low 2 - middle 3 - high 4 - progressive Note: if parameter is omitted then the behaviour of Set command is the same as Read command
AT+CRSL?	Read command reports the current **<level>** setting of the call ringer in the format: **+CRSL: <level>**
AT+CRSL=?	Test command reports **<level>** supported values as compound value. For compatibility with previous versions, Test command returns **+CRSL: (0-3)** An enhanced version of Test command has been defined: **AT+CRSL=??**, that provides the complete range of values for **<level>**.
AT+CRSL=??	Enhanced Test command returns the complete range of supported values for the parameter **<mode>**: **+CRSL: (0-4)**
Reference	3GPP TS 27.007

+CRSL - Ringer Sound Level	SELINT 1
AT+CRSL[= <level>]	Set command is used to select the incoming call ringer sound level of the device. Parameter: **<level>** - ringer sound level 0 - Off 1 - low 2 - middle 3 - high 4 - progressive Note: if parameter is omitted then the behaviour of Set command is the same as Read command
AT+CRSL?	Read command reports the current **<level>** setting of the call ringer in the format: **+CRSL: <level>**
AT+CRSL=?	Test command reports **<level>** supported values as compound value, in the format:

+CRSL - Ringer Sound Level	SELINT 1
	+CRSL: (0-4) Note: an enhanced version of Test command has been defined: **AT+CRSL=??**.
AT+CRSL=??	Enhanced Test command returns the complete range of supported values for the parameter **<mode>**: **+CRSL: (0-4)**
Reference	3GPP TS 27.007

+CRSL - Ringer Sound Level	SELINT 2
AT+CRSL=<level>	Set command is used to select the incoming call ringer sound level of the device. Parameter: **<level>** - ringer sound level 0 - Off 1 - low 2 - middle 3 - high 4 - progressive
AT+CRSL?	Read command reports the current **<level>** setting of the call ringer in the format: **+CRSL: <level>**
AT+CRSL=?	Test command reports **<level>** supported values as compound value. **+CRSL: (0-4)**
Reference	3GPP TS 27.007

3.5.4.4.21. Loudspeaker Volume Level - +CLVL

+CLVL - Loudspeaker Volume Level	SELINT 0 / 1
AT+CLVL[= <level>]	Set command is used to select the volume of the internal loudspeaker audio output of the device. Parameter: **<level>** - loudspeaker volume 0..*max* - the value of *max* can be read by issuing the Test command **AT+CLVL=?** Note: If the parameter is omitted the behavior of Set command is the same as Read command.
AT+CLVL?	Read command reports the current **<level>** setting of the loudspeaker volume in the format: **+CLVL: <level>**
AT+CLVL=?	Test command reports **<level>** supported values range in the format: **+CLVL: (0-*max*)**

+CLVL - Loudspeaker Volume Level	SELINT 0 / 1
Reference	3GPP TS 27.007

+CLVL - Loudspeaker Volume Level	SELINT 2
AT+CLVL=<level>	Set command is used to select the volume of the internal loudspeaker audio output of the device. Parameter: **<level>** - loudspeaker volume 0..*max* - the value of *max* can be read by issuing the Test command **AT+CLVL=?**
AT+CLVL?	Read command reports the current **<level>** setting of the loudspeaker volume in the format: **+CLVL: <level>**
AT+CLVL=?	Test command reports **<level>** supported values range in the format: **+CLVL: (0-*max*)**
Reference	3GPP TS 27.007

3.5.4.4.22. Microphone Mute Control - +CMUT

+CMUT - Microphone Mute Control	SELINT 0 / 1
AT+CMUT[=[<n>]]	Set command enables/disables the muting of the microphone audio line during a voice call. Parameter: **<n>** 0 - mute off, microphone active (factory default) 1 - mute on, microphone muted. Note: this command mutes/activates both microphone audio paths, internal mic and external mic. Note: issuing **AT+CMUT<CR>** is the same as issuing the Read command. Note: issuing **AT+CMUT=<CR>** is the same as issuing the command **AT+CMUT=0<CR>**.
AT+CMUT?	Read command reports whether the muting of the microphone audio line during a voice call is enabled or not, in the format: **+CMUT: <n>**
AT+CMUT=?	Test command reports the supported values for **<n>** parameter.
Reference	3GPP TS 27.007

+CMUT - Microphone Mute Control	SELINT 2
AT+CMUT=<n>	Set command enables/disables the muting of the microphone audio line during a voice call.

+CMUT - Microphone Mute Control	SELINT 2
	Parameter: **<n>** 0 - mute off, microphone active (factory default) 1 - mute on, microphone muted. Note: this command mutes/activates both microphone audio paths, internal mic and external mic.
AT+CMUT?	Read command reports whether the muting of the microphone audio line during a voice call is enabled or not, in the format: **+CMUT: <n>**
AT+CMUT=?	Test command reports the supported values for **<n>** parameter.
Reference	3GPP TS 27.007

3.5.4.4.23. Silence command - +CSIL

+CSIL – silence command	SELINT 2
AT+CSIL=[<mode>]	This command enables/disables the silent mode. When the phone is in silent mode, all signalling tones from MT are suppressed. Parameters: **<mode>:** 0 Silent mode off (default) 1 Silent mode on
AT+CSIL?	Read command reports the currently selected **<mode>** in the format: **+CSIL: <mode>**
AT+CSIL=?	Test command reports the supported range of values for parameter **<mode>**

3.5.4.4.24. Accumulated Call Meter - +CACM

+CACM - Accumulated Call Meter	SELINT 0 / 1
AT+CACM[=<pwd>]	Set command resets the Advice of Charge related Accumulated Call Meter stored in SIM (ACM): it contains the total number of home units for both the current and preceding calls. Parameter: **<pwd>** - to access this command PIN2 is required; if PIN2 has been already input once after startup, it is required no more Note: If the parameter is omitted the behavior of Set command is the same as Read command.
AT+CACM?	Read command reports the current value of the SIM ACM in the format:

+CACM - Accumulated Call Meter	SELINT 0 / 1
	+CACM: <acm> where: **<acm>** - accumulated call meter in home units, string type: three bytes of the ACM value in hexadecimal format (e.g. "00001E" indicates decimal value 30) Note: the value **<acm>** is in units whose price and currency are defined with command **+CPUC**
AT+CACM=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

+CACM - Accumulated Call Meter	SELINT 2
AT+CACM= **[<pwd>]**	Set command resets the Advice of Charge related Accumulated Call Meter stored in SIM (ACM): it contains the total number of home units for both the current and preceding calls. Parameter: **<pwd>** - to access this command PIN2; if PIN2 has been already input once after startup, it is required no more
AT+CACM?	Read command reports the current value of the SIM ACM in the format: **+CACM: <acm>** where: **<acm>** - accumulated call meter in home units, string type: three bytes of the ACM value in hexadecimal format (e.g. "00001E" indicates decimal value 30) Note: the value **<acm>** is in home units; price per unit and currency are defined with command **+CPUC**
AT+CACM=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.4.25. Accumulated Call Meter Maximum - +CAMM

+CAMM - Accumulated Call Meter Maximum	SELINT 0 / 1
AT+CAMM[= **<acmmax>** **[,<pwd>]]**	Set command sets the Advice of Charge related Accumulated Call Meter Maximum Value stored in SIM (ACMmax). This value represents the maximum number of home units allowed to be consumed by the subscriber. When ACM reaches **<acmmax>** value further calls are prohibited. Parameter: **<acmmax>** - ACMmax value, integer type: it is the maximum number of home units allowed to be consumed by the subscriber.

+CAMM - Accumulated Call Meter Maximum	SELINT 0 / 1
	<pwd> - PIN2; if PIN2 has been already input once after startup, it is required no more Note: **<acmmax>=0** value disables the feature. Note: if the parameters are omitted the behavior of Set command is the same as Read command.
AT+CAMM?	Read command reports the ACMmax value stored in SIM in the format: **+CAMM : <acmm>** where: **<acmm>** - ACMmax value in home units, string type: ACMmax value in decimal format.
Reference	3GPP TS 27.007

+CAMM - Accumulated Call Meter Maximum	SELINT 2
AT+CAMM=[<acmmax>[,<pwd>]]	Set command sets the Advice of Charge related Accumulated Call Meter Maximum Value stored in SIM (ACMmax). This value represents the maximum number of home units allowed to be consumed by the subscriber. When ACM reaches **<acmmax>** value further calls are prohibited. Parameter: **<acmmax>** - ACMmax value, integer type: it is the maximum number of home units allowed to be consumed by the subscriber. **<pwd>** - PIN2; if PIN2 has been already input once after startup, it is required no more Note: **<acmmax>** = 0 value disables the feature.
AT+CAMM?	Read command reports the ACMmax value stored in SIM in the format: **+CAMM : <acmm>** where: **<acmm>** - ACMmax value in home units, string type: three bytes of the ACMmax value in hexadecimal format (e.g. “00001E” indicates decimal value 30)
AT+CAMM=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.4.26. Price per Unit and Currency Table - +CPUC

+CPUC - Price Per Unit And Currency Table	SELINT 0 / 1
AT+CPUC[=<currency>,<ppu>[,<pwd>]]	Set command sets the values of Advice of Charge related Price per Unit and Currency Table stored in SIM (PUCT). The PUCT information can be used to convert the home units (as used in commands **+CAOC**, **+CACM** and **+CAMM**) into currency units.

+CPUC - Price Per Unit And Currency Table	SELINT 0 / 1
	Parameters: <**currency**> - string type; three-character currency code (e.g. LIT, USD, DEM etc..); used character set should be the one selected with command **+CSCS**. <**ppu**> - price per unit, string type (dot is used as decimal separator) e.g. "1989.27" <**pwd**> - SIM PIN2; if PIN2 has been already input once after startup, it is required no more Note: if the parameters are omitted the behavior of Set command is the same as Read command.
AT+CPUC?	Read command reports the current values of <**currency**> and <**ppu**> parameters in the format: **+CPUC : <currency>,<ppu>**
Reference	3GPP TS 27.007

+CPUC - Price Per Unit And Currency Table	SELINT 2
AT+CPUC= <currency>, <ppu>[,<pwd>]	Set command sets the values of Advice of Charge related Price per Unit and Currency Table stored in SIM (PUCT). The PUCT information can be used to convert the home units (as used in commands **+CAOC**, **+CACM** and **+CAMM**) into currency units. Parameters: <**currency**> - string type; three-character currency code (e.g. "LIT", "L. ", "USD", "DEM" etc..); used character set should be the one selected with command **+CSCS**. <**ppu**> - price per unit, string type (dot is used as decimal separator) e.g. "1989.27" <**pwd**> - SIM PIN2; if PIN2 has been already input once after startup, it is required no more
AT+CPUC?	Read command reports the current values of <**currency**> and <**ppu**> parameters in the format: **+CPUC : <currency>,<ppu>**
AT+CPUC=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.4.27. Call meter maximum event - +CCWE

+CCWE – Call Meter maximum event	SELINT 2
AT+CCWE=<mode>	Set command is used to enable/disable sending of an unsolicited result code +CCWV shortly before the ACM (Accumulated Call Meter) maximum value is reached. The warning is issued approximately when 30

	seconds call time remains. It is also issued when starting a call if less than 30 seconds call time remains. Parameters: **<mode>:** 0 Disable the call meter warning event (default) 1 Enable the call meter warning event Note: the set command will respond with an error if the Accumulated Call Meter service is not active in SIM
AT+CCWE?	Read command reports the currently selected <mode> in the format: **+CCWE: <mode>**
AT+CCWE=?	Test command reports the supported range of values for parameter **<mode>**

3.5.4.4.28. Available AT Commands - +CLAC

+CLAC - Available AT Commands	**SELINT 2**
AT+CLAC	Execution command causes the ME to return the AT commands that are available for the user, in the following format: **<AT cmd1>[<CR><LF><AT cmd2>[…]]** where: **<AT cmd*n*>** - defines the AT command including the prefix **AT**
AT+CLAC=?	Test command returns the **OK** result code
Reference	3GPP TS 27.007

3.5.4.4.29. Delete Alarm - +CALD

+CALD - Delete Alarm	**SELINT 2**
AT+CALD=<n>	Execution command deletes an alarm in the ME Parameter: **<n>** - alarm index 0
AT+CALD=?	Test command reports the range of supported values for **<n>** parameter.
Reference	3G TS 27.007

3.5.4.4.30. Read ICCID - +CCID

+CCID - Read ICCID (Integrated Circuit Card Identification)	**SELINT 0 / 1 / 2**
AT+CCID	Execution command reads on SIM the ICCID (card identification number that

+CCID - Read ICCID (Integrated Circuit Card Identification)		SELINT 0 / 1 / 2
	provides a unique identification number for the SIM)	
AT+ CCID?	Read command has the same effect as Execution command.	
AT+CCID=?	Test command reports **OK**.	

3.5.4.4.31. Generic SIM access - +CSIM

+CSIM – Generic SIM access	SELINT 0 / 1 / 2
AT+CSIM=<lock>	Between two successive +CSIM command the SIM-ME interface must be locked to avoid commands can modify wrong SIM file. The locking and unlocking of the SIM-ME interface must be done explicitly respectively at the beginning and at the end of the +CSIM commands sequence. Parameters: <**lock**>=1 locking of the interface <**lock**>=0 unlocking of the interface In case that TE application does not use the unlock command in a certain timeout value, ME releases the locking.
AT+CSIM=<length>, <command>	The ME shall send the <**command**> as it is to the SIM/UICC. As response to the command, ME sends back the actual SIM/UICC <**response**> to the TA as it is. Parameters: **<lenght>:** number of the characters that are sent to TE in <command> or <response> (two times the actual length of the command or response) **<command>:** command passed on by the ME to the SIM/UICC in the format as described in GSM TS 11.11 or 3G TS 31.101 (hexadecimal character format) The response of the command is in the format: **+CSIM: <length>,<response>** where: <**response**> : response to the command passed on by the SIM to the ME in the format as described in GSM TS 11.11 or 3G TS 31.101 (hexadecimal character format). Error case: *+CME ERROR: <err>* possible <err> values (numeric format followed by verbose format): 3 operation not allowed *(operation mode is not allowed by the ME, wrong interface lock/unlock status)* 4 operation not supported *(wrong format or parameters of the command)* 13 SIM failure *(SIM no response)*

+CSIM – Generic SIM access	SELINT 0 / 1 / 2
AT+CSIM=?	Test command returns the **OK** result code.
Example	***Lock SIM interface*** **AT+CSIM=1** **OK** **<u>2G SIM (TS 11.11):</u>** AT#ENAUSIM? +ENAUSIM: 0 OK *STATUS* AT+CSIM=10,A0F2000016 +CSIM:48,"000002A87F20020000000000000993002208008 38A838A9000" OK *SELECT EF 6F07* AT+CSIM=14,A0A40000026F07 +CSIM: 4,"9F0F" OK *GET RESPONSE* AT+CSIM=10,A0C000000F +CSIM: 34,"000000096F0704001A001A010200009000" OK *SELECT EF 6F30* AT+CSIM=14,A0A40000026F30 +CSIM: 4,"9F0F" OK *READ BINARY* AT+CSIM=10,A0B00000FC +CSIM:508,"FFFFFF1300831300901300541300301300651300381300801301801 3000113110913013013009813007713005913004313008113009513014013002313 0016330420130041FFFFFFFFFFFF21436542F41922F28822F201FFFFFFFFFFFF FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF FFFFFFFFFFFFFFFFFF9000"

Note	After the locking of the SIM-ME interface (AT+CSIM=1) the SIM will be accessible only by AT+CSIM commands (#QSS: 0). The GSM and GPRS services will be automatically deregistered to avoid the TE commands alter the GSM application. They will be automatically reconditioned after the unlocking of the SIM-ME interface. After the unlocking of the SIM-ME interface if PIN is required it will be necessary to enter it another time. The locking/unlocking of the SIM/ME interface causes reset of the SIM/UICC and then the closure of all previously opened logical channels and respective applications session termination (see +CCHO).

3.5.4.4.32. Set Voice Mail Number - +CSVM

+CSVM – Set Voice Mail Number	SELINT 2
AT+CSVM=<mode>[,<number>[,<type>]]	The number to the voice mail server is set with this command. The parameters **<number>** and **<type>** can be left out if the parameter **<mode>** is set to 0. Parameters: **<mode>** 0 – disable the voice mail number 1 – enable the voice mail number (factory default) **<number>** - string type phone number of format specified by **<type>** **<type>** - type of address octet in integer format 129 - unknown type of number and ISDN/Telephony numbering plan 145 - international type of number and ISDN/Telephony numbering plan (contains the character "+") Note: Set command only checks for parameters values validity; it does not any actual write to SIM to update voice mail number.
AT+CSVM?	Read command returns the currently selected voice mail number and the status (i.e. enabled/disabled) in the format

+CSVM – Set Voice Mail Number		SELINT 2
	+CSVM:<mode>,<number>,<type>	
AT+CSVM=?	Test command reports the range for the parameters **<mode>** and **<type>**.	

3.5.4.4.33. Open Logical Channel - +CCHO

+CCHO – Open Logical Channel		SELINT 2
AT+CCHO=<dfname>	Execution of the command causes the MT to return <**sessionid**> to allow the TE to identify a channel that is being allocated by the currently selected UICC, which is attached to ME. The currently selected UICC will open a new logical channel; select the application identified by the <**dfname**> received with this command and return a session Id as the response. The ME shall restrict the communication between the TE and the UICC to this logical channel. This <**sessionid**> is to be used when sending commands with Restricted UICC Logical Channel access +CRLA or Generic UICC Logical Channel access +CGLA commands. Parameter: **<dfname>** : all selectable applications in the UICC are referenced by a DF name coded on 1 to 16 bytes The response of the command is in the format: **+CCHO:** < **sessionid** > where: <**sessionid**> integer type; a session Id to be used in order to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism See 3GPP TS 31.101 for more information about defined values. Error case: *+CME ERROR: <err>* possible <err> values (numeric format followed by verbose format): 3 operation not allowed (*operation mode is not allowed by the ME*) 4 operation not supported (*wrong format or parameters of the command*) 13 SIM failure (*SIM response SW1 SW2 status byte Error*) 15 SIM wrong (*SIM response SW1 SW2 status byte Error*) 100 unknown (*generic error*) Note: The logical channel number is contained in the CLASS byte of an APDU command, thus implicitly contained in all APDU commands sent to a UICC. In this case it will be up to the MT to manage the logical channel part of the APDU CLASS byte and to ensure that the chosen	

	logical channel is relevant to the <sessionid> indicated in the AT command. See 3GPP TS 31.101 for further information on logical channels in APDU commands protocol.
AT+CCHO=?	Test command returns the **OK** result code.

3.5.4.4.34. Close Logical Channel - +CCHC

+CCHC – Close Logical Channel	**SELINT 2**
AT+CCHC=<sessionid>	This command asks the ME to close a communication session with the active UICC. The ME shall close the previously opened logical channel. The TE will no longer be able to send commands on this logical channel. The UICC will close the logical channel when receiving this command. Parameter: **<sessionid>** : integer type; a session Id to be used in order to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism. Error case: *+CME ERROR: <err>* possible <err> values (numeric format followed by verbose format): 3 operation not allowed (*operation mode is not allowed by the ME*) 4 operation not supported (*wrong format or parameters of the command*) 13 SIM failure (*SIM response SW1 SW2 status byte Error*) 15 SIM wrong (*SIM response SW1 SW2 status byte Error*) 21 invalid index *(<**sessionid**> not correspond to an opened channel*) 100 unknown (*generic error*)
AT+CCHC=?	Test command returns the **OK** result code.

3.5.4.4.35. Generic UICC Logical Channel Access - +CGLA

+CGLA – Generic UICC Logical Channel Access	**SELINT 2**
AT+CGLA=<sessionid>,<length>,<command>	Set command transmits to the MT the <**command**> it then shall send as it is to the selected UICC. In the same manner the UICC <**response**> shall be sent back by the MT to the TA as it is. This command allows a direct control of the currently selected UICC by a distant application on the TE. The TE shall then take care of processing UICC information within the frame specified by GSM/UMTS. Parameter: **<sessionid>** : integer type; this is the identifier of the session to be used in order to send the APDU commands to the UICC. It is mandatory in order to send commands to the UICC when targeting applications on the smart card using a logical channel other than the default channel (channel "0") **<length>** : integer type; length of the characters that are sent to TE in <**command**> or <**response**> (two times the actual length of the command

	or response) **<command>** : command passed on by the MT to the UICC in the format as described in 3GPP TS 31.101 (hexadecimal character format; refer +CSCS) The response of the command is in the format: **+CGLA: <length>,<response>** where: <**response**> : response to the command passed on by the SIM to the ME in the format as described in GSM TS 11.11 or 3G TS 31.101 (hexadecimal character format). See 3GPP TS 31.101 for more information about defined values. Error case: *+CME ERROR: <err>* possible <err> values (numeric format followed by verbose format): 3 operation not allowed (*operation mode is not allowed by the ME*) 4 operation not supported (*wrong format or parameters of the command*) 13 SIM failure (*SIM response SW1 SW2 status byte Error*) 15 SIM wrong (*SIM response SW1 SW2 status byte Error*) 21 invalid index *(<**sessionid**> not correspond to an opened channel*) 100 unknown (*generic error*) Note: When the SW1 SW2 bytes received from UICC in response to <**command**> are "61 XX", MT automatically send to UICC a GET RESPONSE command with length "XX" and the +CGLA **<response>** is that retuned by GET RESPONSE command.
AT+CGLA=?	Test command returns the **OK** result code.

3.5.4.5. Mobile Equipment Errors

3.5.4.5.1. Report Mobile Equipment Error - +CMEE

+CMEE - Report Mobile Equipment Error	**SELINT 0 / 1**
AT+CMEE[=[<n>]]	Set command enables/disables the report of result code: **+CME ERROR: <err>** as an indication of an error relating to the **+Cxxx** commands issued. When enabled, device related errors cause the **+CME ERROR: <err>** final result code instead of the default **ERROR** final result code. **ERROR** is anyway returned normally when the error message is related to syntax, invalid parameters, or **DTE** functionality.

+CMEE - Report Mobile Equipment Error	SELINT 0 / 1
	Parameter: <**n**> - enable flag 0 - disable **+CME ERROR:**<**err**> reports, use only **ERROR** report. 1 - enable **+CME ERROR:**<**err**> reports, with <**err**> in numeric format 2 - enable **+CME ERROR:** <**err**> reports, with <**err**> in verbose format Note: issuing **AT+CMEE**<**CR**> is the same as issuing the Read command. Note: issuing **AT+CMEE=**<**CR**> is the same as issuing the command **AT+CMEE=0**<**CR**>.
AT+CMEE?	Read command returns the current value of subparameter <**n**> **+CMEE: <n>**
AT+CMEE=?	Test command returns the range of values for subparameter <**n**> in the format: **+CMEE: 0, 1, 2** Note: the representation format of the Test command output is not included in parenthesis.
Note	**+CMEE** has no effect on the final result code **+CMS**
Reference	3GPP TS 27.007

+CMEE - Report Mobile Equipment Error	SELINT 2
AT+CMEE=[<n>]	Set command enables/disables the report of result code: **+CME ERROR: <err>** as an indication of an error relating to the +**Cxxx** commands issued. When enabled, device related errors cause the **+CME ERROR: <err>** final result code instead of the default **ERROR** final result code. **ERROR** is anyway returned normally when the error message is related to syntax, invalid parameters, or **DTE** functionality. Parameter: <**n**> - enable flag 0 - disable **+CME ERROR:**<**err**> reports, use only **ERROR** report. 1 - enable **+CME ERROR:**<**err**> reports, with <**err**> in numeric format 2 - enable **+CME ERROR:** <**err**> reports, with <**err**> in verbose format
AT+CMEE?	Read command returns the current value of subparameter <**n**>: **+CMEE: <n>**
AT+CMEE=?	Test command returns the range of values for subparameter <**n**>
Note	**+CMEE** has no effect on the final result code **+CMS**

+CMEE - Report Mobile Equipment Error		SELINT 2
Reference	3GPP TS 27.007	

3.5.4.5.2. Set CMEE mode - #CMEEMODE

#CMEEMODE – Set CMEE mode		SELINT 2
AT#CMEEMODE=<mode>	This command allows to extend the set of error codes reported by CMEE to the GPRS related error codes. Parameters: **<mode>:** 0 – disable support of GPRS related error codes by AT+CMEE (default) 1 – enable support of GPRS related error codes by AT+CMEE This parameter is stored in the user profile	
AT#CMEEMODE?	Read command reports the currently selected < **mode** > in the format: **#CMEEMODE: <mode>**	
AT#CMEEMODE =?	Test command reports the supported range of values for parameter < **mode** >	

3.5.4.6. Voice Control

3.5.4.6.1. DTMF Tones Transmission - +VTS

+VTS - DTMF Tones Transmission		SELINT 0 / 1
AT+VTS=<dtmfstring>[,duration]	Execution command allows the transmission of DTMF tones. Parameters: **<dtmfstring>** - string of **<dtmf>s,** i.e. ASCII characters in the set **(0-9), #,*,(A-D)**; it allows the user to send a sequence of DTMF tones, each of them with a duration that was defined through **+VTD** command. **<duration>** - duration of a tone in 1/100 sec.; this parameter can be specified only if the length of first parameter is just one ASCII character 0 - a single DTMF tone will be transmitted for a duration depending on the network, no matter what the current **+VTD** setting is. 1..255 - a single DTMF tone will be transmitted for a time **<duration>** (in 10 ms multiples), no matter what the current **+VTD** setting is. Note: this commands operates in voice mode only (see **+FCLASS**). Note: the character P does not correspond to any DTMF tone, but it is interpreted as a pause of 3 seconds between the preceding and succeeding DTMF string elements	
AT+VTS=?	For compatibility with previous versions, Test command returns **+VTS: (),(),()**	

+VTS - DTMF Tones Transmission	SELINT 0 / 1
	An enhanced version of Test command has been defined: **AT+VTS=??**, that provides the correct range of values for **<DTMF>**.
AT+VTS=??	Test command provides the list of supported **<dtmf>s** and the list of supported **<duration>s** in the format: **(list of supported <dtmf>s)[,(list of supported <duration>s)]**
Reference	3GPP TS 27.007 and TIA IS-101

+VTS - DTMF Tones Transmission	SELINT 2
AT+VTS= <dtmfstring> [,duration]	Execution command allows the transmission of DTMF tones. Parameters: **<dtmfstring>** - string of **<dtmf>s,** i.e. ASCII characters in the set **(0-9), #,*,(A-D),P**; it allows the user to send a sequence of DTMF tones, each of them with a duration that was defined through **+VTD** command. **<duration>** - duration of a tone in 1/100 sec.; this parameter can be specified only if the length of first parameter is just one ASCII character 0 - a single DTMF tone will be transmitted for a duration depending on the network, no matter what the current **+VTD** setting is. 1..255 - a single DTMF tone will be transmitted for a time **<duration>** (in 10 ms multiples), no matter what the current **+VTD** setting is. Note: this commands operates in voice mode only (see **+FCLASS**). Note: the character P does not correspond to any DTMF tone, but it is interpreted as a pause of 3 seconds between the preceding and succeeding DTMF string elements
AT+VTS=?	Test command provides the list of supported **<dtmf>s** and the list of supported **<duration>s** in the format: **(list of supported <dtmf>s)[,(list of supported <duration>s)]**
Reference	3GPP TS 27.007 and TIA IS-101

3.5.4.6.2. Tone Duration - +VTD

+VTD - Tone Duration	SELINT 0 / 1
AT+VTD[= <duration>]	Set command sets the length of tones transmitted with **+VTS** command. Parameter: **<duration>** - duration of a tone 0 - the duration of every single tone is dependent on the network (factory default) 1..255 - duration of every single tone in 1/10 sec. Note: If parameter is omitted the behavior of Set command is the same as Read command.

+VTD - Tone Duration		SELINT 0 / 1
AT+VTD?	Read command reports the current Tone Duration, in the format: **<duration>**	
AT+VTD=?	Test command provides the list of supported **<duration>s** in the format: **(list of supported <duration>s)**	
Reference	3GPP TS 27.007 and TIA IS-101	

+VTD - Tone Duration		SELINT 2
AT+VTD= **<duration>**	Set command sets the length of tones transmitted with **+VTS** command. Parameter: **<duration>** - duration of a tone 0 - the duration of every single tone is dependent on the network (factory default) 1..255 - duration of every single tone in 1/10 sec.	
AT+VTD?	Read command reports the current Tone Duration, in the format: **<duration>**	
AT+VTD=?	Test command provides the list of supported **<duration>s** in the format: **(list of supported <duration>s)**	
Reference	3GPP TS 27.007 and TIA IS-101	

3.5.4.7. Commands For GPRS

3.5.4.7.1. GPRS Mobile Station Class - +CGCLASS

+CGCLASS - GPRS Mobile Station Class	SELINT 0 / 1
AT+CGCLASS [=<class>]	Set command sets the GPRS class according to **<class>** parameter. Parameter: **<class>** - GPRS class "B" - GSM/GPRS (factory default) "CG" - class C in GPRS only mode (GPRS only) "CC" - class C in circuit switched only mode (GSM only) Note: the setting is saved in NVM (and available on following reboot). Note: if parameter **<class>** is omitted, then the behaviour of Set command is the same as Read command.
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format: **+CGLASS: <class>**
AT+CGCLASS=?	Test command reports the range for the parameter **<class>**

+CGCLASS - GPRS mobile station class	SELINT 2
AT+CGCLASS= [<class>]	Set command sets the GPRS class according to **<class>** parameter. Parameter: **<class>** - GPRS class "B" - GSM/GPRS (factory default) "CG" - class C in GPRS only mode (GPRS only) "CC" - class C in circuit switched only mode (GSM only) Note: the setting is saved in NVM (and available on following reboot).
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format: **+CGLASS: <class>**
AT+CGCLASS=?	Test command reports the range for the parameter **<class>**

3.5.4.7.2. GPRS Attach Or Detach - +CGATT

+CGATT - GPRS Attach Or Detach	SELINT 0 / 1
AT+CGATT[= <state>]	Execution command is used to attach the terminal to, or detach the terminal from, the GPRS service depending on the parameter **<state>**. Parameter: **<state>** - state of GPRS attachment 0 - detached

+CGATT - GPRS Attach Or Detach	SELINT 0 / 1
	1 - attached Note: If the parameter is omitted the behavior of Execution command is the same as Read command.
AT+CGATT?	Read command returns the current GPRS service state.
AT+CGATT=?	Test command requests information on the supported GPRS service states.
Example	AT+CGATT? +CGATT: 0 OK AT+CGATT=? +CGATT: (0,1) OK AT+CGATT=1 OK
Reference	3GPP TS 27.007
	SELINT 2
AT+CGATT=[<state>]	Execution command is used to attach the terminal to, or detach the terminal from, the GPRS service depending on the parameter **<state>**. Parameter: **<state>** - state of GPRS attachment 0 - detached 1 - attached
AT+CGATT?	Read command returns the current GPRS service state.
AT+CGATT=?	Test command requests information on the supported GPRS service states.
Example	AT+CGATT? +CGATT: 0 OK AT+CGATT=? +CGATT: (0,1) OK AT+CGATT=1 OK
Reference	3GPP TS 27.007

3.5.4.7.3. GPRS Event Reporting - +CGEREP

+CGEREP - GPRS Event Reporting	SELINT 2
AT+CGEREP= [<mode>[,<bfr>]]	Set command enables or disables sending of unsolicited result codes **+CGEV: XXX** (see below) from **TA** to **TE** in the case of certain events occurring in the **TA** or the network. Parameters: **<mode>** - controls the processing of **URCs** specified with this command 0 - Buffer unsolicited result codes in the **TA**. If **TA** result code buffer is full, the

+CGEREP - GPRS Event Reporting	SELINT 2
	oldest one can be discarded. No codes are forwarded to the **TE**. 1 - Discard unsolicited result codes when **TA-TE** link is reserved (e.g. in on-line data mode); otherwise forward them directly to the **TE**. 2 - Buffer unsolicited result codes in the **TA** when **TA-TE** link is reserved (e.g. in on-line data mode) and flush them to the **TE** when **TA-TE** link becomes available; otherwise forward them directly to the **TE**. **<bfr>** - controls the effect on buffered codes when **<mode> 1** or **2** is entered: 0 - **TA** buffer of unsolicited result codes defined within this command is cleared when **<mode>=1** or **2** is entered. 1 - **TA** buffer of unsolicited result codes defined within this command is flushed to the **TE** when **<mode>=1** or **2** is entered (**OK** response shall be given before flushing the codes) **Unsolicited Result Codes** The following unsolicited result codes and the corresponding events are defined: **+CGEV: REJECT <PDP_type>, <PDP_addr>** A network request for PDP context activation occurred when the **TA** was unable to report it to the **TE** with a +**CRING** unsolicited result code and was automatically rejected **+CGEV: NW REACT <PDP_type>, <PDP_addr>, [<cid>]** The network has requested a context reactivation. The <cid> that was used to reactivate the context is provided if known to **TA** **+CGEV: NW DEACT <PDP_type>, <PDP_addr>, [<cid>]** The network has forced a context deactivation. The <cid> that was used to activate the context is provided if known to **TA** **+CGEV: ME DEACT <PDP_type>, <PDP_addr>, [<cid>]** The mobile equipment has forced a context deactivation. The <cid> that was used to activate the context is provided if known to **TA** **+CGEV: NW DETACH** The network has forced a GPRS detach. This implies that all active contexts have been deactivated. These are not reported separately **+CGEV: ME DETACH** The mobile equipment has forced a GPRS detach. This implies that all active contexts have been deactivated. These are not reported separately **+CGEV: ME CLASS <class>** The mobile equipment has forced a change of MS class. The highest available class is reported (see **+CGCLASS**)
AT+CGEREP?	Read command returns the current <mode> and <bfr> settings, in the format:

+CGEREP - GPRS Event Reporting		SELINT 2
	+CGEREP: <mode>,<bfr>	
AT+CGEREP=?	Test command reports the supported range of values for the **+CGEREP** command parameters.	
Reference	3GPP TS 27.007	

3.5.4.7.4. GPRS Network Registration Status - +CGREG

+CGREG - GPRS Network Registration Status		SELINT 0 / 1
AT+CGREG[= [<n>]]	Set command controls the presentation of an unsolicited result code **+CGREG**: (see format below). Parameter: **<n>** - result code presentation mode 0 - disable network registration unsolicited result code 1 - enable network registration unsolicited result code; if there is a change in the terminal GPRS network registration status, it is issued the unsolicited result code: **+CGREG: <stat>** where: **<stat>** - registration status 0 - not registered, terminal is not currently searching a new operator to register to 1 - registered, home network 2 - not registered, but terminal is currently searching a new operator to register to 3 - registration denied 4 - unknown 5 - registered, roaming 2 - enable network registration and location information unsolicited result code; if there is a change of the network cell, it is issued the unsolicited result code: **+CGREG: <stat>[,<lac>,<ci>]** where: **<stat>** - registration status (see above for values) **<lac>** - location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) **<ci>** - cell ID in hexadecimal format Note: **<lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell. Note: issuing **AT+CGREG<CR>** is the same as issuing the Read command.	

+CGREG - GPRS Network Registration Status	SELINT 0 / 1
	Note: issuing **AT+CGREG=<CR>** is the same as issuing the command **AT+CGREG=0<CR>**.
AT+CGREG?	Read command returns the status of result code presentation mode **<n>** and the integer **<stat>** which shows whether the network has currently indicated the registration of the terminal in the format: **+CGREG:<n>,<stat>[,<lac>,<ci>]** Note: **<lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.
AT+CGREG=?	Test command returns supported values for parameter **<n>**
Reference	3GPP TS 27.007

+CGREG - GPRS Network Registration Status	SELINT 2
AT+CGREG=[<n>]	Set command controls the presentation of an unsolicited result code **+CGREG: (see format below)**. Parameter: **<n>** - result code presentation mode 0 - disable network registration unsolicited result code 1 - enable network registration unsolicited result code; if there is a change in the terminal GPRS network registration status, it is issued the unsolicited result code: **+CGREG: <stat>** where: **<stat>** - registration status 0 - not registered, terminal is not currently searching a new operator to register to 1 - registered, home network 2 - not registered, but terminal is currently searching a new operator to register to 3 - registration denied 4 - unknown 5 - registered, roaming 2 - enable network registration and location information unsolicited result code; if there is a change of the network cell, it is issued the unsolicited result code: **+CGREG: <stat>[,<lac>,<ci>]** where: **<stat>** - registration status (see above for values) **<lac>** - location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) **<ci>** - cell ID in hexadecimal format.

+CGREG - GPRS Network Registration Status	SELINT 2
	Note: **<lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.
AT+CGREG?	Read command returns the status of result code presentation mode **<n>** and the integer **<stat>** which shows whether the network has currently indicated the registration of the terminal in the format: **+CGREG: <n>,<stat>[,<lac>,<ci>]** Note: **<lac>** and **<Ci>** are reported only if **<mode>=2** and the mobile is registered on some network cell.
AT+CGREG=?	Test command returns supported values for parameter **<n>**
Reference	3GPP TS 27.007

3.5.4.7.5. Define PDP Context - +CGDCONT

+CGDCONT - Define PDP Context	SELINT 0 / 1
AT+CGDCONT[= **[<cid>** **[,<PDP_type>** **[,<APN>** **[,<PDP_addr>** **[,<d_comp>** **[,<h_comp>** **[,<pd1>** **[,…[,pdN]]]]]]]]]**	Set command specifies PDP context parameter values for a PDP context identified by the (local) context identification parameter, **<cid>** Parameters: **<cid>** - (PDP Context Identifier) numeric parameter which specifies a particular PDP context definition. 1..*max* - where the value of *max* is returned by the Test command **<PDP_type>** - (Packet Data Protocol type) a string parameter which specifies the type of packet data protocol "IP" - Internet Protocol **<APN>** - (Access Point Name) a string parameter which is a logical name that is used to select the GGSN or the external packet data network. If the value is empty (**“”**) or omitted, then the subscription value will be requested. **<PDP_addr>** - a string parameter that identifies the terminal in the address space applicable to the PDP. The allocated address may be read using the **+CGPADDR** command. **<d_comp>** - numeric parameter that controls PDP data compression 0 - off (default if value is omitted) 1 - on **<h_comp>** - numeric parameter that controls PDP header compression 0 - off (default if value is omitted) 1 - on **<pd1>**, …, **<pdN>** - zero to N string parameters whose meanings are specific to the **<PDP_type>** Note: a special form of the Set command, **+CGDCONT=<cid>**, causes the values for context number **<cid>** to become undefined. Note: issuing **AT+CGDCONT<CR>** is the same as issuing the Read command.

+CGDCONT - Define PDP Context	SELINT 0 / 1
	Note: issuing **AT+CGDCONT=<CR>** returns the **OK** result code.
AT+CGDCONT?	Read command returns the current settings for each defined context in the format: **+CGDCONT: <cid>,<PDP_type>,<APN>,<PDP_addr>,<d_comp>, <h_comp>[,<pd1>[,…[,pdN]]]<CR><LF>[<CR><LF>+CGDCONT: <cid>,<PDP_type>,<APN>,<PDP_addr>,<d_comp>,<h_comp> [,<pd1>[,…[,pdN]]]<CR><LF>[…]]**
AT+CGDCONT=?	Test command returns values supported as a compound value
Example	AT+CGDCONT=1,"IP",*"APN"*,"10.10.10.10",0,0 OK AT+CGDCONT? +CGDCONT: 1,"IP","*APN*","10.10.10.10",0,0 OK AT+CGDCONT=? +CGDCONT: (1-5),"IP",,,(0-1),(0-1) OK
Reference	3GPP TS 27.007

+CGDCONT – Define PDP Context	SELINT 2
AT+CGDCONT= **[<cid>** **[,<PDP_type>** **[,<APN>** **[,<PDP_addr>** **[,<d_comp>** **[,<h_comp>** **[,<pd1>** **[,…[,pdN]]]]]]]]**	Set command specifies PDP context parameter values for a PDP context identified by the (local) context identification parameter, **<cid>** Parameters: **<cid>** - (PDP Context Identifier) numeric parameter which specifies a particular PDP context definition. 1..*max* - where the value of *max* is returned by the Test command **<PDP_type>** - (Packet Data Protocol type) a string parameter which specifies the type of packet data protocol "IP" - Internet Protocol "IPV6" - Internet Protocol version 6 **<APN>** - (Access Point Name) a string parameter which is a logical name that is used to select the GGSN or the external packet data network. If the value is empty (**""**) or omitted, then the subscription value will be requested. **<PDP_addr>** - a string parameter that identifies the terminal in the address space applicable to the PDP. The allocated address may be read using the **+CGPADDR** command. **<d_comp>** - numeric parameter that controls PDP data compression 0 - off (default if value is omitted) 1 - on **<h_comp>** - numeric parameter that controls PDP header compression 0 - off (default if value is omitted) 1 - on **<pd1>**, …, **<pdN>** - zero to N string parameters whose meanings are specific to the **<PDP_type>**

	Note: a special form of the Set command, **+CGDCONT=<cid>**, causes the values for context number **<cid>** to become undefined.
AT+CGDCONT?	Read command returns the current settings for each defined context in the format: **+CGDCONT: <cid>,<PDP_type>,<APN>,<PDP_addr>,<d_comp>, <h_comp>[,<pd1>[,…[,pdN]]][<CR><LF>+CGDCONT: <cid>, <PDP_type>,<APN>,<PDP_addr>,<d_comp>,<h_comp> [,<pd1>[,…[,pdN]]][…]]**
AT+CGDCONT=?	Test command returns values supported as a compound value

3.5.4.7.6. Quality Of Service Profile - +CGQMIN

+CGQMIN - Quality Of Service Profile (Minimum Acceptable)	**SELINT 0 / 1**
AT+CGQMIN[= [<cid> [,<precedence> [,<delay> [,<reliability> [,<peak> [,<mean>]]]]]]]	Set command allows to specify a minimum acceptable profile which is checked by the terminal against the negotiated profile returned in the Activate PDP Context Accept message. Parameters: **<cid>** - PDP context identification (see **+CGDCONT**). **<precedence>** - precedence class **<delay>** - delay class **<reliability>** - reliability class **<peak>** - peak throughput class **<mean>** - mean throughput class If a value is omitted for a particular class then this class is not checked. Note: a special form of the Set command, **+CGQMIN=<cid>** causes the requested profile for context number **<cid>** to become undefined. Note: issuing **AT+CGQMIN<CR>** is the same as issuing the Read command. Note: issuing **AT+CGQMIN=<CR>** returns the **OK** result code.
AT+CGQMIN?	Read command returns the current settings for each defined context in the format: **+CGQMIN: <cid>,<precedence>,<delay>,<reliability>,<peak>, <mean><CR><LF>[<CR><LF>+CGQMIN: <cid>,<precedence>, <delay>,<reliability>,<peak>,<mean><CR><LF>[…]]** If no PDP context has been defined, it has no effect and **OK** result code is returned.
AT+CGQMIN=?	Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format: **+CGQMIN: <PDP_Type>,(list of supported <precedence>s), (list of supported <delay>s),(list of supported <reliability>s), (list of supported <peak>s),(list of supported <mean>s)**

+CGQMIN - Quality Of Service Profile (Minimum Acceptable)	SELINT 0 / 1
	Note: only the "IP" PDP_Type is currently supported.
Example	AT+CGQMIN=1,0,0,3,0,0 OK AT+CGQMIN? +CGQMIN: 1,0,0,5,0,0 OK AT+CGQMIN=? +CGQMIN: "IP",(0-3),(0-4),(0-5),(0-9),(0-19,31) OK
Reference	3GPP TS 27.007; GSM 03.60

+CGQMIN - Quality Of Service Profile (Minimum Acceptable)	SELINT 2
AT+CGQMIN= [<cid> [,<precedence> [,<delay> [,<reliability> [,<peak> [,<mean>]]]]]]	Set command allows to specify a minimum acceptable profile which is checked by the terminal against the negotiated profile returned in the Activate PDP Context Accept message. Parameters: **<cid>** - PDP context identification (see **+CGDCONT** command). **<precedence>** - precedence class **<delay>** - delay class **<reliability>** - reliability class **<peak>** - peak throughput class **<mean>** - mean throughput class If a value is omitted for a particular class then this class is not checked. Note: a special form of the Set command, **+CGQMIN=<cid>** causes the requested profile for context number **<cid>** to become undefined.
AT+CGQMIN?	Read command returns the current settings for each defined context in the format: **+CGQMIN: <cid>,<precedence>,<delay>,<reliability>,<peak>, <mean>[<CR><LF>+CGQMIN: <cid>,<precedence>, <delay>,<reliability>,<peak>,<mean>[…]]** If no PDP context has been defined, it has no effect and **OK** result code is returned.
AT+CGQMIN=?	Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format: **+CGQMIN: <PDP_Type>,(list of supported <precedence>s), (list of supported <delay>s),(list of supported <reliability>s), (list of supported <peak>s),(list of supported <mean>s)** Note: only the "IP" PDP_Type is currently supported.
Example	AT+CGQMIN=1,0,0,3,0,0 OK AT+CGQMIN?

+CGQMIN - Quality Of Service Profile (Minimum Acceptable)	SELINT 2
	+CGQMIN: 1,0,0,5,0,0 OK AT+CGQMIN=? +CGQMIN: "IP",(0-3),(0-4),(0-5),(0-9),(0-18,31) OK
Reference	3GPP TS 27.007; GSM 03.60

3.5.4.7.7. Quality Of Service Profile - +CGQREQ

+CGQREQ - Quality Of Service Profile (Requested)	SELINT 0 / 1
AT+CGQREQ[= **[<cid>** **[,<precedence>** **[,<delay>** **[,<reliability>** **[,<peak>** **[,<mean>]]]]]]**	Set command allows to specify a Quality of Service Profile that is used when the terminal sends an Activate PDP Context Request message to the network. It specifies a profile for the context identified by the (local) context identification parameter, **<cid>**. Parameters: **<cid>** - PDP context identification (see **+CGDCONT** command). **<precedence>** - precedence class **<delay>** - delay class **<reliability>** - reliability class **<peak>** - peak throughput class **<mean>** - mean throughput class If a value is omitted for a particular class then this class is not checked. Note: a special form of the Set command, **+CGQREQ=<cid>** causes the requested profile for context number **<cid>** to become undefined. Note: issuing **AT+CGQREQ<CR>** is the same as issuing the Read command. Note: issuing **AT+CGQREQ=<CR>** returns the **OK** result code.
AT+CGQREQ?	Read command returns the current settings for each defined context in the format: **+CGQREQ: <cid>,<precedence>,<delay>,<reliability>,<peak>,** **<mean><CR><LF>[<CR><LF>+CGQREQ: <cid>,<precedence>,** **<delay>,<reliability>,<peak>,<mean><CR><LF>[…]]** If no PDP context has been defined, it has no effect and **OK** result code is returned.
AT+CGQREQ=?	Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format: **+CGQREQ: <PDP_Type>,(list of supported <precedence>s),** **(list of supported <delay>s),(list of supported <reliability>s),** **(list of supported <peak>s),(list of supported <mean>s)**

+CGQREQ - Quality Of Service Profile (Requested)	SELINT 0 / 1
	Note: only the "IP" PDP_Type is currently supported.
Example	AT+CGQREQ? +CGQREQ: 1,0,0,3,0,0 OK AT+CGQREQ=1,0,0,3,0,0 OK AT+CGQREQ=? +CGQREQ: "IP",(0-3),(0-4),(0-5),(0-9),(0-19,31) OK
Reference	3GPP TS 27.007; GSM 03.60

+CGQREQ - Quality Of Service Profile (Requested)	SELINT 2
AT+CGQREQ= [<cid> [,<precedence> [,<delay> [,<reliability> [,<peak> [,<mean>]]]]]]	Set command allows to specify a Quality of Service Profile that is used when the terminal sends an Activate PDP Context Request message to the network. It specifies a profile for the context identified by the (local) context identification parameter, **<cid>**. Parameters: **<cid>** - PDP context identification (see **+CGDCONT** command). **<precedence>** - precedence class **<delay>** - delay class **<reliability>** - reliability class **<peak>** - peak throughput class **<mean>** - mean throughput class If a value is omitted for a particular class then this class is not checked. Note: a special form of the Set command, **+CGQREQ=<cid>** causes the requested profile for context number **<cid>** to become undefined.
AT+CGQREQ?	Read command returns the current settings for each defined context in the format: **+CGQREQ: <cid>,<precedence>,<delay>,<reliability>,<peak>, <mean>[<CR><LF>+CGQREQ: <cid>,<precedence>, <delay>,<reliability>,<peak>,<mean>[…]]** If no PDP context has been defined, it has no effect and **OK** result code is returned.
AT+CGQREQ=?	Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format: **+CGQREQ: <PDP_Type>,(list of supported <precedence>s), (list of supported <delay>s),(list of supported <reliability>s), (list of supported <peak>s),(list of supported <mean>s)** Note: only the "IP" PDP_Type is currently supported.
Example	AT+CGQREQ? +CGQREQ: 1,0,0,3,0,0

+CGQREQ - Quality Of Service Profile (Requested)	SELINT 2
	OK AT+CGQREQ=1,0,0,3,0,0 OK AT+CGQREQ=? +CGQREQ: ”IP”,(0-3),(0-4),(0-5),(0-9),(0-18,31) OK
Reference	3GPP TS 27.007; GSM 03.60

3.5.4.7.8. PDP Context - +CGACT

+CGACT - PDP Context Activate Or Deactivate	SELINT 0 / 1
AT+CGACT[= [<state>[,<cid> [,<cid>[,…]]]]]	Execution command is used to activate or deactivate the specified PDP context(s) Parameters: **<state>** - indicates the state of PDP context activation 0 - deactivated 1 - activated **<cid>** - a numeric parameter which specifies a particular PDP context definition (see **+CGDCONT**) Note: if no **<cid>**s are specified the activation/deactivation form of the command activates/deactivates all defined contexts. Note: issuing **AT+CGACT<CR>** is the same as issuing the Read command. Note: issuing **AT+CGACT=<CR>** returns the **OK** result code.
AT+CGACT?	Read command returns the current activation state for all the defined PDP contexts in the format: **+CGACT: <cid>,<state><CR><LF>[<CR><LF>+CGACT: <cid>,<state><CR><LF>[…]]**
AT+CGACT=?	Test command reports information on the supported PDP context activation states parameters in the format: **+CGACT: (0-1)**
Example	AT+CGACT? +CGACT: 1,1 OK AT+CGACT=1,1 OK
Reference	3GPP TS 27.007

+CGACT - PDP Context Activate Or Deactivate	SELINT 2
AT+CGACT= [<state>[,<cid> [,<cid>[,…]]]]	Execution command is used to activate or deactivate the specified PDP context(s) Parameters:

+CGACT - PDP Context Activate Or Deactivate	SELINT 2
	<state> - indicates the state of PDP context activation 0 - deactivated 1 - activated **<cid>** - a numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command) Note: if no **<cid>**s are specified the activation/deactivation form of the command activates/deactivates all defined contexts.
AT+CGACT?	Read command returns the current activation state for all the defined PDP contexts in the format: **+CGACT: <cid>,<state>[<CR><LF>+CGACT: <cid>,<state>[…]]**
AT+CGACT=?	Test command reports information on the supported PDP context activation states parameters in the format: **+CGACT: (0,1)**
Example	AT+CGACT=1,1 OK AT+CGACT? +CGACT: 1,1 OK
Reference	3GPP TS 27.007

3.5.4.7.9. Show PDP Address - +CGPADDR

+CGPADDR - Show PDP Address	SELINT 0 / 1
AT+CGPADDR=[<cid>[,<cid>[,…]]]	Execution command returns a list of PDP addresses for the specified context identifiers in the format: **+CGPADDR: <cid>[,<PDP_addr>]<CR><LF>~~[<CR><LF>~~** **+CGPADDR: <cid>[,<PDP_addr>]<CR><LF>[…]]** Parameters: **<cid>** - a numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). If no **<cid>** is specified, the addresses for all defined contexts are returned. **<PDP_addr>** - a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the **+CGDCONT** command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by **<cid>**; if no address is available the **<PDP_addr>** parameter is not shown
AT+CGPADDR=?	Test command returns a list of defined **<cid>**s.
Example	AT#GPRS=1 +IP: xxx.yyy.zzz.www

+CGPADDR - Show PDP Address	SELINT 0 / 1
	OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www" OK AT+CGPADDR=? +CGPADDR: (1) OK
Reference	3GPP TS 27.007

+CGPADDR - Show PDP Address	SELINT 2
AT+CGPADDR=[<cid>[,<cid>[,…]]]	Execution command returns a list of PDP addresses for the specified context identifiers in the format: **+CGPADDR: <cid>,<PDP_addr>[<CR><LF>+CGPADDR: <cid>, <PDP_addr>[…]]** Parameters: **<cid>** - a numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). If no **<cid>** is specified, the addresses for all defined contexts are returned. **<PDP_addr>** - a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the **+CGDCONT** command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by **<cid>**; if no address is available the empty string ("") is represented as **<PDP_addr>**
AT+CGPADDR=?	Test command returns a list of defined **<cid>**s.
Example	AT#GPRS=1 +IP: xxx.yyy.zzz.www OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www" OK AT+CGPADDR=? +CGPADDR: (1) OK
Reference	3GPP TS 27.007

3.5.4.7.10. Enter Data State - +CGDATA

+CGDATA - Enter Data State	SELINT 0 / 1
AT+CGDATA=	Execution command causes to perform whatever actions are necessary to establish a

+CGDATA - Enter Data State	SELINT 0 / 1
[<L2P>,[<cid>[,<cid>[,…]]]]	communication with the network using one or more GPRS PDP types. Parameters: **<L2P>** - string parameter that indicates the layer 2 protocol to be used "PPP" - PPP Point-to-point protocol **<cid>** - numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). Note: if parameter **<L2P>** is omitted, the layer 2 protocol is unspecified
AT+CGDATA=?	Test command reports information on the supported layer 2 protocols. Note: the representation format of the Test command output is not included in parenthesis
Example	AT+CGDATA=? +CGDATA: ”PPP” OK AT+CGDATA=”PPP”,1 CONNECT
Reference	3GPP TS 27.007

+CGDATA - Enter Data State	SELINT 2
AT+CGDATA=[<L2P>,[<cid>[,<cid>[,…]]]]	Execution command causes to perform whatever actions are necessary to establish a communication with the network using one or more GPRS PDP types. Parameters: **<L2P>** - string parameter that indicates the layer 2 protocol to be used "PPP" - PPP Point-to-point protocol **<cid>** - numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). Note: if parameter **<L2P>** is omitted, the layer 2 protocol is unspecified
AT+CGDATA=?	Test command reports information on the supported layer 2 protocols.
Example	AT+CGDATA=? +CGDATA: (”PPP”) OK AT+CGDATA=”PPP”,1 CONNECT
Reference	3GPP TS 27.007

3.5.4.7.11. Modify PDP context - +CGCMOD

+CGCMOD – Modify PDP context	SELINT 2
AT+CGCMOD=[<cid1>[,<cid2>[,…,<cidN>]]]	The execution command is used to modify the specified PDP context(s) with respect to QoS profiles. If no **<cid*i*>** is specified the command modifies all active contexts.

	Parameters: **<cid*i*>:** a numeric parameter which specifies a particular PDP context
AT+CGCMOD=?	Test command returns a list of **<cid>**s associated with active contexts.

3.5.4.8. Commands For Battery Charger

3.5.4.8.1. Battery Charge - +CBC

+CBC - Battery Charge	**SELINT 0 / 1**
AT+CBC	Execution command returns the current Battery Charge status in the format: **+CBC: <bcs>,<bcl>** where: **<bcs>** - battery charge status 0 - **ME** is powered by the battery 1 - **ME** has a battery connected, and charger pin is being powered 2 - **ME** does not have a battery connected 3 - Recognized power fault, calls inhibited **<bcl>** - battery charge level, only if <bcs>=0 0 - battery is exhausted, or ME does not have a battery connected 25 - battery charge remained is estimated to be 25% 50 - battery charge remained is estimated to be 50% 75 - battery charge remained is estimated to be 75% 100 - battery is fully charged. Note: **<bcs>=1** indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for **ME** operations is taken anyway from VBATT pins. Note: without battery/power connected on VBATT pins or during a power fault the unit is not working, therefore values **<bcs>=2** and **<bcs>=3** will never appear. Note: <bcl> indicates battery charge level only if battery is connected and charger is not connected
AT+CBC?	Read command has the same effect as Execution command.
AT+CBC=?	Test command returns parameter values supported as a compound value. For compatibility with previous versions, Test command returns **+CBC: (0-2),(0-100)** An enhanced version of Test command has been defined: **AT+CBC=??**, that provides the complete range of values for **<bcs>** and **<bcl>**. Note: although **+CBC** is an execution command, ETSI 07.07 requires the Test command to be defined.
AT+CBC=??	Enhanced test command returns the complete range of values for **<bcs>** and **<bcl>**: **+CBC: (0-3),(0-100)**
Example	AT+CBC +CBC: 0,75

+CBC - Battery Charge	SELINT 0 / 1
	OK
Note	The **ME** does not make differences between being powered by a battery or by a power supply on the VBATT pins, so it is not possible to distinguish between these two cases.
Reference	3GPP TS 27.007

+ CBC - Battery Charge	SELINT 2
AT+CBC	Execution command returns the current Battery Charge status in the format: **+CBC: <bcs>,<bcl>** where: **<bcs>** - battery status 0 - **ME** is powered by the battery 1 - **ME** has a battery connected, and charger pin is being powered 2 - **ME** does not have a battery connected 3 - Recognized power fault, calls inhibited **<bcl>** - battery charge level, only if <bcs>=0 0 - battery is exhausted, or **ME** does not have a battery connected 25 - battery charge remained is estimated to be 25% 50 - battery charge remained is estimated to be 50% 75 - battery charge remained is estimated to be 75% 100 - battery is fully charged. Note: **<bcs>**=1 indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for **ME** operations is taken anyway from **VBATT** pins. Note: without battery/power connected on **VBATT** pins or during a power fault the unit is not working, therefore values **<bcs>=2** and **<bcs>=3** will never appear. Note: <bcl> indicates battery charge level only if battery is connected and charger is not connected
AT+CBC=?	Test command returns parameter values supported as a compound value. **+CBC: (0-3),(0-100)** Note: although **+CBC** is an execution command, ETSI 07.07 requires the Test command to be defined.
Example	AT+CBC +CBC: 0,75 OK
Note	The **ME** does not make differences between being powered by a battery or by a power supply on the **VBATT** pins, so it is not possible to distinguish between these two cases.
Reference	3GPP TS 27.007

3.5.5. 3GPP TS 27.005 AT Commands for SMS and CBS

3.5.5.1. General Configuration

3.5.5.1.1. Select Message Service - +CSMS

+CSMS - Select Message Service	**SELINT 0 / 1**
AT+CSMS [=<service>]	Set command selects messaging service **<service>**. It returns the types of messages supported by the **ME**: Parameter: **<service>** 0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default) Set command returns current service setting along with the types of messages supported by the ME: **+CSMS: <service>,<mt>,<mo>,<bm>** where: **<mt>** - mobile terminated messages support 0 - type not supported 1 - type supported **<mo>** - mobile originated messages support 0 - type not supported 1 - type supported **<bm>** - broadcast type messages support 0 - type not supported 1 - type supported Note: If parameter is omitted then the behavior of Set command is the same as Read command.
AT+CSMS?	Read command reports current service setting along with supported message types in the format: **+CSMS: <service>,<mt>,<mo>,<bm>** where: **<service>** - messaging service (see above) **<mt>** - mobile terminated messages support (see above) **<mo>** - mobile originated messages support (see above) **<bm>** - broadcast type messages support (see above)
AT+CSMS=?	Test command reports a list of all services supported by the device. The supported value of the parameter **<service>**.
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041

+CSMS - Select Message Service	SELINT 2
AT+CSMS= <service>	Set command selects messaging service **<service>**. It returns the types of messages supported by the **ME**: Parameter: **<service>** 0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default) Set command returns the types of messages supported by the **ME**: **+CSMS: <mt>,<mo>,<bm>** where: **<mt>** - mobile terminated messages support 0 - type not supported 1 - type supported **<mo>** - mobile originated messages support 0 - type not supported 1 - type supported **<bm>** - broadcast type messages support 0 - type not supported 1 - type supported
AT+CSMS?	Read command reports current service setting along with supported message types in the format: **+CSMS: <service>,<mt>,<mo>,<bm>** where: **<service>** - messaging service (see above) **<mt>** - mobile terminated messages support (see above) **<mo>** - mobile originated messages support (see above) **<bm>** - broadcast type messages support (see above)
AT+CSMS=?	Test command reports the supported value of the parameter **<service>**.
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041

3.5.5.1.2. Preferred Message Storage - +CPMS

+CPMS - Preferred Message Storage	SELINT 0 / 1
AT+CPMS[= <memr> [,<memw> [,<mems>]]]	Set command selects memory storages **<memr>**, **<memw>** and **<mems>** to be used for reading, writing, sending and storing SMs. Parameters: **<memr>** - memory from which messages are read and deleted "SM" - SIM SMS memory storage "ME" - **ME** internal storage **<memw>** - memory to which writing and sending operations are made "SM" - SIM SMS memory storage

+CPMS - Preferred Message Storage	SELINT 0 / 1
	<mems> - memory to which received SMs are preferred to be stored "SM" - SIM SMS memory storage The command returns the memory storage status in the format: **+CPMS: <usedr>,<totalr>,<usedw>,<totalw>,<useds>,<totals>** where **<usedr>** - number of SMs stored into **<memr>** **<totalr>** - max number of SMs that **<memr>** can contain **<usedw>** - number of SMs stored into **<memw>** **<totalw>** max number of SMs that **<memw>** can contain **<useds>** - number of SMs stored into **<mems>** **<totals>** - max number of SMS that **<mems>** can contain Note: The only supported memory storage for writing and sending SMs is the SIM internal memory "SM", so **<memw>=<mems>="SM"**. Note: the received class 0 SMS are stored in the "ME" memory regardless the **<mems>** setting and they are automatically deleted at power off. Note: If all parameters are omitted the behavior of Set command is the same as Read command.
AT+CPMS?	Read command reports the message storage status in the format: **+CPMS: <memr>,<usedr>,<totalr>,<memw>,<usedw>,<totalw>, <mems>,<useds>,<totals>** where **<memr>**, **<memw>** and **<mems>** are the selected storage memories for reading, writing and storing respectively.
AT+CPMS=?	Test command reports the supported values for parameters **<memr>**, **<memw>** and **<mems>**
Example	AT+CPMS? +CPMS: "SM",5,10,"SM",5,10,"SM",5,10 OK *you have 5 out of 10 SMS SIM positions occupied*
Reference	GSM 27.005

+CPMS - Preferred Message Storage		SELINT 2
*Note: the behaviour of command **+CPMS** differs depending on whether or not the improved SMS commands operation mode has been enabled (see **#SMSMODE**)*		
(#SMSMODE=0)		
#	**AT+CPMS= <memr>**	Set command selects memory storages **<memr>**, **<memw>** and **<mems>** to be used for reading, writing, sending and storing SMs.
S		

+CPMS - Preferred Message Storage		SELINT 2
MSMODE=0 #SMSMODE=0	**[,<memw>** **[,<mems>]]**	Parameters: **<memr>** - memory from which messages are read and deleted "SM" - SIM SMS memory storage "ME" - **ME** internal storage **<memw>** - memory to which writing and sending operations are made "SM" - SIM SMS memory storage **<mems>** - memory to which received SMs are preferred to be stored "SM" - SIM SMS memory storage The command returns the memory storage status in the format: **+CPMS: <usedr>,<totalr>,<usedw>,<totalw>,<useds>,<totals>** where: **<usedr>** - number of SMs stored into **<memr>** **<totalr>** - max number of SMs that **<memr>** can contain **<usedw>** - number of SMs stored into **<memw>** **<totalw>** max number of SMs that **<memw>** can contain **<useds>** - number of SMs stored into **<mems>** **<totals>** - max number of SMs that **<mems>** can contain Note: The only supported memory storage for writing and sending SMs is the SIM internal memory "SM", so **<memw>=<mems>="SM"**. Note: the received class 0 SMS are stored in the "ME" memory regardless the **<mems>** setting and they are automatically deleted at power off.
#SMSMODE=0	**AT+CPMS?**	Read command reports the message storage status in the format: **+CPMS: <memr>,<usedr>,<totalr>,<memw>,<usedw>,<totalw>,<mems>,<useds>,<totals>** where **<memr>**, **<memw>** and **<mems>** are the selected storage memories for reading, writing and storing respectively.

3.5.5.1.3. Message Format - +CMGF

+CMGF - Message Format	SELINT 0 / 1
AT+CMGF[=[<mode>]]	Set command selects the format of messages used with send, list, read and write commands. Parameter: **<mode>** 0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default) 1 - text mode Note: issuing **AT+CMGF<CR>** is the same as issuing the Read command. Note: issuing **AT+CMGF=<CR>** is the same as issuing the command **AT+CMGF=0<CR>**.
AT+CMGF?	Read command reports the current value of the parameter **<mode>**.
AT+CMGF=?	Test command reports the supported value of **<mode>** parameter.
Reference	GSM 27.005

+CMGF - Message Format	SELINT 2
AT+CMGF=[<mode>]	Set command selects the format of messages used with send, list, read and write commands. Parameter: **<mode>** 0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default) 1 - text mode
AT+CMGF?	Read command reports the current value of the parameter **<mode>**.
AT+CMGF=?	Test command reports the supported value of **<mode>** parameter.
Reference	GSM 27.005

3.5.5.2. Message Configuration

3.5.5.2.1. Service Center Address - +CSCA

+CSCA - Service Center Address	SELINT 0 / 1
AT+CSCA[=[<number>[,<type>]]]	Set command sets the Service Center Address to be used for mobile originated SMS transmissions. Parameter: **<number>** - SC phone number in the format defined by **<type>** **<type>** - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") Note: to use the SM service, is mandatory to set a Service Center Address at which

+CSCA - Service Center Address	SELINT 0 / 1
	service requests will be directed. Note: in Text mode, this setting is used by send and write commands; in PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into the **<pdu>** parameter equals zero. Note: the current settings are stored through **+CSAS** Note: issuing **AT+CSCA<CR>** is the same as issuing the Read command. Note: issuing **AT+CSCA=<CR>** causes an **OK** result code to be issued.
AT+CSCA?	Read command reports the current value of the SCA in the format: **+CSCA: <number>,<type>** Note: if SCA is not present the device reports an error message.
AT+ CSCA=?	Test command returns the **OK** result code.
Reference	GSM 27.005

+CSCA -Service Center Address	SELINT 2
AT+CSCA= <number> [,<type>]	Set command sets the Service Center Address to be used for mobile originated SMS transmissions. Parameter: **<number>** - SC phone number in the format defined by **<type>** **<type>** - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") Note: to use the SM service, is mandatory to set a Service Center Address at which service requests will be directed. Note: in Text mode, this setting is used by send and write commands; in PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into the **<pdu>** parameter equals zero. Note: the current settings are stored through **+CSAS**
AT+CSCA?	Read command reports the current value of the SCA in the format: **+CSCA: <number>,<type>** Note: if SCA is not present the device reports an error message.
AT+CSCA=?	Test command returns the **OK** result code.
Reference	GSM 27.005

3.5.5.2.2. Set Text Mode Parameters - +CSMP

+CSMP - Set Text Mode Parameters	SELINT 0 / 1
AT+CSMP[= **[<fo>** **[,<vp>** **[,<pid>** **[,<dcs>]]]]]**	Set command is used to select values for additional parameters for storing and sending SMs when the text mode is used **(+CMGF=1**) Parameters: **<fo>** - depending on the command or result code: first octet of 3GPP TS 23.040 SMS-DELIVER, SMS-SUBMIT (default 17), SMS-STATUS-REPORT, or SMS-COMMAND (default 2) in integer format. **<vp>** - depending on SMS-SUBMIT **<fo>** setting: 3GPP TS 23.040 TP-Validity-Period either in integer format (default 167) or in quoted time-string format **<pid>** - 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0). **<dcs>** - depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme Note: the current settings are stored through **+CSAS** Note: issuing **AT+CSMP<CR>** is the same as issuing the Read command. Note: issuing **AT+CSMP=<CR>** is the same as issuing the command **AT+CSMP=0<CR>**. Note: **<vp>**, **<pid>** and **<dcs>** default values are loaded from first SIM *SMS Parameters* profile, if present. If it is not present, then the default values are those above indicated.
AT+CSMP?	Read command reports the current setting in the format: **+CSMP: < fo>,<vp>,<pid>,<dcs>**
AT+CSMP=?	Test command reports the supported range of values for **<fo>**, **<vp>**, **<pid>** and **<dcs>** parameters.
Example	*Set the parameters for an outgoing message with 24 hours of validity period and default properties:* AT+CSMP=17,167,0,0 OK
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.038

+CSMP - Set Text Mode Parameters		SELINT 2
*Note: the behaviour of command **+CPMS** differs depending on whether or not the improved SMS commands operation mode has been enabled (see **#SMSMODE**)*		
(#SMSMODE=0)		
# S	**AT+CSMP=** **[<fo>**	Set command is used to select values for additional parameters for storing and sending SMs when the text mode is used (**AT+CMGF=1**)

+CSMP - Set Text Mode Parameters		SELINT 2
M S M O D E = 0 # S M S M O D E = 0 # S M S M O D E = 0 # S M S M O D E = 0	**[,<vp>** **[,<pid>** **[,<dcs>]]]]**	Parameters: **<fo>** - first octet of 3GPP TS 23.040 SMS-SUBMIT in integer format (default 17, i.e. SMS-SUBMIT with validity period in relative format). As first octet of a PDU has the following bit field description (we'll refer to **bit[7]bit[6]bit[5]bit[4]bit[3]bit[2]bit[1]bit[0]**): **bit[1]bit[0]**: Message Type Indicator, 2-bit field describing the message type: all the combinations are converted in [01] (default is [01]); [00] - converted in [01] [01] - SMS-SUBMIT [10] - converted in [01] [11] - converted in [01] **bit[2]**: Reject Duplicates, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]); **bit[4]bit[3]**: Validity Period Format, 2-bit field indicating whether or not the Validity Period field is present (default is [10]): [00] - Validity Period field *not present* [01] - Validity Period field present in *enhanced format*: it is currently converted in [00], i.e. *not present* [10] - Validity Period field present in *relative format*, (i.e. integer type, see below) [11] - Validity Period field present in *absolute format* (i.e. quoted time-string type); we strongly suggest to not use this format because its implementation is currently under refinement **bit[5]**: Status Report Request, 1-bit field indicating the MS is requesting a status report (default is [0]); [0] - MS is not requesting a status report [1] - MS is requesting a status report **bit[6]**: User Data Header Indicator, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]); **bit[7]**: Reply Path, 1-bit field indicating the request for Reply Path (default is [0]); [0] - Reply Path not requested [1] - Reply Path requested **<vp>** - depending on **<fo>** setting: if **<fo>** asks for a Validity Period in *relative format* **<vp>** shall be integer type (default 167, i.e. 24 hours); if **<fo>** asks for a Validity Period in *absolute format* we strongly suggest to modify it in *relative format*, because the implementation of this topic is currently under refinement and it is currently not possible to set **<vp>** with a quoted time string type. (for *relative format* only:) 0..143 - (**<vp>** + 1) x 5 minutes; 144..167 - 12 hours + ((**<vp>** - 143) x 30 minutes); 168..196 - (**<vp>** - 166) x 1 day; 197..255 - (**<vp>** - 192) x 1 week;

+CSMP - Set Text Mode Parameters		SELINT 2
#SMSMODE=0		**<pid>** - 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0). **<dcs>** - depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme Note: the current settings are stored through +CSAS Note: **<vp>**, **<pid>** and **<dcs>** default values are loaded from first SIM *SMS Parameters* profile, if present. If it is not present, then the default values are those above indicated.
	AT+CSMP?	Read command reports the current setting in the format: **+CSMP: < fo>,<vp>,<pid>,<dcs>**
	AT+CSMP=?	Test command returns the **OK** result code.
	Example	*Set the parameters for an outgoing message with 24 hours of validity period and default properties:* AT+CSMP=17,167,0,0 OK

(#SMSMODE=1)		
#SMSMODE=1 #SMSMODE=1	**AT+CSMP=** **[<fo>** **[,<vp>** **[,<pid>** **[,<dcs>]]]]**	Set command is used to select values for additional parameters for storing and sending SMs when the text mode is used (**AT+CMGF=1**) Parameters: **<fo>** - first octet of 3GPP TS 23.040 SMS-SUBMIT or SMS-DELIVER, in integer format (default 17, i.e. SMS-SUBMIT with validity period in relative format). As first octet of a PDU has the following bit field description (**bit[7]bit[6]bit[5]bit[4]bit[3]bit[2]bit[1]bit[0]**): **bit[1]bit[0]**: Message Type Indicator, 2-bit field describing the message type; [00] - SMS-DELIVER; [01] - SMS-SUBMIT (default) ; **bit[2]**: Reject Duplicates, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]); **bit[4]bit[3]**: Validity Period Format, 2-bit field indicating whether or not the Validity Period field is present (default is [10]): [00] - Validity Period field *not present* [01] - Validity Period field present in *enhanced format*(i.e. quoted time-string type, see below) [10] - Validity Period field present in *relative format*, (i.e. integer type, see below) [11] - Validity Period field present in *absolute format* (i.e. quoted time-string type, see below) **bit[5]**: Status Report Request, 1-bit field indicating the MS is requesting a status report (default is [0]);

+CSMP - Set Text Mode Parameters		SELINT 2
#SMSMODE=1		[0] - MS is not requesting a status report [1] - MS is requesting a status report **bit[6]**: User Data Header Indicator, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]); **bit[7]**: Reply Path, 1-bit field indicating the request for Reply Path (default is [0]); [0] - Reply Path not requested [1] - Reply Path requested <**vp**> - depending on <**fo**> setting: a) if <**fo**> asks for a *Not Present* Validity Period, <**vp**> can be any type and it will be not considered; b) if <**fo**> asks for a Validity Period in *relative format*, <**vp**> shall be integer type (default 167, i.e. 24 hours); 0..143 - (<**vp**> + 1) x 5 minutes 144..167 - 12 hours + ((<**vp**> - 143) x 30 minutes) 168..196 - (<**vp**> - 166) x 1 day 197..255 - (<**vp**> - 192) x 1 week
#SMSMODE=1		c) if <**fo**> asks for a Validity Period in *absolute format*, <**vp**> shall be quoted time-string type (see **+CCLK**); this is the only admitted format if <**fo**> value defines SMS-DELIVER as message type
#SMSMODE=1		d) if <**fo**> asks for a Validity Period in *enhanced format*, <**vp**> shall be the quoted hexadecimal representation (string type) of 7 octets, as follows: • the first octet is the **Validity Period Functionality Indicator**, indicating the way in which the other 6 octets are used; let's consider its bit field description: **bit[7]**: extension bit [0] - there are no more VP Fuctionality Indicator extension octets to follow **bit[6]**: Single Shot SM; [0] - the SC is not required to make up to one delivery attempt [1] - the SC is required to make up to one delivery attempt **bit[5]bit[4]bit[3]**: reserved [000] **bit[2]bit[1]bit[0]**: Validity Period Format [000] - No Validity Period specified [001] - Validity Period specified as for the relative format. The following octet contains the VP value as described before; all the other octets are 0's. [010] - Validity Period is relative in integer representation. The following octet contains the VP value in the range 0 to 255, representing 0 to 255 seconds; all the other octets are 0's.
#SMSMODE=1		
#SMSMO		

+CSMP - Set Text Mode Parameters		SELINT 2
DE=1 #SMSMODE=1		[011] - Validity Period is relative in semi-octet representation. The following 3 octets contain the relative time in Hours, Minutes and Seconds, giving the length of the validity period counted from when the SMS-SUBMIT is received by the SC; all the other octets are 0's. **<pid>** - 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0). **<dcs>** - depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme Note: the current settings are stored through **+CSAS** Note: we're storing through **+CSAS** the **<vp>** value too, but only as integer type, i.e. only in its *relative format* Note: **<vp>**, **<pid>** and **<dcs>** default values are loaded from first SIM *SMS Parameters* profile, if present. If it is not present, then the default values are those above indicated.
#SMSMODE=1	**AT+CSMP?**	Read command reports the current setting in the format: **+CSMP: <fo>,<vp>,<pid>,<dcs>** Note: if the Validity Period Format (**<fo>**'s **bit[4]bit[3]**) is [00] (i.e. *Not Present*), **<vp>** is represented just as a quoted empty string (**""**).
#SMSMODE=1	**AT+CSMP=?**	Test command returns the **OK** result code.
#SMSMODE=1	Example	*Set the parameters for an outgoing message with 24 hours of validity period and default properties:* AT+CSMP=17,167,0,0 OK *Set the parameters for an outgoing message with validity period in enhanced format: the **<vp>** string actually codes 24 hours of validity period.* AT+CSMP=9,"01A80000000000" OK *Set the parameters for an outgoing message with validity period in enhanced format: the **<vp>** string actually codes 60 seconds of validity period.* AT+CSMP=9,"023C0000000000" OK *Set the parameters for an outgoing message with validity period in enhanced format: the **<vp>** string actually codes 29 hours 85 minutes 30 seconds of validity period.* AT+CSMP=9,"03925803000000" OK

	Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.038

3.5.5.2.3. Show Text Mode Parameters - +CSDH

+CSDH - Show Text Mode Parameters	SELINT 0 / 1
AT+CSDH[= [<show>]]	Set command controls whether detailed header information is shown in text mode (**+CMGF=1**) result codes. Parameter: **<show>** 0 - do not show header values defined in commands **+CSCA** and **+CSMP** (**<sca>**, **<tosca>**, **<fo>**, **<vp>**, **<pid>** and **<dcs>**) nor **<length>**, **<toda>** or **<tooa>** in **+CMT**, **+CMGL**, **+CMGR** result codes for SMS-DELIVERs and SMS-SUBMITs in text mode. For SMS-COMMANDs in **+CMGR** result code do not show **<pid>**, **<mn>**, **<da>**, **<toda>**, **<length>** or **<cdata>** 1 - show the values in result codes Note: issuing **AT+CSDH<CR>** is the same as issuing the Read command. Note: issuing **AT+CSDH=<CR>** is the same as issuing the command **AT+CSDH=0<CR>**.
AT+CSDH?	Read command reports the current setting in the format: **+CSDH: <show>**
AT+CSDH=?	Test command reports the supported range of values for parameter **<show>**
Reference	GSM 27.005

+CSDH - Show Text Mode Parameters	SELINT 2
AT+CSDH= [<show>]	Set command controls whether detailed header information is shown in text mode (**AT+CMGF=1**) result codes. Parameter: **<show>** 0 - do not show header values defined in commands **+CSCA** and **+CSMP** (**<sca>**, **<tosca>**, **<fo>**, **<vp>**, **<pid>** and **<dcs>**) nor **<length>**, **<toda>** or **<tooa>** in **+CMT**, **+CMGL**, **+CMGR** result codes for SMS-DELIVERs and SMS-SUBMITs in text mode. For SMS-COMMANDs in **+CMGR** result code do not show **<pid>**, **<mn>**, **<da>**, **<toda>**, **<length>** or **<cdata>** 1 - show the values in result codes
AT+CSDH?	Read command reports the current setting in the format: **+CSDH: <show>**
AT+CSDH=?	Test command reports the supported range of values for parameter **<show>**
Reference	GSM 27.005

3.5.5.2.4. Select Cell Broadcast - +CSCB

+CSCB -Select Cell Broadcast Message Types	SELINT 0 / 1
AT+CSCB[= **[<mode>** **[,<mids>** **[,<dcss>]]]]**	Set command selects which types of Cell Broadcast Messages are to be received by the device. Parameter: **<mode>** 0 - the message types defined by **<mids>** and **<dcss>** are accepted (factory default) 1 - the message types defined by **<mids>** and **<dcss>** are rejected **<mids>** - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string (“”). **<dcss>** - Data Coding Schemes, string type: all different possible combinations of CBM data coding schemes; default is empty string (“”). Note: the current settings are stored through **+CSAS** Note: issuing **AT+CSCB<CR>** is the same as issuing the Read command. Note: issuing **AT+CSCB=<CR>** is the same as issuing the command **AT+CSCB=0<CR>**.
AT+CSCB?	Read command reports the current value of parameters **<mode>**, **<mids>** and **<dcss>**.
AT+CSCB=?	Test command returns the range of values for parameter **<mode>**.
Example	AT+CSCB? +CSCB: 1,"","” OK *(all CBMs are accepted, none is rejected)* AT+CSCB=0,"0,1,300-315,450","0-3" OK
Reference	GSM 27.005, 3GPP TS 23.041, 3GPP TS 23.038.

+CSCB -Select Cell Broadcast Message Types	SELINT 2
AT+CSCB= **[<mode>[,<mids>** **[,<dcss>]]]**	Set command selects which types of Cell Broadcast Messages are to be received by the device. Parameters: **<mode>** 0 - the message types defined by **<mids>** and **<dcss>** are accepted (factory default) 1 - the message types defined by **<mids>** and **<dcss>** are rejected **<mids>** - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string (“”). **<dcss>** - Data Coding Schemes, string type: all different possible combinations of CBM data coding schemes; default is empty string (“”). Note: the current settings are stored through **+CSAS**
AT+CSCB?	Read command reports the current value of parameters **<mode>**, **<mids>** and

+CSCB -Select Cell Broadcast Message Types	SELINT 2
	<dcss>.
AT+CSCB=?	Test command returns the range of values for parameter **<mode>**.
Example	AT+CSCB? +CSCB: 1,"",""" OK *(all CBMs are accepted, none is rejected)* AT+CSCB=0,"0,1,300-315,450","0-3" OK
Reference	GSM 27.005, 3GPP TS 23.041, 3GPP TS 23.038.

3.5.5.2.5. Save Settings - +CSAS

+CSAS - Save Settings	SELINT 0 / 1
AT+CSAS [=<profile>]	Execution command saves settings which have been made by the **+CSCA**, **+CSMP** and **+CSCB** commands in local non volatile memory. Parameter: **<profile>** 0 - it saves the settings to NVM (factory default). 1..n - SIM profile number; the value of n depends on the SIM and its max is 3. Note: certain settings may not be supported by the SIM and therefore they are always saved to NVM, regardless the value of **<profile>**. Note: If parameter is omitted the settings are saved in the non volatile memory. Note: +CSCB <mids> (Message Identifiers) parameter can be saved to SIM only if the "Cell broadcast message identifier selection" file is present on the SIM itself. This file, if present, has storage for only a single set of data. Therefore, it is not possible to save different <mids> in different SIM profiles; <mids> value, once changed and saved, will be the same for all SIM profiles.
AT+CSAS?	Read command has the same effect as Execution command with parameter omitted.
AT+CSAS=?	Test command returns the possible range of values for the parameter **<profile>**.
Reference	GSM 27.005

+CSAS - Save Settings	SELINT 2
AT+CSAS [=<profile>]	Execution command saves settings which have been made by the **+CSCA**, **+CSMP** and **+CSCB** commands in local non volatile memory. Parameter: **<profile>** 0 - it saves the settings to NVM (factory default). 1..n - SIM profile number; the value of n depends on the SIM and its max is 3. Note: certain settings may not be supported by the SIM and therefore they are always saved to NVM, regardless the value of **<profile>**.

+CSAS - Save Settings	SELINT 2
	Note: If parameter is omitted the settings are saved in the non volatile memory. Note: +CSCB <mids> (Message Identifiers) parameter can be saved to SIM only if the "Cell broadcast message identifier selection" file is present on the SIM itself. This file, if present, has storage for only a single set of data. Therefore, it is not possible to save different <mids> in different SIM profiles; <mids> value, once changed and saved, will be the same for all SIM profiles.
AT+CSAS=?	Test command returns the possible range of values for the parameter **<profile>**.
Reference	GSM 27.005

3.5.5.2.6. Restore Settings - +CRES

+CRES - Restore Settings	SELINT 0 / 1
AT+CRES [=<profile>]	Execution command restores message service settings saved by **+CSCA** command from either NVM or SIM. Parameter: **<profile>** 0 - it restores message service settings from NVM. 1..n - it restores message service settings from SIM. The value of n depends on the SIM and its max is 3. Note: certain settings may not be supported by the SIM and therefore they are always restored from NVM, regardless the value of **<profile>**. Note: If parameter is omitted the command restores message service settings from NVM.
AT+CRES?	Read command has the same effect as Execution command with parameter omitted.
AT+CRES=?	Test command returns the possible range of values for the parameter **<profile>**.
Reference	GSM 27.005

+CRES - Restore Settings	SELINT 2
AT+CRES [=<profile>]	Execution command restores message service settings saved by **+CSAS** command from either NVM or SIM. Parameter: **<profile>** 0 - it restores message service settings from NVM. 1..n - it restores message service settings from SIM. The value of n depends on the SIM and its max is 3. Note: certain settings may not be supported by the SIM and therefore they are always restored from NVM, regardless the value of **<profile>**. Note: If parameter is omitted the command restores message service settings from

+CRES - Restore Settings	SELINT 2
	NVM.
AT+CRES=?	Test command returns the possible range of values for the parameter **<profile>**.
Reference	GSM 27.005

3.5.5.3. Message Receiving And Reading

3.5.5.3.1. New Message Indications - +CNMI

+CNMI - New Message Indications To Terminal Equipment	SELINT 0 / 1
AT+CNMI[=[<mode>[,<mt>[,<bm>[,<ds>[,<bfr>]]]]]]	Set command selects the behaviour of the device on how the receiving of new messages from the network is indicated to the **DTE**. Parameter: **<mode>** - unsolicited result codes buffering option 0 - Buffer unsolicited result codes in the **TA**. If **TA** result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications. 1 - Discard indication and reject new received message unsolicited result codes when **TA-TE** link is reserved, otherwise forward them directly to the **TE**. 2 - Buffer unsolicited result codes in the **TA** in case the **DTE** is busy and flush them to the **TE** after reservation. Otherwise forward them directly to the **TE**. 3 - if **<mt>** is set to 1 an indication via 100 ms break is issued when a SMS is received while the module is in GPRS online mode. It enables the hardware ring line for 1 s. too. **<mt>** - result code indication reporting for SMS-DELIVER 0 - No SMS-DELIVER indications are routed to the **TE**. 1 - If SMS-DELIVER is stored into **ME/TA**, indication of the memory location is routed to the **TE** using the following unsolicited result code: **+CMTI: <memr>,<index>** where: **<memr>** - memory storage where the new message is stored "SM" "ME" **<index>** - location on the memory where SM is stored. 2 - SMS-DELIVERs (except class 2 messages and messages in the message waiting indication group) are routed directly to the **TE** using the following unsolicited result code: **(PDU Mode)** **+CMT: ,<length><CR><LF><pdu>** where: **<length>** - PDU length **<pdu>** - PDU message **(TEXT Mode)**

+CNMI - New Message Indications To Terminal Equipment	SELINT 0 / 1

+CMT:<oa>,,<scts>*[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]*<CR><LF><data> (the information written in italics will be present depending on **+CSDH** last setting)
where:
<oa> - originating address, string type converted in the currently selected character set (see **+CSCS**)
<scts> - arrival time of the message to the SC
<tooa>, ***<tosca>*** - type of number **<oa>** or ***<sca>***:
129 - number in national format
145 - number in international format (contains the "+")
<fo> - first octet of 3GPP TS 23.040
<pid> - Protocol Identifier
<dcs> - Data Coding Scheme
<sca> - Service Centre address, string type, converted in the currently selected character set (see **+CSCS**)
<length> - text length
<data> - TP-User-Data

Class 2 messages and messages in the message waiting indication group (stored message) result in indication as defined in **<mt>=1**.
3 - Class 3 SMS-DELIVERs are routed directly to **TE** using unsolicited result codes defined in **<mt>=2**. Messages of other data coding schemes result in indication as defined in **<mt>=1**.

<bm> - broadcast reporting option
0 - Cell Broadcast Messages are not sent to the **DTE**
2 - New Cell Broadcast Messages are sent to the **DTE** with the unsolicited result code:

(PDU Mode)

+CBM: <PDU>
where:
<PDU> - message PDU

(TEXT Mode)

+CBM:<sn>,<mid>,<dcs>,<pag>,<pags><CR><LF><data>
where:
<sn> - message serial number
<mid> - message ID
<dcs> - Data Coding Scheme
<pag> - page number
<pags> - total number of pages of the message
<data> - CBM Content of Message

<ds> - SMS-STATUS-REPORTs reporting option
0 - status report receiving is not reported to the **DTE**
1 - the status report is stored and is also sent to the **DTE** with the following

+CNMI - New Message Indications To Terminal Equipment	SELINT 0 / 1
	unsolicited result code: **(PDU Mode)** **+CDS: <length><CR><LF><PDU>** where: **<length>** - PDU length **<PDU>** - message PDU **(TEXT Mode)** **+CDS: <fo>,<mr>,,,<scts>,<dt>,<st>** where: **<fo>** - first octet of the message PDU **<mr>** - message reference number **<scts>** - arrival time of the message to the SC **<dt>** - sending time of the message **<st>** - message status as coded in the PDU 2 - if a status report is stored, then the following unsolicited result code is sent: **+CDSI: <memr>,<index>** where: **<memr>** - memory storage where the new message is stored "SM" **<index>** - location on the memory where SM is stored **<bfr>** - buffered result codes handling method: 0 - **TA** buffer of unsolicited result codes defined within this command is flushed to the **TE** when **<mode>=1..3** is entered (**OK** response shall be given before flushing the codes) 1 - TA buffer of unsolicited result codes defined within this command is cleared when **<mode>=1..3** is entered. Note: issuing **AT+CNMI<CR>** is the same as issuing the Read command. Note: issuing **AT+CNMI=<CR>** is the same as issuing the command **AT+CNMI=0<CR>**.
AT+CNMI?	Read command returns the current parameter settings for **+CNMI** command in the form: **+CNMI: <mode>,<mt>,<bm>,<ds>,<bfr>**
AT+CNMI=?	Test command reports the supported range of values for the **+CNMI** command parameters. For compatibility with previous versions, Test command returns: **+CNMI: (0-2),*(0-3),(0,2),(0-2),(0,1)*** An enhanced version of Test command has been defined: **AT+CNMI=??**, that provides the complete range of values for parameter **<mode>**.

+CNMI - New Message Indications To Terminal Equipment	SELINT 0 / 1
AT+CNMI=??	Enhanced test command reports the supported range of values for all the **+CNMI** command parameters.
Reference	GSM 27.005
Note	**DTR** signal is ignored, hence the indication is sent even if the **DTE** is inactive (**DTR** signal is Low). In this case the unsolicited result code may be lost so if MODULE remains active while **DTE** is not, at **DTE** startup is suggested to check whether new messages have reached the device meanwhile with command **AT+CMGL=0** that lists the new messages received.

+CNMI - New Message Indications To Terminal Equipment		SELINT 2
*Note: the behaviour of command **+CNMI** differs depending on whether or not the improved SMS commands operation mode has been enabled (see **#SMSMODE**)*		
(#SMSMODE=0)		
#SMSMODE=0	**AT+CNMI=[<mode>[,<mt>[,<bm>[,<ds>[,<bfr>]]]]]**	Set command selects the behaviour of the device on how the receiving of new messages from the network is indicated to the **DTE**. Parameter: **<mode>** - unsolicited result codes buffering option 0 - Buffer unsolicited result codes in the **TA**. If **TA** result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications. 1 - Discard indication and reject new received message unsolicited result codes when **TA-TE** link is reserved, otherwise forward them directly to the **TE**. 2 - Buffer unsolicited result codes in the TA in case the **DTE** is busy and flush them to the TE after reservation. Otherwise forward them directly to the TE. 3 - if **<mt>** is set to 1 an indication via 100 ms break is issued when a SMS is received while the module is in GPRS online mode. It enables the hardware ring line for 1 s. too. **<mt>** - result code indication reporting for SMS-DELIVER 0 - No SMS-DELIVER indications are routed to the TE. 1 - If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE using the following unsolicited result code: **+CMTI: <mems>,<index>** where: **<mems>** - memory storage where the new message is stored (see **+CPMS**) **<index>** - location on the memory where SMS is stored. 2 - SMS-DELIVERs (except class 2 messages and messages in the “store” message waiting indication group) are routed directly to the TE using the following unsolicited result code: **(PDU Mode)** **+CMT: <alpha>,<length><CR><LF><pdu>**

3.5.5.3.2. List Messages - +CMGL

+CMGL - List Messages	SELINT 0 / 1
AT+CMGL [=<stat>]	Execution command reports the list of all the messages with status value **<stat>** stored into **<memr>** message storage (**<memr>** is the message storage for read and delete SMs as last settings of command **+CPMS**). The parameter type and the command output depend on the last settings of command **+CMGF** (message format to be used) **(PDU Mode)** Parameter: **<stat>** 0 - new message 1 - read message 2 - stored message not yet sent

[39] The SM is not stored!

+CMGL - List Messages	SELINT 0 / 1

3 - stored message already sent
4 - all messages.

Each message to be listed is represented in the format:

+CMGL: <index>,<stat>,<length><CR><LF><pdu>

where
<index> - message position in the memory storage list.
<stat> - status of the message
<length> - length of the PDU in bytes
<pdu> - message in PDU format according to GSM 3.40

(Text Mode)

Parameter:
<stat>
"REC UNREAD" - new message
"REC READ" - read message
"STO UNSENT" - stored message not yet sent
"STO SENT" - stored message already sent
"ALL" - all messages.

Each message to be listed is represented in the format (the information written in italics will be present depending on **+CSDH** last setting):

+CMGL: <index>,<stat>,<oa/da>,,*[,<tooa/toda>,<length>]*
<CR><LF> <data>

where
<index> - message position in the storage
<stat> - message status
<oa/da> - originator/destination address, string type, represented in the currently selected character set (see **+CSCS**)
<*tooa/toda*> - type of number **<oa/da>**
129 - number in national format
145 - number in international format (contains the "+")
<*length*> - text length
<data> - **TP-User-Data**

Each message delivery confirm is represented in the format**:**

+CMGL: <index>,<stat>,<fo>,<mr>,,,<scts>,<dt>,<st>

where
<index> - message position in the storage
<stat> - message status
<fo> - first octet of the message PDU

+CMGL - List Messages	SELINT 0 / 1
	<mr> - message reference number **<scts>** - arrival time of the message to the SC **<dt>** - sending time of the message **<st>** - message status as coded in the PDU Note: **OK** result code is sent at the end of the listing. Note: If parameter is omitted the command returns the list of sms with "REC UNREAD" status.
AT+CMGL?	Read command has the same effect as Execution command with parameter omitted
AT+CMGL=?	Test command returns a list of supported **<stat>s**
Note	If Text Mode **(+CMGF=1**) the Test command output is not included in parenthesis **AT+CMGL=?** **+CMGL: "REC UNREAD","REC READ","STO UNSENT",** **"STO SENT","ALL"**
Note	The improving command **@CMGL** has been defined
Reference	GSM 27.005

+CMGL - List Messages		SELINT 2
#SMSMODE=1 #SMSMODE=1 #SMSMODE=1 #SMS		0 - new message 1 - read message 2 - stored message not yet sent 3 - stored message already sent 4 - all messages. If there is at least one message to be listed the representation format is: **+CMGL:** **<index>,<stat>,<alpha>,<length><CR><LF><pdu>[<CR><LF>** **+CMGL: <index>,<stat>,<alpha>,<length><CR><LF><pdu>[...]]** where: **<index>** - message position in the memory storage list. **<stat>** - status of the message **<alpha>** - string type alphanumeric representation of **<da>** or **<oa>**, corresponding to an entry found in the phonebook; used character set is the one selected with command **+CSCS**. **<length>** - length of the PDU in bytes **<pdu>** - message in PDU format according to GSM 3.40 **(Text Mode)** Parameter: **<stat>** "REC UNREAD" - new message "REC READ" - read message "STO UNSENT" - stored message not yet sent "STO SENT" - stored message already sent "ALL" - all messages. The representation format for stored messages (either sent or unsent) or received messages (either read or unread, not message delivery confirm) is (the information written in italics will be present depending on **+CSDH** last setting): **+CMGL: <index>,<stat>,<oa/da>,<alpha>,<scts>*[,<tooa/toda>,<length>]*<CR><LF><data>[<CR><LF>** **+CMGL: <index>,<stat>,<oa/da>,<alpha>,<scts>*[,<tooa/toda>,<length>]*<CR><LF><data>[...]]** where: **<index>** - message position in the storage **<stat>** - message status **<oa/da>** - originator/destination address, string type , represented in the currently selected character set (see **+CSCS**)

+CMGL - List Messages		SELINT 2
MODE=1 #SMSMODE=1 #SMSMODE=1 #SMSMODE=1		**<alpha>** - string type alphanumeric representation of **<da>** or **<oa>**, corresponding to an entry found in the phonebook; used character set is the one selected with command **+CSCS**. **<scts>** - TP-Service Centre Time Stamp in Time String Format **<*tooa/toda*>** - type of number **<oa/da>** 129 - number in national format 145 - number in international format (contains the "+") **<*length*>** - text length **<data>** - TP-User-Data • If **<dcs>** indicates that GSM03.38 default alphabet is used: - if TE character set other than "HEX" (refer command Select TE Character Set **+CSCS)** : ME/TA converts GSM alphabet into current TE character set - if TE character set is "HEX": ME/TA converts each 7-bit character of GSM 7 bit default alphabet into two IRA character long hexadecimal number (e.g. character Π (GSM 7 bit default alphabet 23) is presented as 17 (IRA 49 and 55)) • If **<dcs>** indicates that 8-bit or UCS2 data coding scheme is used, each 8-bit octet will be converted into two IRA character long hexadecimal number (e.g. octet 0x2A will be converted as two characters 0x32 0x41) • If <fo> indicates that a UDH is present each 8-bit octet will be converted into two IRA character long hexadecimal number. The <length> indicates text length in characters without UDH length. If there is at least one message delivery confirm to be listed the representation format is**:** **+CMGL: <index>,<stat>,<fo>,<mr>,<ra>,<tora>,<scts>,<dt>,<st>** **[<CR><LF>** **+CMGL: <index>,<stat>,<fo>,<mr>,<ra>,<tora>,<scts>,<dt>,<st>** **[...]]** where **<index>** - message position in the storage **<stat>** - message status **<fo>** - first octet of the message PDU **<mr>** - message reference number; 3GPP TS 23.040 TP-Message-Reference in integer format **<ra>** - recipient address, string type , represented in the currently selected character set (see **+CSCS**) **<tora>** - type of number <ra> **<scts>** - arrival time of the message to the SC **<dt>** - sending time of the message **<st>** - message status as coded in the PDU

+CMGL - List Messages		SELINT 2
		Note: If parameter is omitted the command returns the list of sms with "**REC UNREAD**" status. Note: the order in which the messages are reported by **+CMGL** corresponds to their position in the memory storage
	AT+CMGL=?	Test command returns a list of supported **<stat>**s
	Reference	GSM 27.005, 3GPP TS 23.040

3.5.5.3.3. List Messages - @CMGL

@CMGL - List Messages Improved	SELINT 0
AT@CMGL [=<stat>]	Execution command reports the list of all the messages with status value **<stat>** stored into **<memr>** message storage (**<memr>** is the message storage for read and delete SMs as last settings of command **+CPMS**). The parameter type and the command output depend on the last settings of command **+CMGF** (message format to be used) **(PDU Mode)** Parameter: **<stat>** 0 - new message 1 - read message 2 - stored message not yet sent 3 - stored message already sent 4 - all messages. Each message to be listed is represented in the format: **@CMGL: <index>,<stat>,<length><CR><LF><pdu>** where **<index>** - message position in the memory storage list. **<stat>** - status of the message **<length>** - length of the PDU in bytes **<pdu>** - message in PDU format according to GSM 3.40 **(Text Mode)** Parameter: **<stat>** "REC UNREAD" - new message "REC READ" - read message "STO UNSENT" - stored message not yet sent "STO SENT" - stored message already sent "ALL" - all messages.

@CMGL - List Messages Improved	**SELINT 0**
	Each message to be listed is represented in the format (the information written in italics will be present depending on **+CSDH** last setting): **@CMGL: <index>,<stat>,<oa/da>,,*[,<tooa/toda>,<length>]*** **<CR><LF> <data>** where **<index>** - message position in the storage **<stat>** - message status **<oa/da>** - originator/destination address, string type, represented in the currently selected character set (see **+CSCS**) ***<tooa/toda>*** - type of number **<oa/da>** 129 - number in national format 145 - number in international format (contains the "+") ***<length>*** - text length **<data>** - TP-User-Data Each message delivery confirm is represented in the format**:** **@CMGL: <index>,<stat>,<fo>,<mr>,,,<scts>,<dt>,<st>** where **<index>** - message position in the storage **<stat>** - message status **<fo>** - first octet of the message PDU **<mr>** - message reference number **<scts>** - arrival time of the message to the SC **<dt>** - sending time of the message **<st>** - message status as coded in the PDU Note: The command differs from the **+CMGL** because at the end of the listing a **<CR><LF>** is put before the **OK** result code. Note: If parameter is omitted the command returns the list of sms with "REC UNREAD" status.
AT@CMGL?	Read command has the same effect as Execution command with parameter omitted
AT@CMGL=?	Test command returns a list of supported **<stat>s**
Note	If Text Mode **(+CMGF=1**) the Test command output is not included in parenthesis **AT@CMGL=?** **@CMGL: "REC UNREAD","REC READ","STO UNSENT",** **"STO SENT","ALL"**
Reference	GSM 27.005

@CMGL - List Messages Improved	**SELINT 1**
AT@CMGL [=<stat>]	Execution command reports the list of all the messages with status value **<stat>** stored into **<memr>** message storage (**<memr>** is the message storage for read and delete SMs as last settings of command **+CPMS**). The parameter type and the command output depend on the last settings of command **+CMGF** (message format to be used) **(PDU Mode)** Parameter: **<stat>** 0 - new message 1 - read message 2 - stored message not yet sent 3 - stored message already sent 4 - all messages. Each message to be listed is represented in the format: **@CMGL: <index>,<stat>,<length><CR><LF><pdu>** where **<index>** - message position in the memory storage list. **<stat>** - status of the message **<length>** - length of the PDU in bytes **<pdu>** - message in PDU format according to GSM 3.40 **(Text Mode)** Parameter: **<stat>** "REC UNREAD" - new message "REC READ" - read message "STO UNSENT" - stored message not yet sent "STO SENT" - stored message already sent "ALL" - all messages. Each message to be listed is represented in the format: **@CMGL: <index>,<stat>,<oa/da>[,,,<tooa/toda>,<length>]** **<CR><LF> <data>** where **<index>** - message position in the storage **<stat>** - message status **<oa/da>** - originator/destination address, string type, represented in the currently selected character set (see **+CSCS**) **<tooa/toda>** - type of number **<oa/da>** 129 - number in national format

@CMGL - List Messages Improved	SELINT 1
	145 - number in international format (contains the "+") **<length>** - text length **<data>** - TP-User-Data Each message delivery confirm is represented in the format**:** **@CMGL: <index>,<stat>,<fo>,<mr>,,,<scts>,<dt>,<st>** where **<index>** - message position in the storage **<stat>** - message status **<fo>** - first octet of the message PDU **<mr>** - message reference number **<scts>** - arrival time of the message to the SC **<dt>** - sending time of the message **<st>** - message status as coded in the PDU Note: The command differs from the **+CMGL** because at the end of the listing a **<CR><LF>** is put before the **OK** result code. AT@CMGL?	Read command has the same effect as Execution command with parameter omitted
AT@CMGL=?	Test command returns a list of supported **<stat>s**
Note	If Text Mode **(+CMGF=1)** the Test command output is not included in parenthesis **AT@CMGL=?** **@CMGL: "REC UNREAD","REC READ","STO UNSENT",** **"STO SENT","ALL"**
Reference	GSM 27.005

3.5.5.3.4. Read Message - +CMGR

+CMGR - Read Message	SELINT 0 / 1
AT+CMGR= **<index>**	Execution command reports the message with location value **<index>** from **<memr>** message storage (**<memr>** is the message storage for read and delete SMs as last settings of command **+CPMS**). Parameter: **<index>** - message index. The output depends on the last settings of command **+CMGF** (message format to be used) **(PDU Mode)** The output has the following format:

+CMGR - Read Message	SELINT 0 / 1

+CMGR: <stat>,<length><CR><LF><pdu>

where
<stat> - status of the message
0 - new message
1 - read message
2 - stored message not yet sent
3 - stored message already sent
<length> - length of the PDU in bytes.
<pdu> - message in PDU format according to GSM 3.40.

The status of the message and entire message data unit **<pdu>** is returned.

(Text Mode)

Output format for received messages (the information written in italics will be present depending on **+CSDH** last setting):

+CMGR: <stat>,<oa>,,<scts> ***[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]*****<CR><LF><data>**

Output format for either sent or unsent messages:
+CMGR: <stat>,<da>,*[,<toda>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]*<CR><LF><data>

Output format for message delivery confirm:
+CMGR: <stat>,<fo>,<mr>,,,<scts>,<dt>,<st>

where:
<stat> - status of the message
"REC UNREAD" - new received message unread
"REC READ" - received message read
"STO UNSENT" - message stored not yet sent
"STO SENT" - message stored already sent
<fo> - first octet of the message PDU
<mr> - message reference number
<scts> - arrival time of the message to the SC
<dt> - sending time of the message
<st> - message status as coded in the PDU
<pid> - Protocol Identifier
<dcs> - Data Coding Scheme
<oa> - Originator address, string type represented in the currently selected character set (see **+CSCS**)
<da> - Destination address, string type represented in the currently selected character set (see **+CSCS**)
<sca> - Service Centre number
<tooa>,***<toda >***,***<tosca>*** - type of number **<oa>**,**<da>**,***<sca>***

+CMGR - Read Message	SELINT 0 / 1
	129 - number in national format 145 - number in international format (contains the "+") <***length***> - text length <**data**> - TP-User_data Note: in both cases if status of the message is 'received unread', status in the storage changes to 'received read'. Note: an error result code is sent on empty record <**index**>.
AT+CMGR=?	Test command returns the **OK** result code.
Note	The improving command **@CMGR** has been defined

3.5.5.3.5. Read Message - @CMGR

@CMGR - Read Message Improved		SELINT 0
AT@CMGR=<index>	Execution command reports the message with location value **<index>** from **<memr>** message storage (**<memr>** is the message storage for read and delete SMs as last settings of command **+CPMS**). Parameter: **<index>** - message index. The output depends on the last settings of command **+CMGF** (message format to be used) **(PDU Mode)** The output has the following format: **@CMGR: <stat>,<length><CR><LF><pdu>**	

@CMGR - Read Message Improved	SELINT 0

where
<stat> - status of the message
0 - new message
1 - read message
2 - stored message not yet sent
3 - stored message already sent
<length> - length of the PDU in bytes.
<pdu> - message in PDU format according to GSM 3.40.

The status of the message and entire message data unit **<pdu>** is returned.

(Text Mode)
Output format for received messages (the information written in italics will be present depending on **+CSDH** last setting):

@CMGR: <stat>,<oa>,,<scts> ***[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]*** **<CR><LF><text>**

Output format for either sent or unsent messages:
@CMGR: <stat>,<da>,*[,<toda>,<fo>,<pid>,<dcs>*,,*<sca>,<tosca>,<length>]*<CR><LF><text>

Output format for message delivery confirm:
@CMGR: <stat>,<fo>,<mr>,,,<scts>,<dt>,<st>

where:
<stat> - status of the message
"REC UNREAD" - new received message unread
"REC READ" - received message read
"STO UNSENT" - message stored not yet sent
"STO SENT" - message stored already sent
<fo> - first octet of the message PDU
<mr> - message reference number
<scts> - arrival time of the message to the SC
<dt> - sending time of the message
<st> - message status as coded in the PDU
<pid> - Protocol Identifier
<dcs> - Data Coding Scheme
<oa> - Originator address, string type represented in the currently selected character set (see **+CSCS**)
<da> - Destination address, string type represented in the currently selected character set (see **+CSCS**)
<sca> - Service Centre number
<tooa>,***<toda >***,***<tosca>*** - type of number **<oa>**,**<da>**,***<sca>***
129 - number in national format
145 - number in international format (contains the "+")

@CMGR - Read Message Improved	SELINT 0
	<***length***> - text length <**text**> - message text Note: the command differs from the **+CMGR** because after the message <**pdu**> or <**text**> a <**CR**><**LF**> is put before the **OK** result code. Note: in both cases if status of the message is 'received unread', status in the storage changes to 'received read'. Note: an error result code is sent on empty record <**index**>.

3.5.5.4. Message Sending And Writing

3.5.5.4.1. Send Message - +CMGS

+CMGS - Send Message	**SELINT 0 / 1**
(PDU Mode) **AT+CMGS= <length>**	**(PDU Mode)** Execution command sends to the network a message. Parameter: **<length>** - length of the PDU to be sent in bytes (excluding the SMSC address octets). 7..164 After command line is terminated with **<CR>**, the device responds sending a four character sequence prompt: **<CR><LF><greater_than><space> (IRA 13, 10, 62, 32)** and waits for the specified number of bytes. Note: the **DCD** signal shall be in **ON** state while PDU is given. Note: the echoing of given characters back from the TA is controlled by echo command **E** Note: the **PDU** shall be hexadecimal format (each octet of the **PDU** is given as two IRA character long hexadecimal number) and given in one line. Note: when the length octet of the SMSC address (given in the **PDU**) equals zero, the SMSC address set with command **+CSCA** is used; in this case the SMSC Type-of-Address octet shall not be present in the **PDU**. To send the message issue **Ctrl-Z** char (0x1A hex). To exit without sending the message issue **ESC** char (0x1B hex). If message is successfully sent to the network, then the result is sent in the format: **+CMGS: <mr>** where **<mr>** - message reference number. Note: if message sending fails for some reason, an error code is reported. Note: care must be taken to ensure that during the command execution, which may take several seconds, no other SIM interacting commands are issued.
(Text Mode)	**(Text Mode)**

+CMGS - Send Message	SELINT 0 / 1
AT+CMGS=<da>[,<toda>]	Execution command sends to the network a message. Parameters: **<da>** - destination address, string type. **<toda>** - type of destination address 129 - number in national format 145 - number in international format (contains the "+") After command line is terminated with **<CR>**, the device responds sending a four character sequence prompt: **<CR><LF><greater_than><space> (IRA 13, 10, 62, 32)** After this prompt text can be entered; the entered text should be formatted as follows: - if current **<dcs>** (see **+CSMP**) indicates that GSM03.38 default alphabet is used and current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A; **backspace** can be used to delete last character and **carriage returns** can be used. - if current **<dcs>** (see **+CSMP**) indicates that 8-bit or UCS2 data coding scheme is used or current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the **'asterisk'** will be entered as **2A** (**IRA50** and **IRA65**) and this will be converted to an octet with integer value **0x2A**) Note: the **DCD** signal shall be in **ON** state while text is entered. Note: the echoing of entered characters back from the TA is controlled by echo command **E** To send the message issue **Ctrl-Z** char (0x1A hex). To exit without sending the message issue **ESC** char (0x1B hex). If message is successfully sent to the network, then the result is sent in the format: **+CMGS: <mr>** where **<mr>** - message reference number. Note: if message sending fails for some reason, an error code is reported. Note: care must be taken to ensure that during the command execution, which may take several seconds, no other SIM interacting commands are issued.

+CMGS - Send Message	**SELINT 0 / 1**
	Note: it is possible to send a concatenation of at most 10 SMs; the maximum number of chars depends on the **<dcs>**: 1530 chars if 3GPP TS 23.038 default alphabet is used, 1340 chars if 8-bit is used, 670 chars if UCS2 is used
Note	To avoid malfunctions is suggested to wait for the **+CMGS: <mr>** or **+CMS ERROR: <err>** response before issuing further commands.

3.5.5.4.3. Write Message To Memory - +CMGW

+CMGW - Write Message To Memory	SELINT 0 / 1
(PDU Mode) **AT+CMGW=** **<length>** **[,<stat>]**	**(PDU Mode)** Execution command writes in the **<memw>** memory storage a new message. Parameter: **<length>** - length in bytes of the PDU to be written. 7..164 **<stat>** - message status. 0 - new message 1 - read message 2 - stored message not yet sent (default) 3 - stored message already sent The device responds to the command with the prompt '>' and waits for the specified number of bytes.

+CMGW - Write Message To Memory	SELINT 0 / 1
	To write the message issue **Ctrl-Z** char (0x1A hex). To exit without writing the message issue **ESC** char (0x1B hex). If message is successfully written in the memory, then the result is sent in the format: **+CMGW: <index>** where: **<index>** - message location index in the memory **<memw>**. If message storing fails for some reason, an error code is reported. Note: care must be taken to ensure that during the command execution, no other SIM interacting commands are issued. Note: in PDU Mode, only SUBMIT messages can be stored in memory and only with status 2 or 3.
(Text Mode) **AT+CMGW[=<da>[,<toda>[,<stat>]]]**	**(Text Mode)** Execution command writes in the **<memw>** memory storage a new message. Parameters: **<da>** - destination address, string type represented in the currently selected character set (see **+CSCS**). **<toda>** - type of destination address. 129 - number in national format 145 - number in international format (contains the "+") **<stat>** - message status. "REC UNREAD" - new received message unread "REC READ" - received message read "STO UNSENT" - message stored not yet sent (default) "STO SENT" - message stored already sent After command line is terminated with **<CR>**, the device responds sending a four character sequence prompt: **<CR><LF><greater_than><space> (IRA 13, 10, 62, 32)** After this prompt text can be entered; the entered text should be formatted as follows: - if current **<dcs>** (see **+CSMP**) indicates that GSM03.38 default alphabet is used and current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A; **backspace** can be used to delete last character and **carriage returns** can be used.

+CMGW - Write Message To Memory	SELINT 0 / 1
	- if current **<dcs>** (see **+CSMP**) indicates that 8-bit or UCS2 data coding scheme is used or current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the **'asterisk'** will be entered as **2A** (**IRA50** and **IRA65**) and this will be converted to an octet with integer value **0x2A**) Note: the **DCD** signal shall be in ON state while text is entered. Note: the echoing of entered characters back from the TA is controlled by echo command **E** To write the message issue **Ctrl-Z** char (0x1A hex). To exit without writing the message issue **ESC** char (0x1B hex). If message is successfully written in the memory, then the result is sent in the format: **+CMGW: <index>** where: **<index>** - message location index in the memory **<memw>**. If message storing fails for some reason, an error code is reported. Note: care must be taken to ensure that during the command execution, no other SIM interacting commands are issued. Note: it is possible to save a concatenation of at most 10 SMs; the maximum number of chars depends on the **<dcs>**: 1530 chars if 3GPP TS 23.038 default alphabet is used, 1340 chars if 8-bit is used, 670 chars if UCS2 is used. Note: in Text Mode, only SUBMIT messages can be stored in memory and only with status "STO UNSENT" or "STO SENT".

Note: the echoing of entered characters back from the TA is controlled by echo command **E** To write the message issue **Ctrl-Z** char (**0x1A** hex). To exit without writing the message issue **ESC** char (**0x1B** hex). If message is successfully written in the memory, then the result is sent in the format: **+CMGW: <index>** where: **<index>** - message location index in the memory **<memw>**. If message storing fails for some reason, an error code is reported. Note: care must be taken to ensure that during the command execution, no other SIM interacting commands are issued. Note: it is possible to save a concatenation of at most 10 SMs; the maximum number of chars depends on the **<dcs>**: 1530 chars if 3GPP TS 23.038 default alphabet is used, 1340 chars if 8-bit is used, 670 chars if UCS2 is used. If entered text is longer than this maximum value an error is raised. Note: in text mode, not only SUBMIT messages can be stored in SIM as per #SMSMODE=0, but also DELIVER messages. The type of saved message depends upon the current <fo> parameter (see **+CSMP**). For a DELIVER message, current <vp> parameter (see **+CSMP**) is used to set the message Service Centre Time Stamp <scts>, so it has to be an absolute time string, e.g. "09/01/12,11:15:00+04". SUBMIT messages can only be stored with status "STO UNSENT" or "STO SENT"; DELIVER messages can only be stored with status "REC UNREAD" or "REC READ".
	AT+CMGW=?	Test command returns the **OK** result code.
	Reference	GSM 27.005
	Note	To avoid malfunctions is suggested to wait for the **+CMGW: <index>** or **+CMS ERROR: <err>** response before issuing further commands.

3.5.5.4.4. Delete Message - +CMGD

+CMGD - Delete Message	SELINT 0 / 1
AT+CMGD= <index> [,<delflag>]	Execution command deletes from memory **<memr>** the message(s). Parameter: **<index>** - message index in the selected storage **<memr>** that can have values form 1 to N, where N depends on the available space (see **+CPMS**) **<delflag>** - an integer indicating multiple message deletion request. 0 (or omitted) - delete message specified in **<index>** 1 - delete all read messages from **<memr>** storage, leaving unread messages and stored mobile originated messages (whether sent or not) untouched 2 - delete all read messages from **<memr>** storage and sent mobile originated messages, leaving unread messages and unsent mobile originated messages untouched 3 - delete all read messages from **<memr>** storage, sent and unsent mobile originated messages, leaving unread messages untouched 4 - delete all messages from **<memr>** storage. Note: if **<delflag>** is present and not set to 0 then **<index>** is ignored and ME shall follow the rules for **<delflag>** shown above. Note: if the location to be deleted is empty, an error message is reported.
AT+CMGD=?	Test command shows the valid memory locations and optionally the supported values of **<delflag>**. **+CMGD: (list of supported <index>s)[,(list of supported <delflag>s)]**
Example	AT+CMGD=? +CMGD: (1,2,3,6,7,17,18,19,20,37,38,39,47),(0-4) OK
Reference	GSM 27.005

+CMGD - Delete Message		SELINT 2
*Note: the behaviour of command **+CMGD** differs depending on whether or not the improved SMS commands operation mode has been enabled (see **#SMSMODE**).*		
(#SMSMODE=0)		
# S M S M O D E = 0	**AT+CMGD= <index> [,<delflag>]**	Execution command deletes from memory **<memr>** the message(s). Parameter: **<index>** - message index in the selected storage **<memr>** that can have values form 1 to N, where N depends on the available space (see **+CPMS**) **<delflag>** - an integer indicating multiple message deletion request. 0 (or omitted) - delete message specified in **<index>** 1 - delete all read messages from **<memr>** storage, leaving unread messages and stored mobile originated messages (whether sent or not) untouched

+CMGD - Delete Message		SELINT 2
#SMSMODE=0		2 - delete all read messages from **<memr>** storage and sent mobile originated messages, leaving unread messages and unsent mobile originated messages untouched 3 - delete all read messages from **<memr>** storage, sent and unsent mobile originated messages, leaving unread messages untouched 4 - delete all messages from **<memr>** storage. Note: if **<delflag>** is present and not set to 0 then, if <index> is greater than 0, **<index>** is ignored and ME shall follow the rules for **<delflag>** shown above. Note: if the location to be deleted is empty, an error message is reported.
	AT+CMGD=?	Test command shows the valid memory locations and optionally the supported values of **<delflag>**. **+CMGD: (supported <index>s list)[,(supported <delflag>s list)]**

3.5.5.4.5. Select service for MO SMS messages - +CGSMS

+CGSMS – Select service for MO SMS messages		SELINT 2
AT+CGSMS= [<service>]	The set command is used to specify the service or service preference that the MT will use to send MO SMS messages. **<service>:** a numeric parameter which indicates the service or service preference to be used 0 - GPRS 1 - circuit switched (default) 2 - GPRS preferred (use circuit switched if SMS via GPRS service not available or GPRS not registered) 3 - circuit switched preferred (use GPRS if SMS via GSM service not available or GSM not registered) Note: the <service> value is saved on NVM as global parameter	
AT+CGSMS?	The read command returns the currently selected service or service preference in the form: **+CGSMS: <service>**	
AT+CGSMS=?	Test command reports the supported list of currently available <service>s.	

3.5.6. FAX Class 1 AT Commands

3.5.6.1. General Configuration

3.5.6.1.1. Manufacturer ID - +FMI

+FMI - Manufacturer ID	**SELINT 0**
AT+FMI?	Read command reports the manufacturer ID. The output depends on the choice made through **#SELINT** command.
Example	AT+FMI? Telit_Mobile_Terminals OK
Reference	ITU T.31 and TIA/EIA-578-A specifications

+FMI - Manufacturer ID	**SELINT 1 / 2**
AT+FMI?	Read command reports the manufacturer ID. The output depends on the choice made through **#SELINT** command.
Example	AT+FMI? Telit OK
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.1.2. Model ID - +FMM

+FMM - Model ID	**SELINT 0 / 1 / 2**
AT+FMM?	Read command reports the model ID
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.1.3. Revision ID - +FMR

+FMR - Revision ID	**SELINT 0 / 1 / 2**
AT+FMR?	Read command reports the software revision ID
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2. Transmission/Reception Control

3.5.6.2.1. Stop Transmission And Pause - +FTS

+FTS - Stop Transmission And Pause	**SELINT 0 / 1 / 2**
AT+FTS=<time>	Execution command causes the modem to terminate a transmission and wait for **<time>** 10ms intervals before responding with **OK** result. Parameter: **<time>** - duration of the pause, expressed in 10ms intervals. 0..255
AT+FTS=?	Test command returns all supported values of the parameter **<time>**. Note: test command result is without command echo
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.2. Wait For Receive Silence - +FRS

+FRS - Wait For Receive Silence	**SELINT 0 / 1 / 2**
AT+FRS=<time>	Execution command causes the modem to listen and report **OK** when silence has been detected for the specified period of time. This command will terminate when the required silence period is detected or when the **DTE** sends another character other than **XON** or **XOFF**. Parameter: **<time>** - amount of time, expressed in 10ms intervals. ..0..255
AT+FRS=?	Test command returns all supported values of the parameter **<time>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.3. Transmit Data Modulation - +FTM

+FTM - Transmit Data Modulation	**SELINT 0 / 1**
AT+FTM=<mod>	Execution command causes the module to transmit facsimile data using the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps
AT+FTM=?	Test command returns all supported values of the parameter **<mod>**.

+FTM - Transmit Data Modulation	SELINT 0 / 1
	Note: the output is not bracketed and without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

+FTM - Transmit Data	SELINT 2
AT+FTM=<mod>	Execution command causes the module to transmit facsimile data using the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps
AT+FTM=?	Test command returns all supported values of the parameter **<mod>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.4. Receive Data Modulation - +FRM

+FRM - Receive Data Modulation	SELINT 0 / 1
AT+FRM=<mod>	Execution command causes the module to receive facsimile data using the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps
AT+FRM=?	Test command returns all supported values of the parameter **<mod>**. Note: the output is not bracketed and without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

+FRM - Receive Data Modulation	SELINT 2
AT+FRM=<mod>	Execution command causes the module to receive facsimile data using the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps

+FRM - Receive Data Modulation	SELINT 2
AT+FRM=?	Test command returns all supported values of the parameter **<mod>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.5. Transmit Data With HDLC Framing - +FTH

+FTH - Transmit Data With HDLC Framing	SELINT 0 / 1 / 2
AT+FTH=<mod>	Execution command causes the module to transmit facsimile data using HDLC protocol and the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 3 - V21/300 bps
AT+FTH=?	Test command returns all supported values of the parameter **<mod>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.6. Receive Data With HDLC Framing - +FRH

+FRH - Receive Data With HDLC Framing	SELINT 0 / 1 / 2
AT+FRH=<mod>	Execution command causes the module to receive facsimile data using HDLC protocol and the modulation defined by the parameter **<mod>**. Parameter: **<mod>** - carrier modulation 3 - V21/300 bps
AT+FRH=?	Test command returns all supported values of the parameter **<mod>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.3. Serial Port Control

3.5.6.3.1. Select Flow Control - +FLO

+FLO - Select Flow Control Specified By Type	SELINT 0 / 1 / 2
AT+FLO=<type>	Set command selects the flow control behaviour of the serial port in both directions: from **DTE** to **DTA** and from **DTA** to **DTE**. Parameter: **<type>** - flow control option for the data on the serial port 0 - flow control None 1 - flow control Software (**XON-XOFF**)

+FLO - Select Flow Control Specified By Type	SELINT 0 / 1 / 2
	2 - flow control Hardware (**CTS-RTS**) – (factory default) Note: This command is a shortcut of the **+IFC** command. Note: **+FLO's** settings are functionally a subset of **&K's** ones.
AT+FLO?	Read command returns the current value of parameter **<type>** Note: If flow control behavior has been set with **AT&Kn** command with the parameter that is not allowed by **AT+FLO** the read command **AT+FLO?** will return: **+FLO: 0**
AT+FLO=?	Test command returns all supported values of the parameter **<type>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.3.2. Serial Port Rate - +FPR

+FPR - Select Serial Port Rate	SELINT 0 / 1 / 2
AT+FPR=<rate>	Set command selects the the serial port speed in both directions, from **DTE** to **DTA** and from **DTA** to **DTE**. When autobauding is selected, then the speed is detected automatically. Parameter: **<rate>** - serial port speed selection 0 – autobauding Note: it has no effect and is included only for backward compatibility with landline modems
AT+FPR?	Read command returns the current value of parameter **<rate>**
AT+FPR=?	Test command returns all supported values of the parameters **<rate>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.3.3. Double Escape Character Replacement - +FDD

+FDD - Double Escape Character Replacement Control	SELINT 0 / 1 / 2
AT+FDD=<mode>	Set command concerns the use of the **<DLE><SUB>** pair to encode consecutive escape characters (**<10h><10h>**) in user data. Parameter **<mode>** 0 - currently the only available value. The **DCE** decode of **<DLE><SUB>** is either **<DLE><DLE>** or discard. The **DCE** encode of **<10h><10h>** is

+FDD - Double Escape Character Replacement Control	SELINT 0 / 1 / 2
	<DLE><DLE><DLE><DLE>
AT+FDD?	Read command returns the current value of parameter **<mode>**
AT+FDD=?	Test command returns all supported values of parameter **<mode>**. Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.7. Custom AT Commands

3.5.7.1. General Configuration AT Commands

3.5.7.1.1. Network Selection Menu Availability - +PACSP

+PACSP - Network Selection Menu Availability	SELINT 2
AT+PACSP?	Read command returns the current value of the **<mode>** parameter in the format: **+PACSP<mode>** where: **<mode>** - PLMN mode bit (in CSP file on the SIM) 0 - restriction of menu option for manual PLMN selection. 1 - no restriction of menu option for Manual PLMN selection.
AT+PACSP=?	Test command returns the **OK** result code.
Note	For all SW versions except 13.00.xxx, the command is available only if the ENS functionality has been previously enabled (see **#ENS**). For 13.00.xxx SW version the command is always available, irrespective of ENS functionality setting.

3.5.7.1.2. Manufacturer Identification - #CGMI

#CGMI - Manufacturer Identification	SELINT 0 / 1
AT#CGMI	Execution command returns the device manufacturer identification code with command echo. The output depends on the choice made through **#SELINT** command.
AT#CGMI?	Read command has the same effect as the Execution command

#CGMI - Manufacturer Identification	SELINT 2
AT#CGMI	Execution command returns the device manufacturer identification code with command echo. The output depends on the choice made through **#SELINT** command.
AT#CGMI=?	Test command returns the **OK** result code.

3.5.7.1.3. Model Identification - #CGMM

#CGMM - Model Identification	SELINT 0 / 1
AT#CGMM	Execution command returns the device model identification code with command echo.
AT#CGMM?	Read command has the same effect as the Execution command

#CGMM - Model Identification	SELINT 2
AT#CGMM	Execution command returns the device model identification code with command echo.

#CGMM - Model Identification		SELINT 2
AT#CGMM=?	Test command returns the **OK** result code.	

3.5.7.1.4. Revision Identification - #CGMR

#CGMR - Revision Identification		SELINT 0 / 1
AT#CGMR	Execution command returns device software revision number with command echo.	
AT#CGMR?	Read command has the same effect as the Execution command	

#CGMR - Revision Identification		SELINT 2
AT#CGMR	Execution command returns device software revision number with command echo.	
AT#CGMR=?	Test command returns the **OK** result code.	

3.5.7.1.5. Product Serial Number Identification - #CGSN

#CGSN - Product Serial Number Identification		SELINT 0 / 1
AT#CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, with command echo.	
AT#CGSN?	Read command has the same effect as the Execution command	

#CGSN - Product Serial Number Identification		SELINT 2
AT#CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, with command echo.	
AT#CGSN=?	Test command returns the **OK** result code.	

3.5.7.1.6. International Mobile Subscriber Identity (IMSI) - #CIMI

#CIMI - International Mobile Subscriber Identity (IMSI)		SELINT 0 / 1
AT#CIMI	Execution command returns the international mobile subscriber identity, identified as the IMSI number, with command echo.	
AT#CIMI?	Read command has the same effect as the Execution command	

#CIMI - International Mobile Subscriber Identity (IMSI)		SELINT 2
AT#CIMI	Execution command returns the international mobile subscriber identity, identified as the IMSI number, with command echo.	
AT#CIMI=?	Test command returns the **OK** result code.	

3.5.7.1.7. Read ICCID (Integrated Circuit Card Identification) - #CCID

#CCID - Read ICCID		SELINT 2
AT#CCID	Execution command reads on SIM the ICCID (card identification number that provides a unique identification number for the SIM)	
AT#CCID=?	Test command returns the **OK** result code.	

3.5.7.1.8. Service Provider Name - #SPN

#SPN - Service Provider Name	SELINT 2
AT#SPN	Execution command returns the service provider string contained in the SIM field **SPN**, in the format: **#SPN: <spn>** where: **<spn>** - service provider string contained in the SIM field **SPN**, represented in the currently selected character set (see **+CSCS**). Note: if the SIM field SPN is empty, the command returns just the **OK** result code. Note: if the SIM field SPN is not available in the SIM card, the command returns just the **ERROR** result code.
AT#SPN=?	Test command returns the **OK** result code.

3.5.7.1.9. Extended Numeric Error report - #CEER

#CEER – Extended numeric error report	SELINT 2
AT#CEER	Execution command causes the TA to return a numeric code in the format **#CEER: <code>** which should offer the user of the TA a report of the reason for • the failure in the last unsuccessful call setup (originating or answering); • the last call release; • the last unsuccessful GPRS attach or unsuccessful PDP context activation; • the last GPRS detach or PDP context deactivation. Note: if none of the previous conditions has occurred since power up then **0** is reported (i.e. **No error**, see below) **<code>** values as follows

Value	Diagnostic
0	No error
1	Unassigned (unallocated) number
3	No route to destination
6	Channel unacceptable
8	Operator determined barring
16	Normal call clearing
17	User busy
18	No user responding
19	User alerting, no answer
21	Call rejected

#CEER – Extended numeric error report		SELINT 2
	22	Number changed
	26	Non selected user clearing
	27	Destination out of order
	28	Invalid number format (incomplete number)
	29	Facility rejected
	30	Response to STATUS ENQUIRY
	31	Normal, unspecified
	34	No circuit/channel available
	38	Network out of order
	41	Temporary failure
	42	Switching equipment congestion
	43	Access information discarded
	44	Requested circuit/channel not available
	47	Resources unavailable, unspecified
	49	Quality of service unavailable
	50	Requested facility not subscribed
	55	Incoming calls barred with in the CUG
	57	Bearer capability not authorized
	58	Bearer capability not presently available
	63	Service or option not available, unspecified
	65	Bearer service not implemented
	68	ACM equal to or greater than ACMmax
	69	Requested facility not implemented
	70	Only restricted digital information bearer capability is available
	79	Service or option not implemented, unspecified
	81	Invalid transaction identifier value
	87	User not member of CUG
	88	Incompatible destination
	91	Invalid transit network selection
	95	Semantically incorrect message
	96	Invalid mandatory information
	97	Message type non-existent or not implemented
	98	Message type not compatible with protocol state
	99	Information element non-existent or not implemented
	100	Conditional IE error
	101	Message not compatible with protocol state
	102	Recovery on timer expiry
	111	Protocol error, unspecified
	127	Interworking, unspecified
	GPRS related errors	
	224	MS requested detach
	225	NWK requested detach
	226	Unsuccessful attach cause NO SERVICE
	227	Unsuccessful attach cause NO ACCESS

#CEER – Extended numeric error report			SELINT 2
	228	Unsuccessful attach cause GPRS SERVICE REFUSED	
	229	PDP deactivation requested by NWK	
	230	PDP deactivation cause LLC link activation Failed	
	231	PDP deactivation cause NWK reactivation with same TI	
	232	PDP deactivation cause GMM abort	
	233	PDP deactivation cause LLC or SNDCP failure	
	234	PDP unsuccessful activation cause GMM error	
	235	PDP unsuccessful activation cause NWK reject	
	236	PDP unsuccessful activation cause NO NSAPI available	
	237	PDP unsuccessful activation cause SM refuse	
	238	PDP unsuccessful activation cause MMI ignore	
	239	PDP unsuccessful activation cause Nb Max Session Reach	
	256	PDP unsuccessful activation cause wrong APN	
	257	PDP unsuccessful activation cause unknown PDP address or type	
	258	PDP unsuccessful activation cause service not supported	
	259	PDP unsuccessful activation cause QOS not accepted	
	260	PDP unsuccessful activation cause socket error	
	Other custom values		
	240	FDN is active and number is not in FDN	
	241	Call operation not allowed	
	252	Call barring on outgoing calls	
	253	Call barring on incoming calls	
	254	Call impossible	
	255	Lower layer failure	
AT#CEER=?	Test command returns **OK** result code.		
Reference	GSM 04.08		

3.5.7.1.10. Extended error report for Network Reject cause - #CEERNET

#CEERNET – Ext error report for Network reject cause		SELINT 2
AT#CEERNET	Execution command causes the TA to return a numeric code in the format **#CEERNET: <code>** which should offer the user of the TA a report for the last mobility management(MM) or session management(SM) procedure not accepted by the network and a report of detach or deactivation causes from network. **<code>** values as follows	

Value	Diagnostic
2	IMSI UNKNOWN IN HLR
3	ILLEGAL MS
4	IMSI UNKNOWN IN VISITOR LR

#CEERNET – Ext error report for Network reject cause	SELINT 2

5	IMEI NOT ACCEPTED
6	ILLEGAL ME
7	GPRS NOT ALLOWED
8	GPRS AND NON GPRS NOT ALLOWED
9	MS IDENTITY CANNOT BE DERIVED BY NETWORK
10	IMPLICITLY DETACHED
11	PLMN NOT ALLOWED
12	LA NOT ALLOWED
13	ROAMING NOT ALLOWED
14	GPRS NOT ALLOWED IN THIS PLMN
15	NO SUITABLE CELLS IN LA
16	MSC TEMP NOT REACHABLE
17	NETWORK FAILURE
22	CONGESTION
25	LLC OR SNDCP FAILURE
26	INSUFFICIENT RESOURCES
27	MISSING OR UNKNOWN APN
28	UNKNOWN PDP ADDRESS OR PDP TYPE
29	USER AUTHENTICATION FAILED
30	ACTIVATION REJECTED BY GGSN
31	ACTIVATION REJECTED UNSPECIFIED
32	SERVICE OPTION NOT SUPPORTED
33	REQ. SERVICE OPTION NOT SUBSCRIBED
34	SERV.OPTION TEMPORARILY OUT OF ORDER
35	NSAPI ALREADY USED
36	REGULAR DEACTIVATION
37	QOS NOT ACCEPTED
38	SMN NETWORK FAILURE
39	REACTIVATION REQUIRED
40	FEATURE NOT SUPPORTED
41	SEM ERROR IN TPF
42	SYNT ERROR IN TPF
43	UNKNOWN PDP CNTXT
44	SEM ERR IN PKT FILTER
45	SYNT ERR IN PKT FILTER
46	PDP CNTXT WITHOUT TPF ACT
48	RETRY ON NEW CELL ENTRY
81	INVALID TRANSACTION IDENTIFIER
95	SEMANTICALLY INCORRECT MESSAGE
96	INVALID MANDATORY INFORMATION
97	MSG TYPE NON EXISTENT OR NOT IMPLEMENTED
98	MSG TYPE NOT COMPATIBLE WITH PROTOCOL STATE
99	IE NON_EXISTENT OR NOT IMPLEMENTED
100	CONDITIONAL IE ERROR
101	MSG NOT COMPATIBLE WITH PROTOCOL STATE
111	PROTOCOL ERROR UNSPECIFIED

Notes:
Codes from 2 to 8 are hard MM/GMM reject causes. According with 3GPP, when these causes are used by the MNO the SIM shall be considered as invalid for non-GPRS services and/or GPRS services until switching off or the SIM is removed.
Causes 15, 41 to 46 are not considered for R98 products(GSM 04.08).

#CEERNET – Ext error report for Network reject cause		SELINT 2
AT#CEERNET=?	Test command returns **OK** result code.	
Reference	GSM 24.008 for REL4 and GSM 04.08 for R98	

3.5.7.1.11. Select Registration Operation Mode - #REGMODE

#REGMODE – Select Registration Operation Mode		SELINT 2
AT#REGMODE=<mode>	There are situations in which the presentation of the **URCs** controlled by either **+CREG** and **+CGREG** are slightly different from ETSI specifications. We identified this behaviour and decided to maintain it as default for backward compatibility issues, while we're offering a more formal '**Enhanced Operation Mode**' through **#REGMODE**. Set command sets the operation mode of registration status commands. Parameter: **<mode>** - operation mode of registration status commands 0 - basic operation mode (default for all products, except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - enhanced operation mode (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS)	
AT#REGMODE?	Read command returns the current registration operation mode.	
AT#REGMODE=?	Test command reports the available range of values for parameter <**mode**>	
Note	The affected commands are **+CREG** and **+CGREG**	

3.5.7.1.12. SMS Commands Operation Mode - #SMSMODE

#SMSMODE - SMS Commands Operation Mode		SELINT 2
AT#SMSMODE=<mode>	Set command enables/disables the improved SMS commands operation mode Parameter: **<mode>** - SMS commands operation mode 0 - disable improved SMS commands operation mode (default for all products, except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - enable improved SMS commands operation mode (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 2 –when FDN are enabled, check for presence of SMS service centre address in the	

#SMSMODE - SMS Commands Operation Mode	SELINT 2
	FDN phonebook; if not present, SMS cannot be sent
AT#SMSMODE?	Read command reports whether the improved SMS commands operation mode is enabled or not, in the format: **#SMSMODE: <mode>** (**<mode>** described above)
AT#SMSMODE=?	Test command reports the supported range of values for parameter <**mode**>
Note	The SMS commands affected by **#SMSMODE** are: **+CPMS**, **+CNMI**, **+CMGS**, **+CMGW**, **+CMGL**, **+CMGR**, **+CMGD**, **+CSMP**

3.5.7.1.13. PLMN List Selection - #PLMNMODE

#PLMNMODE - PLMN List Selection	SELINT 0 / 1
AT#PLMNMODE= [<plmnlist>]	Set command selects the list of PLMN names to be used currently Parameter: **<plmnlist>** - list of PLMN names 0 - PLMN names list, currently used in commands like **+COPS** or **#MONI**, is fixed and depends upon currently selected interface (see **#SELINT**) (default for all products, except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - PLMN names list is not fixed and can be updated in newer software versions (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) Note: <**plmnlist**> parameter is saved in NVM
AT#PLMNMODE?	Read command reports whether the currently used list of PLMN names is fixed or not, in the format: **#PLMNMODE: <plmnlist>** (**<plmnlist>** described above)
AT#PLMNMODE=?	Test command returns the supported range of values for parameter **<plmnlist>**.

#PLMNMODE – PLMN List Selection	SELINT 2
AT#PLMNMODE= [<plmnlist>]	Set command selects the list of PLMN names to be used currently Parameter: **<plmnlist>** - list of PLMN names 0 - PLMN names list, currently used in commands like **+COPS** or **#MONI**, is fixed and depends upon currently selected interface (see **#SELINT**) (default for all products, except GE865-QUAD, GE864-

	DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD V3 and GE910-GNSS) 1 - PLMN names list is not fixed and can be updated in newer software versions (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD V3 and GE910-GNSS) 2 – PLMN names list is the same of 1, but updated with **#PLMNUPDATE** command. Note: **<plmnlist>** parameter is saved in NVM
AT#PLMNMODE?	Read command reports whether the currently used list of PLMN names is fixed or not, in the format: **#PLMNMODE: <plmnlist>** (**<plmnlist>** described above)
AT#PLMNMODE=?	Test command returns the supported range of values for parameter **<plmnlist>**.

3.5.7.1.14. Update PLMN List - #PLMNUPDATE

#PLMNUPDATE – Update PLMN List	**SELINT 2**
AT#PLMNUPDATE=[<action>,<MCC>,<MNC>[,<PLMNname>]]	Set command adds a new entry or updates an existing entry of the module PLMN list. Parameter: **<action>** - command action 0 - remove the entry with selected <MCC> and <MNC>. Parameter <PLMNname> will be ignored 1 - update the entry with selected <MCC> and <MNC> if it is already present, otherwise add it. 2 – remove all entries. Parameters <MCC> and <MNC> are not used in this case. **<MCC>** - Mobile Country Code. String value, length 3 digits. **<MNC>** - Mobile Network Code. String value, min length 2 digits, max length 3 digits. **<PLMNname>** - Name of the PLMN; string value, max length 30 characters. NOTE: the entries will be saved in NVM. NOTE: this command supports up to 30 entries.

	NOTE: entries added or updated with **#PLMNUPDATE** are effective only if **#PLMNMODE** is set to 2.
AT#PLMNUPDATE?	Read command returns the list of entries added or updated with set command, in the format: **#PLMNUPDATE**: **<MCC>,<MNC>,<PLMNname>** **#PLMNUPDATE**: **<MCC>,<MNC>,<PLMNname>** **…** **OK** NOTE: the entries are in increasing order by MCC and MNC
AT#PLMNUPDATE=?	Test command returns the supported range of parameters **<action>,** and the maximum length of **<MCC>, <MNC>** and **<PLMNname>** parameters in the format: **#PLMNUPDATE: (list of supported <action>s),<c_length>,<n_length>,<p_length>** where: **<c_length>** - integer type value indicating the maximum length of parameter **<MCC>**. **<n_length>** - integer type value indicating the maximum length of parameter **<MNC>**. **<p_length>** - integer type value indicating the maximum length of parameter **<PLMNname>**

3.5.7.1.15. Forbidden PLMN deletion - #FPLMN

#FPLMN – Forbidden PLMN deletion	**SELINT 2**
AT#FPLMN= <enable>[,<period>]	Set command enables/disables the periodic deletion of forbidden PLMN list file in SIM. Parameter: **<enable>** 0 - disables periodic deletion 1 – enables periodic deletion 2 – one shot deletion (deletes forbidden PLMN list) 3 – list contents of forbidden PLMN list file **<period>** - interval in minutes between forbidden PLMN list deletions (default 60)
AT#FPLMN?	Read command reports whether the periodic deletion is currently enabled or not, and the deletion period, in the format: **#FPLMN: <enable>,<period>**

#FPLMN – Forbidden PLMN deletion		SELINT 2
AT#FPLMN=?	Test command reports available values for parameters <**enable**> and <**period**>.	

3.5.7.1.16. Display PIN Counter - #PCT

#PCT - Display PIN Counter	SELINT 0 / 1
AT#PCT	Execution command reports the PIN/PUK or PIN2/PUK2 input remaining attempts, depending on **+CPIN** requested password in the format: **#PCT: <n>** where: <**n**> - remaining attempts 0 - the SIM is blocked. 1..3 - if the device is waiting either SIM PIN or SIM PIN2 to be given. 1..10 - if the device is waiting either SIM PUK or SIM PUK2 to be given.
AT#PCT?	Read command has the same behaviour as Execution command.

#PCT - Display PIN Counter	SELINT 2
AT#PCT	Execution command reports the PIN/PUK or PIN2/PUK2 input remaining attempts, depending on **+CPIN** requested password in the format: **#PCT: <n>** where: <**n**> - remaining attempts 0 - the SIM is blocked. 1..3 - if the device is waiting either SIM PIN or SIM PIN2 to be given. 1..10 - if the device is waiting either SIM PUK or SIM PUK2 to be given.
AT#PCT=?	Test command returns the OK result code.

3.5.7.1.17. Software Shut Down - #SHDN

#SHDN - Software Shutdown	SELINT 0 / 1
AT#SHDN	Execution command causes device detach from the network and shut down. Before definitive shut down an **OK** response is returned. Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command. Note: to turn it on again Hardware pin ON/OFF must be tied **low**.
AT#SHDN?	Read command has the same behaviour as Execution command.

#SHDN - Software Shutdown	SELINT 2
AT#SHDN	Execution command causes device detach from the network and shut down. Before definitive shut down an **OK** response is returned.

#SHDN - Software Shutdown	SELINT 2
	Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command. Note: to turn it on again Hardware pin ON/OFF must be tied **low**.
AT#SHDN=?	Test command returns the OK result code.

3.5.7.1.18. Extended Reset - #Z

#Z – Extended reset	SELINT 2
AT#Z=<profile>	Set command loads both base section and extended section of the specified user profile stored with AT&W and selected with AT&P. Parameter **<profile>** 0 – user profile 0 1 – user profile 1
AT#Z=?	Test command tests for command existence.

3.5.7.1.19. Periodic Reset - #ENHRST

#ENHRST – Periodic ReSeT	SELINT 2
AT#ENHRST=<mod>,<delay>	Set command enables/disables the unit reset after **<delay>** minutes. Parameters: **<mod>** 0 – disables the unit reset (factory default) 1 – enables the unit reset only for one time 2 – enables the periodic unit reset **<delay>** - time interval after that the unit reboots; numeric value in minutes Note: the settings are saved automatically in NVM only if old or new mod is 2. Any change from 0 to 1 or from 1 to 0 is not stored in NVM Note: the particular case AT#ENHRST=1,0 causes the immediate module reboot. In this case if AT#ENHRST=1,0 follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#ENHRST=1,0, to permit the complete NVM storing.
AT#ENHRST?	Read command reports the current parameter settings for **# EHNRST** command in the format: **# EHNRST: < mod >[,<delay>,<remainTime>]**

#ENHRST – Periodic ReSeT	SELINT 2
	<remainTime> - time remaining before next reset
AT#ENHRST=?	Test command reports supported range of values for parameters **<mod>** and **<delay>**.
Examples	AT#ENHRST=1,60 …. Module reboots after 60 minutes … AT#ENHRST=1,0 …. Module reboots now … AT#ENHRST=2,60 …. Module reboots after 60 minutes and indefinitely after every following power on …

3.5.7.1.20. Fast shutdown configuration - #FASTSHDN

#FASTSHDN – Fast shutdown configuration	SELINT 2
AT#FASTSHDN[= <Enable>[,<Gpio>[, <spare>[,<spare>[,<spare>[,<spare>]]]]]	Set the GPIO fast shutdown configuration. Parameters: **<Enable>** It is used to enable or disable the fast shutdown execution via GPIO: **0** - The fast shutdown execution via GPIO is disabled (default) **1** - The fast shutdown execution via GPIO is enabled This parameter is stored in NVM. **<Gpio>** It sets which Gpio execute the fast shdn. When the GPIO number configured with **<Gpio>** **goes from the High level to the low level and the <Enable>** is set to 1, the module execute immediately the fast shutdown. This parameter is stored in NVM. The format **AT#FASTSHDN** forces the module to execute immediately the fast shutdown. Note: it is necessary that the Gpio set whit **<Gpio>** is used for the fast shutdown purpose only. If you want to use the Gpio set via **AT#FASTSHDN** you have to disable the fastshutdown purpose for that pin:

	AT#FASTSHDN=0,<**Gpio**> Note: fast shut down doesn't perform network deregistration procedure.
AT#FASTSHDN?	Read command reports the currently selected configuration in the format: **AT#FASTSHDN: <Enable>,<Gpio>,0,0,0,0**
AT#FASTSHDN=?	Test command returns the supported range of values for all the parameters.

Example	//enable fast shutdown on GPIO 5
	AT#FASTSHDN=1,5
	OK
	
	AT#FASTSHDN?
	$GPSGPIO: 1,5,0,0,0,0
	
	OK
	
	//force immediate fast shutdown
	AT#FASTSHDN
	OK

3.5.7.1.21. Wake From Alarm Mode - #WAKE

#WAKE - Wake From Alarm Mode	**SELINT 0 / 1**
AT#WAKE[=<opmode>]	Execution command stops any eventually present alarm activity and, if the module is in **alarm mode**, it exits the **alarm mode** and enters the **normal operating mode**. Parameter: **<opmode>** - operating mode; any input is possible: no control is made on the **<opmode>** value, although it is mandatory to have it; the module exits the **alarm mode**, enters the **normal operating mode**, any alarm activity is stopped (e.g. alarm tone playing) and an **OK** result code is returned. Note: if parameter is omitted, the command returns the **operating status** of the device in the format: **#WAKE: <status>** where: **<status>** 0 - normal operating mode 1 - alarm mode or normal operating mode with some alarm activity. Note: the **alarm mode** is indicated by status **ON** of hardware pin **CTS** and by status **ON** of pin **DSR**, the **power saving** status is indicated by a **CTS - OFF** and **DSR -**

#WAKE - Wake From Alarm Mode	SELINT 0 / 1
	OFF status; the **normal operating status** is indicated by **DSR - ON**. Note: during the **alarm mode** the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SM, the only commands that can be issued to the MODULE in this state are the **#WAKE** and **#SHDN**, every other command must not be issued during this state. Note: if **#WAKE=0** command is issued after an alarm has been set with **+CALA** command, but before the alarm has expired, it will answer **OK** but have no effect.
AT#WAKE?	Read command has the same effect as Execution command when parameter is omitted.
AT#WAKE=?	Test command returns **OK** result code.

#WAKE - Wake From Alarm Mode	SELINT 2
AT#WAKE=[<opmode>]	Execution command stops any eventually present alarm activity and, if the module is in **alarm mode**, it exits the **alarm mode** and enters the **normal operating mode**. Parameter: **<opmode>** - operating mode 0 - normal operating mode; the module exits the **alarm mode**, enters the **normal operating mode**, any alarm activity is stopped (e.g. alarm tone playing) and an **OK** result code is returned. Note: the **alarm mode** is indicated by status **ON** of hardware pin **CTS** and by status **ON** of pin **DSR**; the **power saving** status is indicated by a **CTS - OFF** and **DSR - OFF** status; the **normal operating status** is indicated by **DSR - ON**. Note: during the **alarm mode** the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SM, the only commands that can be issued to the MODULE in this state are the **#WAKE** and **#SHDN**, every other command must not be issued during this state. Note: if **#WAKE=0** command is issued after an alarm has been set with **+CALA** command, but before the alarm has expired, it will answer **OK** but have no effect.
AT#WAKE?	Read command returns the **operating status** of the device in the format: **#WAKE: <status>** where: **<status>** 0 - normal operating mode 1 - alarm mode or normal operating mode with some alarm activity.
AT#WAKE=?	Test command returns **OK** result code.

3.5.7.1.22. Query Temperature Overflow - #QTEMP

#QTEMP - Query Temperature Overflow	SELINT 0 / 1
AT#QTEMP [=<mode>]	Set command has currently no effect. The interpretation of parameter **<mode>** is currently not implemented. Note: if parameter **<mode>** is omitted the behaviour of Set command is the same as Read command Note: Only **<mode>=0** is accepted.
AT#QTEMP?	Read command queries the device internal temperature sensor for over temperature and reports the result in the format: **#QTEMP: <temp>** where **<temp>** - over temperature indicator 0 - the device temperature is in the *working range* 1 - the device temperature is out of the *working range* Note: typical *temperature working range* is (-10°C..+55°C); anyway you are strongly recommended to consult the "Hardware User Guide" to verify the real temperature working range of your module
#QTEMP=?	Test command reports supported range of values for parameter **<mode>**.
Note	The device should not be operated out of its *temperature working range*; if temperature is out of range proper functioning of the device is not ensured.

#QTEMP - Query Temperature Overflow	SELINT 2
AT#QTEMP= [<mode>]	Set command has currently no effect. The interpretation of parameter **<mode>** is currently not implemented: any value assigned to it will simply have no effect.
AT#QTEMP?	Read command queries the device internal temperature sensor for over temperature and reports the result in the format: **#QTEMP: <temp>** where **<temp>** - over temperature indicator 0 - the device temperature is in the *working range* 1 - the device temperature is out of the *working range* Note: typical *temperature working range* is (-10°C..+55°C); anyway you are strongly recommended to consult the "Hardware User Guide" to verify the real temperature working range of your module
#QTEMP=?	Test command reports supported range of values for parameter **<mode>**.
Note	The device should not be operated out of its *temperature working range*, elsewhere proper functioning of the device is not ensured.

3.5.7.1.23. Temperature Monitor - #TEMPMON

#TEMPMON - Temperature Monitor	**SELINT 2**
AT#TEMPMON= **<mod>** **[,<urcmode>** **[,<action>** **[,<hyst_time>** **[,<GPIO>]]]]**	Set command sets the behaviour of the module internal temperature monitor. Parameters: **<mod>** 0 - sets the command parameters. 1 - triggers the measurement of the module internal temperature, reporting the result in the format: **#TEMPMEAS: <level>,<value>** where: **<level>** - threshold level -2 - extreme temperature lower bound (see Note) -1 - operating temperature lower bound (see Note) 0 - normal temperature 1 - operating temperature upper bound (see Note) 2 - extreme temperature upper bound (see Note) **<value>** - actual temperature expressed in Celsius degrees. ***Setting of the following optional parameters has meaning only if <mod>=0*** **<urcmode>** - URC presentation mode. 0 - it disables the presentation of the temperature monitor URC 1 - it enables the presentation of the temperature monitor URC, whenever the module internal temperature reaches either operating or extreme levels; the unsolicited message is in the format: **#TEMPMEAS: <level>,<value>** where: **<level>** and **<value>** are as before **<action>** - sum of integers, each representing an action to be done whenever the module internal temperature reaches either operating or extreme levels (default is 0). If **<action>** is not zero, it is mandatory to set the **<hyst_time>** parameter too. 0..7 - as a sum of: 0 - no action 1 - automatic shut-down when the temperature is beyond the extreme bounds 2 - RF TX circuits automatically disabled (using **+CFUN=2**) when operating temperature bounds are reached. When the temperature is back to normal the module is brought back to the previous state, before RF

	TX disabled. 4 - the output pin **<GPIO>** is tied HIGH when operating temperature bounds are reached; when the temperature is back to normal the output pin **<GPIO>** is tied LOW. If this **<action>** is required, it is mandatory to set the **<GPIO>** parameter too. **<hyst_time>** - hysteresis time: all the actions happen only if the extreme or operating bounds are maintained at least for this period. This parameter is needed and required if **<action>** is not zero. 0..255 - time in seconds **<GPIO>** - GPIO number. valid range is "any output pin" (see "Hardware User's Guide"). This parameter is needed and required only if **<action>=4** is required. Note: the URC presentation mode **<urcmode>** is related to the current AT instance only (see **+cmux**); last **<urcmode>** settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth. Note: last **<action>**, **<hyst_time>** and **<GPIO>** settings are saved in NVM too, but they are not related to the current CMUX instance only (see **+cmux**).
AT#TEMPMON?	Read command reports the current parameter settings for **#TEMPMON** command in the format: **#TEMPMON: <urcmode>,<action>[,<hyst_time>[,<GPIO>]]**
AT#TEMPMON=?	Test command reports the supported range of values for parameters **<mod>**, **<urcmode>**, **<action>**, **<hyst_time>** and **<GPIO>**

Note

In the following table typical temperature bounds are represented for all products except GE864-QUAD AUTOMOTIVE V2 and GE864-QUAD ATEX

Extreme Temperature Lower Bound	-30°C
Operating Temperature Lower Bound	-10°C
Operating Temperature	
Operating Temperature Upper Bound	55°C
Extreme Temperature Upper Bound	80°C

In the following table typical temperature bounds are represented for GE864-QUAD AUTOMOTIVE V2 and GE864-QUAD ATEX products.

Extreme Temperature Lower Bound	-50°C
Operating Temperature Lower Bound	-30°C
Operating Temperature	
Operating Temperature Upper Bound	85°C
Extreme Temperature Upper Bound	120°C

3.5.7.1.24. Temperature monitor configuration - #TEMPCFG

#TEMPCFG – Temperature monitor configuration	**SELINT 2**
AT#TEMPCFG= <TempExLowBound> [,<TempOpLowBound> [,<TempOpUpBound> [,<TempExUpBound>]]]	This parameter command manages the temperature range used by the TEMPMON command Parameters: **<TempExLowBound>** - the extreme temperature lower limit **<TempOpLowBound>** - the operating temperature lower limit **<TempOpUpBound>** - the operating temperature upper limit **<TempExUpBound>** - the extreme temperature upper limit Note 1: The extreme temperature lower limit must not be lower than lower limit (see TEMPMON for temperature limits); Note 2: the operating temperature lower limit must not be lower than the extreme temperature lower limit, nor lower than its minimum admitted value (see TEMPMON for temperature limits); Note 3: the operating temperature upper limit must not be lower than the operating temperature lower limit, nor lower than its minimum admitted value (see TEMPMON for temperature limits); Note 4: the extreme temperature upper limit must not be lower than the operating temperature upper limit Note 5: The extreme temperature upper limit must not be higher than upper limit (see TEMPMON for temperature limits). Note 5: the temperature set are saved in NvM, so at the next reboot the last temperature set is active instead of the factory default values. Note 6: a factory reset restores the factory default values.
AT#TEMPCFG?	read the currently active temperature range : **#TEMPCFG: <TempExLowBound>, <TempOpLowBound>, <TempOpUpBound>, <TempExUpBound>**
AT#TEMPCFG =?	Test command returns the supported range of **<TempExLowBound>, <TempOpLowBound>,**

	<TempOpUpBound>, **<TempExUpBound>** parameters**.**

Example	//test the currently set values
	AT#TEMPCFG?
	#TEMPCFG: -30,-10,55,80
	
	OK
	
	//set a new temperature range
	AT#TEMPCFG=-40,-15,55,85
	OK
	
	//read the currently set values
	AT#TEMPCFG?
	#TEMPCFG: -40,-15,55,85
	
	OK

3.5.7.1.25. Set General Purpose Output - #SGPO

#SGPO - Set General Purpose Output	**SELINT 0 / 1**
AT#SGPO[=[<stat>]]	Set command sets the value of the general purpose output pin **GPIO2**. Parameter: **<stat>** 0 - output pin cleared to 0 (**Low**) 1 - output pin set to 1 (**High**) Note: the **GPIO2** is an OPEN COLLECTOR output, the command sets the transistor base level, hence the open collector output is negated: **AT#SGPO=0** sets the open collector output **High** **AT#SGPO=1** sets the open collector output **Low** A pull up resistor is required on pin **GPIO2**. Note: issuing **AT#SGPO<CR>** is the same as issuing the Read command. Note: issuing **AT#SGPO=<CR>** is the same as issuing the command **AT#SGPO=0<CR>**.
AT#SGPO?	Read command reports the **#SGPO** command setting, hence the opposite status of the open collector pin in the format: **#SGPO: <stat>**.
AT#SGPO=?	Test command reports the supported range of values of parameter **<stat>**.

3.5.7.1.26. General Purpose Input - #GGPI

#GGPI - General Purpose Input	SELINT 0 / 1
AT#GGPI[=[<dir>]]	Set command sets the general purpose input pin **GPIO1**. Parameter: **<dir>** - auxiliary input GPIO1 setting 0 - the Read command **AT#GGPI?** reports the logic input level read from GPIO1 pin. Note: The device has an insulated input pin (the input goes the base of an internal decoupling transistor) which can be used as a logic general purpose input. This command sets the read behaviour for this pin, since only direct read report is supported, the issue of this command is not needed. In future uses the behavior of the read input may be more complex. Note: If parameter is omitted then the behaviour of Set command is the same as Read command
AT#GGPI?	Read command reports the read value for the input pin GPIO1, in the format: **#GGPI: <dir>,<stat>** where **<dir>** - direction setting (see **#GGPI=<dir>**) **<stat>** - logic value read from pin GPIO1 Note: Since the reading is done after the insulating transistor, the reported value is the opposite of the logic status of the GPIO1 input pin.
AT#GGPI=?	Test command reports supported range of values for parameter **<dir>**.

3.5.7.1.27. General Purpose Input/Output Pin Control - #GPIO

#GPIO - General Purpose Input/Output Pin Control	SELINT 0/1
AT#GPIO=[<pin>, <mode>[,<dir>]]	Execution command sets the value of the general purpose output pin **GPIO<pin>** according to **<dir>** and **<mode>** parameter. Not all configurations for the three parameters are valid. Parameters: **<pin>** - GPIO pin number; supported range is from 1 to a value that depends on the hardware. **<mode>** - its meaning depends on **<dir>** setting: 0 - no meaning if **<dir>=0** - INPUT - output pin cleared to 0 (**Low**) if **<dir>=1** - OUTPUT - no meaning if **<dir>=2** - ALTERNATE FUNCTION - no meaning if **<dir>=3** – TRISTATE PULL DOWN 1 - no meaning if **<dir>=0** - INPUT - output pin set to 1 (**High**) if **<dir>=1** - OUTPUT

#GPIO - General Purpose Input/Output Pin Control	SELINT 0/1
	- no meaning if **<dir>=2** - ALTERNATE FUNCTION - no meaning if **<dir>=3** – TRISTATE PULL DOWN 2 - Reports the read value from the input pin if **<dir>=0** - INPUT - Reports the read value from the input pin if **<dir>=1** - OUTPUT - Reports a no meaning value if **<dir>=2** - ALTERNATE FUNCTION - Reports a no meaning if **<dir>=3** – TRISTATE PULL DOWN **<dir>** - GPIO pin direction 0 - pin direction is INPUT 1 - pin direction is OUTPUT 2 - pin direction is ALTERNATE FUNCTION (see Note). 3 - pin is set to PULL DOWN (see Note) Note: when **<mode>=2** (and **<dir>** is omitted) the command reports the direction and value of pin **GPIO<pin>** in the format: **#GPIO: <dir>,<stat>** where: **<dir>** - current direction setting for the **GPIO<pin>** **<stat>** - logic value read from pin **GPIO<pin>** in the case the pin **<dir>** is set to input; - logic value present in output of the pin **GPIO<pin>** in the case the pin **<dir>** is currently set to output; - no meaning value for the pin **GPIO<pin>** in the case the pin **<dir>** is set to alternate function or Tristate pull down Note: "ALTERNATE FUNCTION" value is valid only for following pins: - **GPIO4** - alternate function is “RF Transmission Control” - **GPIO5** - alternate function is “RF Transmission Monitor” - **GPIO6** - alternate function is "Alarm Output" (see **+CALA and #ALARMPIN**) - **GPIO7** - alternate function is "Buzzer Output" (see **#SRP**) Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided. Note: Tristate pull down settings is available only on some products and GPIO. In case it is not available, automatically the setting is reverted to INPUT. Check the product HW user guide to verify if Tristate pull down settings is available and if it is the default at system start-up
AT#GPIO?	Read command reports the read direction and value of all **GPIO** pins, in the format: **#GPIO: <dir>,<stat>[<CR><LF>#GPIO: <dir>,<stat>[…]]**

#GPIO - General Purpose Input/Output Pin Control	SELINT 0/1
	where <**dir**> - as seen before <**stat**> - as seen before
AT#GPIO=?	Test command reports the supported range of values of the command parameters <**pin**>, <**mode**> and <**dir**>.
Example	AT#GPIO=3,0,1 OK AT#GPIO=3,2 #GPIO: 1,0 OK AT#GPIO=4,1,1 OK AT#GPIO=5,0,0 OK AT#GPIO=6,2 #GPIO: 0,1 OK

#GPIO - General Purpose Input/Output Pin Control	SELINT 2
AT#GPIO=[<pin>, <mode>[,<dir>[,<save]]]	Execution command sets the value of the general purpose output pin **GPIO<pin>** according to <**dir**> and <**mode**> parameter. Not all configurations for the three parameters are valid. Parameters: <**pin**> - GPIO pin number; supported range is from 1 to a value that depends on the hardware. <**mode**> - its meaning depends on <**dir**> setting: 0 - no meaning if <**dir**>=**0** - INPUT - output pin cleared to 0 (**Low**) if <**dir**>=**1** - OUTPUT - no meaning if <**dir**>=**2** - ALTERNATE FUNCTION - no meaning if <**dir**>=**3** – TRISTATE PULL DOWN - no meaning if <**dir**>=**4** – 2nd ALTERNATE FUNCTION 1 - no meaning if <**dir**>=**0** - INPUT - output pin set to 1 (**High**) if <**dir**>=**1** - OUTPUT - no meaning if <**dir**>=**2** - ALTERNATE FUNCTION - no meaning if <**dir**>=**3** – TRISTATE PULL DOWN - no meaning if <**dir**>=**4** – 2nd ALTERNATE FUNCTION 2 - Reports the read value from the input pin if <**dir**>=**0** - INPUT - Reports the read value from the input pin if <**dir**>=**1** - OUTPUT - Reports a no meaning value if <**dir**>=**2** - ALTERNATE FUNCTION - Reports a no meaning if <**dir**>=**3** – TRISTATE PULL DOWN - Reports a no meaning value if <**dir**>=**4** – 2nd ALTERNATE FUNCTION 3 - if <**dir**>=**0** – INPUT, enable Pull-Up 4 - if <**dir**>=**0** – INPUT, enable Pull-Down

#GPIO - General Purpose Input/Output Pin Control	SELINT 2

<dir> - GPIO pin direction
0 - pin direction is INPUT
1 - pin direction is OUTPUT
2 - pin direction is ALTERNATE FUNCTION (see Note).
3 - pin is set to PULL DOWN, obsolete, keep it only for retro compatibility reason. Use **<mode>** to set pull down
4 - pin direction is 2nd ALTERNATE FUNCTION (see Note).

<save> - GPIO pin save configuration
0 – pin configuration is not saved
1 – pin configuration is saved

Note: when <save> is omitted the configuration is stored only if user set or reset ALTERNATE function on <dir> parameter.

Note: when **<mode>=2** (and **<dir>** is omitted) the command reports the direction and value of pin **GPIO<pin>** in the format:

#GPIO: <dir>,<stat>

where:
<dir> - current direction setting for the **GPIO<pin>**
<stat>
- logic value read from pin **GPIO<pin>** in the case the pin **<dir>** is set to input;
- logic value present in output of the pin **GPIO<pin>** in the case the pin **<dir>** is currently set to output;
- no meaning value for the pin **GPIO<pin>** in the case the pin **<dir>** is set to alternate function or Tristate pull down

Note: "ALTERNATE FUNCTION" value is valid only for following pins:
- **GPIO4** - alternate function is “RF Transmission Control”
- **GPIO5** - alternate function is “RF Transmission Monitor”
- **GPIO6** - alternate function is "Alarm Output" (see **+CALA and #ALARMPIN**)
- **GPIO7** - alternate function is "Buzzer Output" (see **#SRP**)

Note: "2nd ALTERNATE FUNCTION" has no effect except on GE866 family, and it will return always OK, but the GPIO direction doesn’t change.

Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided.

For GE866 family products only

Note: "ALTERNATE FUNCTION" value is valid only for following pins:

#GPIO - General Purpose Input/Output Pin Control	SELINT 2
	□ **GPIO4** - alternate function is “RF Transmission Control” □ **GPIO5** - alternate function is “RF Transmission Monitor” □ **GPIO6** - alternate function is "Alarm Output" (see **+CALA and #ALARMPIN**) Note: "2nd ALTERNATE FUNCTION" value is valid only for following pin: □ **GPIO6** – 2nd alternate function is "Buzzer Output" (see **#SRP**) For other GPIO the command returns OK but the GPIO direction doesn’t change Note: Tristate pull down/ pull up settings are available only on some products and GPIO. In case they are not available, automatically the setting is reverted to INPUT. Check the product HW user guide to verify if pull down/ pull up settings are available and if the pull down is the default at system start-up
AT#GPIO?	Read command reports the read direction and value of all **GPIO** pins, in the format: **#GPIO: <dir>,<stat>[<CR><LF>#GPIO: <dir>,<stat>[…]]** where **<dir>** - as seen before **<stat>** - as seen before
AT#GPIO=?	Test command reports the supported range of values of the command parameters **<pin>**, **<mode>** and **<dir>**.
Example	AT#GPIO=3,0,1 OK AT#GPIO=3,2 #GPIO: 1,0 OK AT#GPIO=4,1,1 OK AT#GPIO=5,0,0 OK AT#GPIO=6,2 #GPIO: 0,1 OK AT#GPIO=3,0,1,1 OK

3.5.7.1.28. Alarm Pin - #ALARMPIN

#ALARMPIN – Alarm Pin	SELINT 2
AT#ALARMPIN=<pin>	Set command sets the GPIO pin for the ALARM pin Parameters:

	<pin> defines which GPIO shall be used as ALARM pin instead of GPIO6/ALARM. For the **<pin>** actual range check the "Hardware User Guide". Default value is 6. Note: the setting is saved in NVM Note: setting **<pin>** equal to 0 disables the ALARM pin
AT#ALARMPIN?	Read command returns the current parameter settings for **#ALARMPIN** command in the format: **#ALARMPIN: <pin>**
AT#ALARMPIN=?	Test command reports the supported range of values for parameter **<pin>**.

3.5.7.1.29. STAT_LED GPIO Setting - #SLED

#SLED - STAT_LED GPIO Setting	**SELINT 2**
AT#SLED=<mode>[,<on_duration>[,<off_duration>]]	Set command sets the behaviour of the **STAT_LED** GPIO Parameters: **<mode>** - defines how the **STAT_LED** GPIO is handled 0 - GPIO tied **Low** (default for GE866-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3 GL868-DUAL, GL868-DUAL V3, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - GPIO tied **High** 2 - GPIO handled by Module Software (factory default for all products except GE866-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3 GL868-DUAL, GL868-DUAL V3, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 3 - GPIO is turned on and off alternatively, with period defined by the sum **<on_duration> + <off_duration>** <**on_duration**> - duration of period in which **STAT_LED** GPIO is tied **High** while **<mode>=3** 1..100 - in tenth of seconds (default is 10) <**off_duration**> - duration of period in which **STAT_LED** GPIO is tied **Low** while **<mode>=3** 1..100 - in tenth of seconds (default is 10) Note: values are saved in NVM by command **#SLEDSAV** Note: at module boot the **STAT_LED** GPIO is always tied **High** and holds this value until the first NVM reading.
AT#SLED?	Read command returns the **STAT_LED** GPIO current setting, in the format: **#SLED: <mode>,<on_duration>,<off_duration>**
AT#SLED=?	Test command returns the range of available values for parameters **<mode>**, **<on_duration>** and **<off_duration>**.

3.5.7.1.30. Save STAT_LED GPIO Setting - #SLEDSAV

#SLEDSAV - Save STAT_LED GPIO Setting	SELINT 2
AT#SLEDSAV	Execution command saves **STAT_LED** setting in NVM. Note: if LED pin shares a user GPIO pin, **AT#GPIO=<pin>,<mode>,<dir>,1** has always higher priority than **AT#SLEDSAV** command, therefore if customer use both commands, the **AT#SLED?** read command has no meaning in the above scenario. After system reboot the pin status is that stored by **AT#GPIO=<pin>,<mode>,<dir>,1**. Customer must choose the scope of the pin: GPIO or LED.
AT#SLED=?	Test command returns **OK** result code.

3.5.7.1.31. Analog/Digital Converter Input - #ADC

#ADC - Analog/Digital Converter Input	SELINT 0 / 1
AT#ADC[=<adc>,<mode>[,<dir>]]	Execution command reads pin**<adc>** voltage, converted by ADC, and outputs it in the format: **#ADC: <value>** where: **<value>** - pin**<adc>** voltage, expressed in mV Parameters: **<adc>** - index of pin For the number of available ADCs see HW User Guide **<mode>** - required action 2 - query ADC value **<dir>** - direction; its interpretation is currently not implemented 0 - no effect. If all parameters are omitted the command reports all pins voltage, converted by ADC, in the format: **#ADC: <value>[<CR><LF>#ADC: <value>[…]]** Note: The command returns the last valid measure.
AT#ADC?	Read command has the same effect as Execution command when all parameters are omitted.
AT#ADC=?	Test command reports the supported range of values of the command parameters **<adc>**, **<mode>** and **<dir>**.

#ADC - Read Analog/Digital Converter input	SELINT 2
AT#ADC=[<adc>,<mode>	Execution command reads pin**<adc>** voltage, converted by ADC, and outputs it in the format:

#ADC - Read Analog/Digital Converter input	SELINT 2
[,<dir>]]	**#ADC: <value>** where: **<value>** - pin**<adc>** voltage, expressed in mV Parameters: **<adc>** - index of pin For the number of available ADCs see HW User Guide **<mode>** - required action 2 - query ADC value **<dir>** - direction; its interpretation is currently not implemented 0 - no effect. Note: The command returns the last valid measure.
AT#ADC?	Read command reports all pins voltage, converted by ADC, in the format: **#ADC: <value>[<CR><LF>#ADC: <value>[…]]**
AT#ADC=?	Test command reports the supported range of values of the command parameters **<adc>**, **<mode>** and **<dir>**.

3.5.7.1.32. Digital/Analog Converter Control - #DAC

#DAC - Digital/Analog Converter Control	SELINT 0 / 1
AT#DAC[= <enable> [,<value>]]	Set command enables/disables the **DAC_OUT** pin. Parameters: **<enable>** - enables/disables DAC output. 0 - disables pin; it is in high impedance status (factory default) 1 - enables pin; the corresponding output is driven **<value>** - scale factor of the integrated output voltage; it must be present if **<enable>=1** 0..1023 - 10 bit precision Note: **integrated output voltage = MAX_VOLTAGE * value / 1023** Note: if all parameters are omitted then the behaviour of Set command is the same as the Read command.
AT#DAC?	Read command reports whether the **DAC_OUT** pin is currently enabled or not, along with the integrated output voltage scale factor, in the format: **#DAC: <enable>,<value>**
AT#DAC=?	Test command reports the range for the parameters **<enable>** and **<value>**.
Example	Enable the DAC out and set its integrated output to the 50% of the max value:

#DAC - Digital/Analog Converter Control	SELINT 0 / 1
	AT#DAC=1,511 OK Disable the DAC out: AT#DAC=0 OK
Note	With this command the DAC frequency is selected internally. D/A converter must not be used during POWERSAVING. **DAC_OUT** line must be integrated (for example with a low band pass filter) in order to obtain an analog voltage. For a more in depth description of the integration filter refer to the hardware user guide.

#DAC - Digital/Analog Converter Control	SELINT 2
AT#DAC= [<enable> [,<value>]]	Set command enables/disables the **DAC_OUT** pin. Parameters: **<enable>** - enables/disables DAC output. 0 - disables pin; it is in high impedance status (factory default) 1 - enables pin; the corresponding output is driven **<value>** - scale factor of the integrated output voltage; it must be present if **<enable>=1** 0..1023 - 10 bit precision Note: **integrated output voltage = MAX_VOLTAGE * value / 1023**
AT#DAC?	Read command reports whether the **DAC_OUT** pin is currently enabled or not, along with the integrated output voltage scale factor, in the format: **#DAC: <enable>,<value>**
AT#DAC=?	Test command reports the range for the parameters **<enable>** and **<value>**.
Example	*Enable the DAC out and set its integrated output to the 50% of the max value:* AT#DAC=1,511 OK *Disable the DAC out:* AT#DAC=0 OK
Note	With this command the DAC frequency is selected internally. D/A converter must not be used during POWERSAVING. **DAC_OUT** line must be integrated (for example with a low band pass filter) in order to obtain an analog voltage. For a more in depth description of the integration filter refer to the hardware user guide.

3.5.7.1.33. Auxiliary Voltage Output Control - #VAUX

#VAUX- Auxiliary Voltage Output Control	SELINT 0 / 1
AT#VAUX[=<n>, <stat>]	Set command enables/disables the Auxiliary Voltage pins output. Parameters: **<n>** - **VAUX** pin index 1 - there is currently just one **VAUX** pin **<stat>** 0 - output off 1 - output on 2 - query current value of **VAUX** pin Note: when **<stat>=2** and command is successful, it returns: **#VAUX: <value>** where: **<value>** - power output status 0 - output off 1 - output on Note: If all parameters are omitted the command has the same behaviour as Read command. Note: for the GPS product: if the Auxiliary Voltage pin output is disabled while GPS is powered on they'll both also be turned off. Note: for the GPS products, at commands $GPSP, $GPSPS, $GPSWK control VAUX and can interfere with AT# command.
AT#VAUX?	Read command reports whether the Auxiliary Voltage pin output is currently enabled or not, in the format: **#VAUX: <value>**
AT#VAUX=?	Test command reports the supported range of values for parameters **<n>**, **<stat>**.
NOTE:	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xxx

#VAUX- Auxiliary Voltage Output Control	SELINT 2
AT#VAUX= [<n>,<stat>]	Set command enables/disables the Auxiliary Voltage pins output. Parameters: **<n>** - **VAUX** pin index 1 - there is currently just one **VAUX** pin **<stat>** 0 - output off 1 - output on 2 - query current value of **VAUX** pin

#VAUX- Auxiliary Voltage Output Control	SELINT 2
	Note: when **<stat>=2** and command is successful, it returns: **#VAUX: <value>** where: **<value>** - power output status 0 - output off 1 - output on Note: for the GPS product: if the Auxiliary Voltage pins output is disabled while GPS is powered on they'll both also be turned off. Note: for the GPS products, at commands $GPSP, $GPSPS, $GPSWK control VAUX and can interfere with AT# command. Note: the current setting is stored through **#VAUXSAV**
AT#VAUX?	Read command reports whether the Auxiliary Voltage pin output is currently enabled or not, in the format: **#VAUX: <value>**
AT#VAUX=?	Test command reports the supported range of values for parameters **<n>**, **<stat>**.
NOTE:	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xxx

3.5.7.1.34. Auxiliary Voltage Output Save - #VAUXSAV

#VAUXSAV - Auxiliary Voltage Output Save	SELINT 2
AT#VAUXSAV	Execution command saves the actual state of **#VAUX** pin to NVM. The state will be reload at power-up.
AT#VAUXSAV=?	Test command returns the **OK** result code.

3.5.7.1.35. V24 Output pins mode - #V24MODE

#V24MODE - V24 Output Pins Mode	SELINT 2
AT#V24MODE=<port>, <mode>, <when>	Set command sets the **<port>** serial interface functioning **<mode>**. Parameters: **<port>** - serial port: 0 – **ASC0** (AT command port) 1 – **ASC1** (trace port) **<mode>** - AT commands serial port interface hardware pins mode: 0 – Tx and Rx pins are set in push/pull function. (default) 1 – Tx and Rx pins are set in open drain function. 2 – Reserved **<when>** - When the settings expressed in <mode> are applied: 0 – Always (default)

#V24MODE - V24 Output Pins Mode	SELINT 2
	1 – In power saving only
AT#V24MODE?	Read command returns actual functioning **<mode>** for all ports in the format: **#V24MODE: 0,<mode_port0>,<when0>[<CR><LF>** **#V24MODE: 1,<mode_port1>,<when1> [<CR><LF>** Where: **< mode_port0> -** mode of the serial port 0, **< mode_port1> -** mode of the serial port 1, **<when0>** - when setting for serial port 0, **<when1>** - when setting for serial port 1
AT#V24MODE=?	Test command reports supported range of values for parameters **<port>, <mode> and <when>**.

3.5.7.1.36. V24 Output Pins Configuration - #V24CFG

#V24CFG - V24 Output Pins Configuration	SELINT 2
AT#V24CFG=<pin>, <mode>[,<save>]	Set command sets the AT commands serial port interface output pins mode. Parameters: **<pin>** - AT commands serial port interface hardware pin: 0 – **DCD** (Data Carrier Detect) 1 – **CTS** (Clear To Send) 2 – **RI** (Ring Indicator) 3 – **DSR** (Data Set Ready) 4 – **DTR** (Data Terminal Ready). This is not an output pin, so its state cannot be set through the **AT#V24** command. 5 – **RTS** (Request To Send). This is not an output pin, so its state cannot be set through the **AT#V24** command. **<mode>** - AT commands serial port interface hardware pins mode: 0 – AT commands serial port mode: the V24 pins are controlled by the serial port device driver (default) 1 – GPIO mode: the V24 output pins can be managed through the **AT#V24** command **<save>** - Save V24 pin configuration: 0 – Pin configuration is not saved 1 – Pin configuration is saved Note: when **<mode>=1,** the V24 pins, both output and input, can be set to control an external GNSS receiver through the **AT$GPSGPIO** command. (SW release 10.0x.xxx and 16.0x.xxx only) Note: when the **<save>** parameter is omitted, the pin configuration is NOT stored. Note: changing V24 pins configuration may affect the cellular module functionality set through **AT+CFUN**.

#V24CFG - V24 Output Pins Configuration	SELINT 2
AT#V24CFG?	Read command returns the current configuration for all the pins (both output and input) in the format: **#V24CFG: <pin1>,<mode1>[<CR><LF><CR><LF>** **#V24CFG: <pin2>,<mode2>[...]]** Where: **<pin*n*>** - AT command serial port interface HW pin **<mode*n*>** - AT commands serial port interface hardware pin mode
AT#V24CFG=?	Test command reports supported range of values for parameters **<pin>**, **<mode>** **and <save>**.

3.5.7.1.37. V24 Output Pins Control - #V24

#V24 - V24 Output Pins Control	SELINT 2
AT#V24=<pin> **[,<state>]**	Set command sets the AT commands serial port interface output pins state. Parameters: **<pin>** - AT commands serial port interface hardware pin: 0 - **DCD** (Data Carrier Detect) 1 - **CTS** (Clear To Send) 2 - **RI** (Ring Indicator) 3 - **DSR** (Data Set Ready) 4 - **DTR** (Data Terminal Ready). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code "**ERROR**" 5 - **RTS** (Request To Send). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code "**ERROR**" **<state>** - State of AT commands serial port interface output hardware pins(0, 1, 2, 3) when pin is in GPIO mode (see **#V24CFG**): 0 - Low 1 - High Note: if **<state>** is omitted the command returns the actual state of the pin **<pin>**.
AT#V24?	Read command returns actual state for all the pins (either output and input) in the format: **#V24: <pin1>,<state1>[<CR><LF>** **#V24: <pin2>,<state2>[...]]** where **<pin*n*>** - AT command serial port interface HW pin **<state*n*>** - AT commands serial port interface hardware pin state
AT#V24=?	Test command reports supported range of values for parameters **<pin>** and **<state>**.

3.5.7.1.38. RF Transmission Monitor Mode - #TXMONMODE

#TXMONMODE – RF Transmission Monitor Mode	SELINT 2
AT#TXMONMODE= <mode>	Set **TXMON** pin behaviour. Parameter: **<mode>** 0 - **TXMON** pin goes high when a call is started and it drops down when the call is ended. It also goes high when a location update starts, and it drops down when the location update procedure stops. Finally it goes high during SMS transmission and receiving. Even if the **TXMON** in this case is set as **GPIO** in output, the read command **AT#GPIO=5,2** returns **#GPIO:2,0**, as the **GPIO** is in alternate mode. 1 - **TXMON** is set in alternate mode and the Timer unit controls its state. **TXMON** goes high before power ramps start raising and drops down after power ramps stop falling down. This behaviour is repeated for every transmission burst. Note: if user sets GPIO 5 as input or output the TXMON does not follow the above behaviour. Note: if **<mode>** is change during a call from 1 to 0, TXMON goes down. If it is restored to 1, TXMON behaves as usual, following the bursts.
AT#TXMONMODE?	Read command reports the **<mode>** parameter set value, in the format: **#TXMONMODE: <mode>**
AT#TXMONMODE =?	Test command reports the supported values for **<mode>** parameter.

3.5.7.1.39. Battery And Charger Status - #CBC

#CBC- Battery And Charger Status	SELINT 0 / 1
AT#CBC	Execution command returns the current Battery and Charger state in the format: **#CBC: <ChargerState>,<BatteryVoltage>** where: **<ChargerState>** - battery charger state 0 - charger not connected 1 - charger connected and charging 2 - charger connected and charge completed **<BatteryVoltage>** - battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected this value depends on the charger voltage.
AT#CBC?	Read command has the same meaning as Execution command.

#CBC- Battery And Charger Status		SELINT 0 / 1
AT#CBC=?	Test command returns the **OK** result code.	

#CBC- Battery And Charger Status	SELINT 2
AT#CBC	Execution command returns the current Battery and Charger state in the format: **#CBC: <ChargerState>,<BatteryVoltage>** where: **<ChargerState>** - battery charger state 0 - charger not connected 1 - charger connected and charging 2 - charger connected and charge completed **<BatteryVoltage>** - battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected this value depends on the charger voltage.
AT#CBC=?	Test command returns the **OK** result code.

3.5.7.1.40. Fast Battery And Charger Status - #FASTCBC

#FASTCBC – Fast Battery And Charger Status	SELINT 2
AT#FASTCBC	Execution command returns the current Battery and Charger state in the format: **#FASTCBC: <ChargerState>,<BatteryVoltage>** where: **<ChargerState>** - battery charger state 0 - charger not connected 1 - charger connected and charging 2 - charger connected and charge completed **<BatteryVoltage>** - battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected, this value depends on the charger voltage.
AT#FASTCBC?	Read command has the same meaning as Execution command.
AT#FASTCBC=?	Test command returns the **OK** result code.

3.5.7.1.41. GPRS Auto-Attach Property - #AUTOATT

#AUTOATT - Auto-Attach Property	SELINT 0 / 1
AT#AUTOATT [=<auto>]	Set command enables/disables the TE GPRS auto-attach property when the module is in GPRS class B (see AT+CGCLASS). Parameter:

#AUTOATT - Auto-Attach Property	SELINT 0 / 1
	<auto> 0 - disables GPRS auto-attach property 1 - enables GPRS auto-attach property (factory default): after the command **#AUTOATT=1** has been issued (and at every following startup) the terminal will automatically try to attach to the GPRS service. Note: If parameter is omitted then the behaviour of Set command is the same as Read command.
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enabled or not, in the format: **#AUTOATT: <auto>**
AT#AUTOATT=?	Test command reports available values for parameter **<auto>**.

#AUTOATT - Auto-Attach Property	SELINT 2
AT#AUTOATT= [<auto>]	Set command enables/disables the TE GPRS auto-attach property. Parameter: **<auto>** 0 - disables GPRS auto-attach property 1 - enables GPRS auto-attach property (factory default): after the command **#AUTOATT=1** has been issued (and at every following startup) the terminal will automatically try to attach to the GPRS service. 2 - disables GPRS auto-attach property (available also for class "CG")
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enabled or not, in the format: **#AUTOATT: <auto>**
AT#AUTOATT=?	Test command reports available values for parameter **<auto>**.

3.5.7.1.42. Multislot Class Control - #MSCLASS

#MSCLASS - Multislot Class Control	SELINT 0 / 1
AT#MSCLASS[= <class>[, <autoattach>]]	Set command sets the multislot class Parameters: **<class>** - multislot class; take care: class 7 is not supported. 1..6 - GPRS class 8..10 - GPRS class **<autoattach>** 0 - the new multislot class is enabled only at the next detach/attach or after a reboot. 1 - the new multislot class is enabled immediately, automatically forcing a detach / attach procedure.

#MSCLASS - Multislot Class Control	SELINT 0 / 1
	Note: if all parameters are omitted the behaviour of set command is the same as read command.
AT#MSCLASS?	Read command reports the current value of the multislot class in the format: **#MSCLASS: <class>**
AT#MSCLASS=?	Test command reports the range of available values for parameter **<class>**.

#MSCLASS - Multislot Class Control	SELINT 2
AT#MSCLASS=[<class>[,<autoattach>]]	Set command sets the multislot class Parameters: **<class>** - multislot class; take care: class 7 is not supported. 1..6 - GPRS class 8..10 - GPRS class **<autoattach>** 0 - the new multislot class is enabled only at the next detach/attach or after a reboot. 1 - the new multislot class is enabled immediately, automatically forcing a detach / attach procedure.
AT#MSCLASS?	Read command reports the current value of the multislot class in the format: **#MSCLASS: <class>**
AT#MSCLASS=?	Test command reports the range of available values for both parameters **<class>** and **<autoattach>**.

3.5.7.1.43. Cell Monitor - #MONI

#MONI - Cell Monitor	SELINT 0 / 1
AT#MONI[=[<number>]]	**#MONI** is both a set and an execution command. Set command sets one cell out of seven, in ~~a~~ the neighbour list of the serving cell including it, from which we extract GSM-related information. Parameter: **<number>** 0..6 - it is the ordinal number of a cell, in ~~a~~ the neighbour list of the serving cell (default 0, serving cell). 7 - it is a special request to obtain GSM-related information~~s~~ from the whole set of seven cells in the neighbour list of the serving cell. Note: issuing **AT#MONI<CR>** is the same as issuing the Read command. Note: issuing **AT#MONI=<CR>** is the same as issuing the command **AT#MONI=0<CR>**.

#MONI - Cell Monitor	SELINT 0 / 1
AT#MONI?	Execution command reports GSM-related informations for selected cell and dedicated channel (if exists). a) When extracting data for the serving cell and the network name is known the format is: **#MONI: <netname> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id> ARFCN:<arfcn> PWR:<dBm> dBm TA: <timadv>** b) When the network name is unknown, the format is: **#MONI: <cc> <nc> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id> ARFCN:<arfcn> PWR:<dBm> dBm TA: <timadv>** c) When extracting data for an adjacent cell, the format is: **#MONI: Adj Cell<n> [LAC:<lac> Id:<id>] ARFCN:<arfcn> PWR:<dBm> dBm** where: **<netname>** - name of network operator **<cc>** - country code **<nc>** - network operator code **<n>** - progressive number of adjacent cell **<bsic>** - base station identification code **<qual>** - quality of reception 0..7 **<lac>** - localization area code **<id>** - cell identifier **<arfcn>** - assigned radio channel **<dBm>** - received signal strength in dBm **<timadv>** - timing advance Note: TA: **<timadv>** is reported only for the serving cell. 1. If the last setting done by **#MONI** is **7**, the execution command produces a table-like formatted output, as follows: a. First row reports the identifying name of the 'columns' **#MONI:** **Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PL MN<CR><LF>** b. Second row reports a complete set of GSM-related information for the serving cell: **#MONI:** **S: <bsic> <lac> <id> <arfcn> <dBm> <C1value> <C2value> <timadv> <qual> <netname><CR><LF>**

#MONI - Cell Monitor	SELINT 0 / 1
	c. 3rd to 8th rows report a reduced set of GSM-related information for the cells in the neighbours: **#MONI:** **N<n> <bsic> <lac> <id> <arfcn> <dBm> <C1value> <C2value>[<CR><LF>]** where: **<C1value>** - C1 reselection parameter **<C2value>** - C2 reselection parameter *other parameters as before*
AT#MONI=?	Test command reports the maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related informations, along with the ordinal number of the current selected cell, in the format: **#MONI: (<MaxCellNo>,<CellSet>)** where: **<MaxCellNo>** - maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related informations (for compatibility with previous versions of code this value is always **5**). **<CellSet>** - the last setting done with command **#MONI**. An enhanced version of the Test command has been defined: **AT#MONI=??** Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.
AT#MONI=??	Enhanced test command reports the maximum number of cells, in a the neighbour list of the serving cell and including it, from which we can extract GSM-related informations, along with the ordinal number of the current selected cell, in the format: **#MONI: (<MaxCellNo>,<CellSet>)** where: **<MaxCellNo>** - maximum number of cells, in a the neighbour list of the serving cell and including it, from which we can extract GSM-related informations. This value is always **7**. **<CellSet>** - the last setting done with command **#MONI**. Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.
Example	*Set command selects the cell 0* at#moni=0 OK

#MONI - Cell Monitor	SELINT 0 / 1
	Execution command reports GSM-related information for cell 0 at#moni #MONI: I WIND BSIC:70 RxQual:0 LAC:55FA Id:1D23 ARFCN:736 PWR:-83dbm TA:1 OK *Set command selects the special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell* at#moni=7 OK *Execution command reports the requested information in table-like format* at#moni #MONI: Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PLMN #MONI: S 70 55FA 1D23 736 -83dbm 19 33 1 0 I WIND #MONI: N1 75 55FA 1297 983 -78dbm 26 20 #MONI: N2 72 55FA 1289 976 -82dbm 22 16 #MONI: N3 70 55FA 1D15 749 -92dbm 10 18 #MONI: N4 72 55FA 1D0D 751 -92dbm 10 18 #MONI: N5 75 55FA 1296 978 -95dbm 9 3 #MONI: N6 70 55FA 1D77 756 -99dbm 3 11 OK
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

#MONI - Cell Monitor	SELINT 2
AT#MONI[= [<number>]]	**#MONI** is both a set and an execution command. Set command sets one cell out of seven, in ~~a~~ the neighbour list of the serving cell including it, from which extract GSM-related information. Parameter: **<number>** 0..6 - it is the ordinal number of the cell, in ~~a~~ the neighbour list of the serving cell (default 0, serving cell). 7 - it is a special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell. Execution command (**AT#MONI<CR>**) reports GSM-related information for selected cell and dedicated channel (if exists). 2. If the last setting done by **#MONI** is in the range **[0..6]**, the output format is as follows: d)When extracting data for the serving cell and the network name is known the format is:

#MONI - Cell Monitor	SELINT 2

#MONI: <netname> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id> ARFCN:<arfcn> PWR:<dBm> dBm TA: <timadv>

e) When the network name is unknown, the format is:
#MONI: <cc> <nc> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id> ARFCN:<arfcn> PWR:<dBm> dBm TA: <timadv>

f) When extracting data for an adjacent cell, the format is:
#MONI: Adj Cell<n> [LAC:<lac> Id:<id>] ARFCN:<arfcn> PWR:<dBm> dBm

where:
<netname> - name of network operator
<cc> - country code
<nc> - network operator code
<n> - progressive number of adjacent cell
<bsic> - base station identification code
<qual> - quality of reception
0..7
<lac> - localization area code
<id> - cell identifier
<arfcn> - assigned radio channel
<dBm> - received signal strength in dBm
<timadv> - timing advance

Note: TA: **<timadv>** is reported only for the serving cell.

3. If the last setting done by **#MONI** is **7**, the execution command produces a table-like formatted output, as follows:

a. First row reports the identifying name of the 'columns'
#MONI:
Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PL MN<CR><LF>

b. Second row reports a complete set of GSM-related information for the serving cell:
#MONI:
S: <bsic> <lac> <id> <arfcn> <dBm> <C1value> <C2value> <timadv> <qual> <netname><CR><LF>

c. 3rd to 8th rows report a reduced set of GSM-related information for the cells in the neighbours:
#MONI:
N<n> <bsic> <lac> <id> <arfcn> <dBm> <C1value> <C2value>[<CR><LF>]

#MONI - Cell Monitor	SELINT 2
	where: **<C1value>** - C1 reselection parameter **<C2value>** - C2 reselection parameter *other parameters as before*
AT#MONI=?	Test command reports the maximum number of cells, in ~~a~~ the neighbour list of the serving cell excluding it, from which we can extract GSM-related information~~s~~, along with the ordinal number of the current selected cell, in the format: **#MONI: (<MaxCellNo>,<CellSet>)** where: **<MaxCellNo>** - maximum number of cells, in ~~a~~ the neighbour list of the serving cell and excluding it, from which we can extract GSM-related information~~s~~. This value is always **6**. **<CellSet>** - the last setting done with command **#MONI**.
Example	*Set command selects the cell 0* at#moni=0 OK *Execution command reports GSM-related information for cell 0* at#moni #MONI: I WIND BSIC:70 RxQual:0 LAC:55FA Id:1D23 ARFCN:736 PWR:-83dbm TA:1 OK *Set command selects the special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell* at#moni=7 OK *Execution command reports the requested information in table-like format* at#moni #MONI: Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PLMN #MONI: S 70 55FA 1D23 736 -83dbm 19 33 1 0 I WIND #MONI: N1 75 55FA 1297 983 -78dbm 26 20 #MONI: N2 72 55FA 1289 976 -82dbm 22 16 #MONI: N3 70 55FA 1D15 749 -92dbm 10 18 #MONI: N4 72 55FA 1D0D 751 -92dbm 10 18 #MONI: N5 75 55FA 1296 978 -95dbm 9 3 #MONI: N6 70 55FA 1D77 756 -99dbm 3 11 OK
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

3.5.7.1.44. Compressed Cell Monitor - #MONIZIP

#MONIZIP – Compressed Cell Monitor	SELINT 2
AT#MONIZIP[= [<number>]]	**#MONIZIP** is both a set and an execution command. Set command sets one cell out of seven, in ~~a~~ the neighbour list of the serving cell including it, from which extract GSM-related information. Parameter: **<number>** 0..6 - it is the ordinal number of the cell, in ~~a~~ the neighbour list of the serving cell (default 0, serving cell). 7 - it is a special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell. Execution command (**AT#MONIZIP<CR>)** reports GSM-related information for selected cell and dedicated channel (if exists). 4. If the last setting done by **#MONIZIP** is in the range **[0..6]**, the output format is as follows: g)When extracting data for the serving cell the format is: **#MONIZIP: <cc><nc>,<bsic>,<qual>,<lac>,<id>,<arfcn>, <dBm>, <timadv>** h)When extracting data for an adjacent cell, the format is: **#MONIZIP: <lac>,<id>,<arfcn>,<dBm>** where: **<cc>** - country code **<nc>** - network operator code **<n>** - progressive number of adjacent cell **<bsic>** - base station identification code **<qual>** - quality of reception 0..7 **<lac>** - localization area code **<id>** - cell identifier **<arfcn>** - assigned radio channel **<dBm>** - received signal strength in dBm **<timadv>** - timing advance Note: TA: **<timadv>** is reported only for the serving cell. 5. If the last setting done by **#MONIZIP** is **7**, the execution command produces a table-like formatted output, as follows: a. First row reports a complete set of GSM-related information for the serving cell: **#MONIZIP: <bsic>,<lac>,<id>,<arfcn>,<dBm>,<C1value>, <C2val**

#MONIZIP – Compressed Cell Monitor	SELINT 2
	ue>,<timadv>,<qual>,<cc><nc><CR><LF> b. 2nd to 7th rows report a reduced set of GSM-related information for the cells in the neighbours: **#MONIZIP: <bsic>,<lac>,<id>,<arfcn>,<dBm>,<C1value>, <C2value>[<CR><LF>]** where: **<C1value>** - C1 reselection parameter **<C2value>** - C2 reselection parameter *other parameters as before*
AT#MONIZIP=?	Test command reports the maximum number of cells, in the neighbour list of the serving cell excluding it, from which we can extract GSM-related information, along with the ordinal number of the current selected cell, in the format: **#MONIZIP: (<MaxCellNo>,<CellSet>)** where: **<MaxCellNo>** - maximum number of cells, in the neighbour list of the serving cell and excluding it, from which we can extract GSM-related information. This value is always **6**. **<CellSet>** - the last setting done with command **#MONIZIP**.
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

3.5.7.1.45. Serving Cell Information - #SERVINFO

#SERVINFO - Serving Cell Information	SELINT 0 / 1
AT#SERVINFO	Execution command reports information about serving cell, in the format: **#SERVINFO: <B-ARFCN>,<dBM>,<NetNameAsc>,<NetCode>, <BSIC>,<LAC>,<TA>,<GPRS>[,[<PB-ARFCN>],[<NOM>], <RAC>[,<PAT>]]** where: **<B-ARFCN>** - BCCH ARFCN of the serving cell **<dBM>** - received signal strength in dBm **<NetNameAsc>** - operator name, quoted string type **<NetCode>** - string representing the network operator in numeric format: 5 or 6 digits [country code (3) + network code (2 or 3)] **<BSIC>** - Base Station Identification Code **<LAC>** - Localization Area Code **<TA>** - Time Advance: it's available only if a GSM or GPRS is running

#SERVINFO - Serving Cell Information	SELINT 0 / 1
	<GPRS> - GPRS supported in the cell 0 - not supported 1 - supported The following information will be present only if GPRS is supported in the cell **<PB-ARFCN>** - • if PBCCH is supported by the cell o if its content is the PBCCH ARFCN of the serving cell, then **<PB-ARFCN>** is available o else the label **"hopping"** will be printed • else **<PB-ARFCN>** is not available **<NOM>** - Network Operation Mode "I" "II" "III" **<RAC>** - Routing Area ColoUr Code **<PAT>** - Priority Access Threshold 0 3..6 Note: during a call, a SMS sending/receiving or a location update the values of **<GPRS>, <PB-ARFCN>, <NOM>, <RAC>** and **<PAT>** parameters don't make sense.
AT#SERVINFO?	Read command has the same effect as Execution command
AT#SERVINFO=?	Test command tests for command existence (available only for 10.0x.xx5 and following versions)

#SERVINFO - Serving Cell Information	SELINT 2
AT#SERVINFO	Execution command reports information about serving cell, in the format: **#SERVINFO: <B-ARFCN>,<dBM>,<NetNameAsc>,<NetCode>, <BSIC>,<LAC>,<TA>,<GPRS>[,[<PB-ARFCN>],[<NOM>], <RAC>[,<PAT>]]** where: **<B-ARFCN>** - BCCH ARFCN of the serving cell **<dBM>** - received signal strength in dBm **<NetNameAsc>** - operator name, quoted string type **<NetCode>** - string representing the network operator in numeric format: 5 or 6 digits [country code (3) + network code (2 or 3)] **<BSIC>** - Base Station Identification Code **<LAC>** - Localization Area Code **<TA>** - Time Advance: it's available only if a GSM or GPRS is running **<GPRS>** - GPRS supported in the cell 0 - not supported

#SERVINFO - Serving Cell Information	SELINT 2
	1 - supported The following information will be present only if GPRS is supported in the cell **<PB-ARFCN>** - • if PBCCH is supported by the cell o if its content is the PBCCH ARFCN of the serving cell, then **<PB-ARFCN>** is available o else the label **"hopping"** will be printed • else **<PB-ARFCN>** is not available **<NOM>** - Network Operation Mode "I" "II" "III" **<RAC>** - Routing Area Colour Code **<PAT>** - Priority Access Threshold 0 3..6 Note: during a call, a SMS sending/receiving or a location update the values of **<GPRS>, <PB-ARFCN>, <NOM>, <RAC>** and **<PAT>** parameters don't make sense.
AT#SERVINFO=?	Test command tests for command existence (available only for 10.0x.xx5 and following versions)

3.5.7.1.46. +CCED - Cell Environment Description

+CCED – Cell Environment Description	SELINT 2
AT+CCED=<mode>[,<requested dump>][,<CsqStep>,<Extend>]	Set command retrieves the parameters of the main cell and dumps them. Parameters: **<mode>** - requested operation 0 - one shot requested; the requested dump is returned as intermediate response (factory default) **<requested dump>** - requested cell parameter; if omitted, the value 1 is used 1 - Main Cell only (factory default) **<CsqStep>** – dummy parameter not used and NOT CHECKED **<Extend>** - dummy parameter not used and NOT CHECKED The response format is: **+ CCED: <Main (serving) Cell dump>** where:

+CCED – Cell Environment Description	SELINT 2
	<Main Cell dump>: This parameter gathers the following parameters for the Main Cell: **[<MCC>],[<MNC>],[<LAC>][,<CI>],[<BSIC>],[<BCCH Freq>],[<RxLev>],[<RxLev Full>],[<RxLev Sub>],[<RxQual>],[<RxQual Full>],[<RxQual Sub>],[<Idle TS>]** Where **<MCC>**: Mobile Country Code, 3 digits **<MNC>**: Mobile Network Code , 2 or 3 digits **<LAC>**: Location Area Code string type; two byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) **<CI>** : Cell Id (string type; two bytes in hexadecimal format for <Act> equal to 0, four bytes in hexadecimal format otherwise. **<BSIC>**: Base Station Identity Code **<BCCH Freq>**: Broadcast Control CHannel Freq absolute (ARFCN) **<RxLev>**: RSSI level on BCCH channel **<RxLev Full>**: RSSI level on all TCH channel, in dedicated mode **<RxLev Sub>**: RSSI level on a subset of TCH channel, in dedicated mode **<RxQual>**: signal quality on BCCH channel, in idle mode **<RxQual Full>**: signal quality on all TCH channel, in dedicated mode **<RxQual Sub>**: signal quality on a subset of TCH channel, in dedicated mode **<Idle TS>**: Time Slot
AT+CCED=?	Test command returns the **OK** result code.

3.5.7.1.47. +COPS Mode - #COPSMODE

#COPSMODE - +COPS Mode	SELINT 0 / 1
AT#COPSMODE [=<mode>]	Set command sets the behaviour of **+COPS** command (*see* **+COPS**). Parameter: **<mode>** 0 - **+COPS** behaviour like former GM862 family products (default) 1 - **+COPS** behaviour compliant with ETSI format Note: The setting is saved in NVM (and available on following reboot). Note: if parameter **<mode>** is omitted the behaviour of Set command is the same as Read command.
AT#COPSMODE?	Read command returns the current behaviour of **+COPS** command, in the format: **#COPSMODE: <mode>** where **<mode>** - **+COPS** behaviour as seen before.

#COPSMODE - +COPS Mode		SELINT 0 / 1
AT#COPSMODE=?	Test command returns the range of available values for parameter **<mode>**.	
Note	It's suggested to reboot the module after every **#COPSMODE** setting.	

3.5.7.1.48. Query SIM Status - #QSS

#QSS – Query SIM Status		SELINT 0 / 1
AT#QSS[= [<mode>]]	Set command enables/disables the Query SIM Status unsolicited indication in the ME. Parameter: **<mode>** - type of notification 0 - disabled (factory default): it is possible only to query the current SIM status through Read command **AT#QSS?** 1 - enabled: the ME informs at every SIM status change through the following basic unsolicited indication: **#QSS: <status>** where: <status> - current SIM status 0 - SIM NOT INSERTED 1 - SIM INSERTED Note: issuing **AT#QSS<CR>** is the same as issuing the Read command.	
AT#QSS?	Read command reports whether the unsolicited indication **#QSS** is currently enabled or not, along with the SIM status, in the format: **#QSS: <mode>,<status>** (<**mode**> and <**status**> are described above)	
AT#QSS=?	Test command returns the supported range of values for parameter <**mode**>.	

#QSS – Query SIM Status		SELINT 2
AT#QSS= [<mode>]	Set command enables/disables the Query SIM Status unsolicited indication in the ME. Parameter: **<mode>** - type of notification 0 - disabled (factory default): it is possible only to query the current SIM status through Read command **AT#QSS?** 1 - enabled: the ME informs at every SIM status change through the following basic unsolicited indication: **#QSS: <status>**	

	where: <status> - current SIM status 0 - SIM NOT INSERTED 1 - SIM INSERTED 2 - enabled; the ME informs at every SIM status change through the following unsolicited indication: **#QSS: <status>** where: <status> - current SIM status 0 - SIM NOT INSERTED 1 - SIM INSERTED 2 - SIM INSERTED and PIN UNLOCKED 3 - SIM INSERTED and READY (SMS and Phonebook access are possible).
AT#QSS?	Read command reports whether the unsolicited indication **#QSS** is currently enabled or not, along with the SIM status, in the format: **#QSS: <mode>,<status>** (<**mode**> and <**status**> are described above)
AT#QSS=?	Test command returns the supported range of values for parameter <**mode**>.

3.5.7.1.49. ATD Dialing Mode - #DIALMODE

#DIALMODE - ATD Dialing Mode	**SELINT 0 / 1**
AT#DIALMODE[= <mode>]	Set command sets **ATD** modality. Parameter: **<mode>** 0 - (voice call only) **OK** result code is received as soon as it starts remotely ringing (factory default) 1 - (voice call only) **OK** result code is received only after the called party answers. Any character typed aborts the call and **NO CARRIER** result code is received. 2 - (voice call and data call) the following custom result codes are received, monitoring step by step the call status: **DIALING** (MO in progress) **RINGING** (remote ring) **CONNECTED** (remote call accepted; only for voice calls) **RELEASED** (after **ATH**) **DISCONNECTED** (remote hang-up; only for voice calls) Any character typed before the CONNECTED message aborts the call.

#DIALMODE - ATD Dialing Mode	SELINT 0 / 1
	Note: The setting is saved in NVM and available on following reboot. Note: In case a BUSY tone is received and at the same time **ATX0** is enabled **ATD** will return **NO CARRIER** instead of **DISCONNECTED.** Note: if parameter **<mode>** is omitted the behaviour of Set command is the same as Read command.
AT#DIALMODE?	Read command returns current **ATD** dialling mode in the format: **#DIALMODE: <mode>**
AT#DIALMODE=?	Test command returns the range of values for parameter **<mode>**

#DIALMODE - Dialing Mode	SELINT 2
AT#DIALMODE=[<mode>]	Set command sets dialling modality. Parameter: **<mode>** 0 - (voice call only) **OK** result code is received as soon as it starts remotely ringing (factory default) 1 – (voice call only) **OK** result code is received only after the called party answers. Any character typed aborts the call and **OK** result code is received. 2 - (voice call and data call) the following custom result codes are received, monitoring step by step the call status: **DIALING** (MO in progress) **RINGING** (remote ring) **CONNECTED** (remote call accepted; only for voice calls) **RELEASED** (after **ATH**) **DISCONNECTED** (remote hang-up; only for voice calls) Any character typed before the CONNECTED message aborts the call. Note: In case a BUSY tone is received and at the same time **ATX0** is enabled **ATD** will return **NO CARRIER** instead of **DISCONNECTED.** Note: The setting is saved in NVM and available on following reboot.
AT#DIALMODE?	Read command returns current **ATD** dialling mode in the format: **#DIALMODE: <mode>**
AT#DIALMODE=?	Test command returns the range of values for parameter **<mode>**

3.5.7.1.50. Automatic Call - #ACAL

#ACAL - Automatic Call	SELINT 0 / 1
AT#ACAL[=[<mode>]]	Set command enables/disables the automatic call function. Parameter:

#ACAL - Automatic Call	SELINT 0 / 1
	<mode> 0 - disables the automatic call function (factory default) 1 - enables the automatic call function. If enabled (and **&D2** has been issued), the transition **OFF/ON** of **DTR** causes an automatic call to the first number (position 0) stored in the internal phonebook. Note: type of call depends on the last issue of command **+FCLASS**. Note: issuing **AT#ACAL<CR>** is the same as issuing the Read command.
AT#ACAL?	Read command reports whether the automatic call function is currently enabled or not, in the format: **#ACAL: <mode>**
AT#ACAL=?	Test command returns the supported range of values for parameter **<mode>**.
Note	See **&Z** to write and **&N** to read the number on module internal phonebook.

#ACAL - Automatic Call	SELINT 2
AT#ACAL= **[<mode>]**	Set command enables/disables the automatic call function. Parameter: **<mode>** 0 - disables the automatic call function (factory default) 1 - enables the automatic call function. If enabled (and **&D2** has been issued), the transition **OFF/ON** of **DTR** causes an automatic call to the first number (position 0) stored in the internal phonebook. Note: type of call depends on the last issue of command **+FCLASS**.
AT#ACAL?	Read command reports whether the automatic call function is currently enabled or not, in the format: **#ACAL: <mode>** Note: as a consequence of the introduction of the command **#ACALEXT** (Extended Automatic Call) it is possible that the Read Command returns a value supported by **#ACALEXT** but **NOT** supported by **#ACAL**. **AT#ACAL?** **#ACAL : 2** **OK** Due to this possible situation it is strongly recommended not to use contemporaneously both commands.

#ACAL - Automatic Call	SELINT 2
AT#ACAL=?	Test command returns the supported range of values for parameter **<mode>**.
Note	See **&Z** to write and **&N** to read the number on module internal phonebook.

3.5.7.1.51. Extended Automatic Call - #ACALEXT

#ACALEXT - Extended Automatic Call	SELINT 0 / 1 / 2
AT#ACALEXT=<mode>,<index>	Set command enables/disables the extended automatic call function. Parameters: **<mode>** 0 - disables the automatic call function (factory default) 1 - enables the automatic call function from "ME" phonebook. 2 - enables the automatic call function from "SM" phonebook. **<index>** - it indicates a position in the currently selected phonebook. If the extended automatic call function is enabled and **&D2** has been issued, the transition **OFF/ON** of **DTR** causes an automatic call to the number stored in position **<index>** in the selected phonebook. Note: type of call depends on the last issue of command **+FCLASS**.
AT#ACALEXT?	Read command reports either whether the automatic call function is currently enabled or not, and the last **<index>** setting in the format: **#ACALEXT: <mode>,<index>**
AT#ACALEXT=?	The range of available positions in a phonebook depends on the selected phonebook. This is the reason why the test command returns three ranges of values: the first for parameter **<mode>,** the second for parameter **<index>** when "ME" is the chosen phonebook, the third for parameter **<index>** when "SM" is the chosen phonebook.
Note	Issuing **#ACALEXT** causes the **#ACAL <mode>** to be changed. Issuing **AT#ACAL=1** causes the **#ACALEXT <index>** to be set to default. It is recommended to NOT use contemporaneously either **#ACALEXT** and **#ACAL**
Note	See **&Z** to write and **&N** to read the number on module internal phonebook.

3.5.7.1.52. Extended Call Monitoring - #ECAM

#ECAM - Extended Call Monitoring	SELINT 0 / 1
AT#ECAM[=[<onoff>]]	This command enables/disables the call monitoring function in the **ME**. Parameter: **<onoff>** 0 - disables call monitoring function (factory default)

#ECAM - Extended Call Monitoring	SELINT 0 / 1
	1 - enables call monitoring function; the **ME** informs about call events, such as incoming call, connected, hang up etc. using the following unsolicited indication: **#ECAM: <ccid>,<ccstatus>,<calltype>,,, [<number>,<type>]** where **<ccid>** - call ID **<ccstatus>** - call status 0 - idle 1 - calling (MO) 2 - connecting (MO) 3 - active 4 - hold 5 - waiting (MT) 6 - alerting (MT) 7 - busy **<calltype>** - call type 1 - voice 2 - data **<number>** - called number (valid only for **<ccstatus>=1**) **<type>** - type of **<number>** 129 - national number 145 - international number Note: the unsolicited indication is sent along with usual codes (**OK**, **NO CARRIER**, **BUSY**...). Note: issuing **AT#ECAM<CR>** is the same as issuing the Read command. Note: issuing **AT#ECAM=<CR>** returns the **OK** result code.
AT#ECAM?	Read command reports whether the extended call monitoring function is currently enabled or not, in the format: **#ECAM: <onoff>**
AT#ECAM=?	Test command returns the list of supported values for **<onoff>**

#ECAM - Extended Call Monitoring	SELINT 2
AT#ECAM=[<onoff>]	This command enables/disables the call monitoring function in the ME. Parameter: **<onoff>** 0 - disables call monitoring function (factory default) 1 - enables call monitoring function 2 - enables call monitoring function with calling number display

#ECAM - Extended Call Monitoring	SELINT 2
	When enabled, the ME informs about call events, such as incoming call, connected, hang up etc. using the following unsolicited indication: **#ECAM: <ccid>,<ccstatus>,<calltype>,,,[<number>,<type>]** where **<ccid>** - call ID **<ccstatus>** - call status 0 - idle 1 - calling (MO) 2 - connecting (MO) 3 - active 4 - hold 5 - waiting (MT) 6 - alerting (MT) 7 - busy **<calltype>** - call type 1 - voice 2 - data **<number>** - called number, if **<ccstatus>=1**; calling number, if available, if **<ccstatus>=6** **<type>** - type of **<number>** 129 - national number 145 - international number Note: the unsolicited indication is sent along with usual codes (**OK**, **NO CARRIER**, **BUSY**...).
AT#ECAM?	Read command reports whether the extended call monitoring function is currently enabled or not, in the format: **#ECAM: <onoff>**
AT#ECAM=?	Test command returns the list of supported values for **<onoff>**

3.5.7.1.53. SMS Overflow - #SMOV

#SMOV - SMS Overflow	SELINT 0 / 1
AT#SMOV[=[<mode>]]	Set command enables/disables the SMS overflow signalling function. Parameter: **<mode>** 0 - disables SMS overflow signalling function(factory default) 1 - enables SMS overflow signalling function; when the maximum storage capacity has been reached, the following notification is sent:

#SMOV - SMS Overflow	SELINT 0 / 1
	#SMOV: <memo> **where <memo> is a string indicating the SMS storage that has reached maximum capacity:** **"SM" – SIM Memory** Note: issuing **AT#SMOV<CR>** is the same as issuing the Read command. Note: issuing **AT#SMOV=<CR>** is the same as issuing the command **AT#SMOV=0<CR>**.
AT#SMOV?	Read command reports whether the SMS overflow signalling function is currently enabled or not, in the format: **#SMOV: <mode>**
AT#SMOV=?	Test command returns the supported range of values of parameter **<mode>**.

#SMOV - SMS Overflow	SELINT 2
AT#SMOV=[<mode>]	Set command enables/disables the SMS overflow signalling function. Parameter: **<mode>** 0 - disables SMS overflow signalling function (factory default) 1 - enables SMS overflow signalling function; when the maximum storage capacity has been reached, the following network initiated notification is sent: **#SMOV: <memo>** **where <memo> is a string indicating the SMS storage that has reached maximum capacity:** **"SM" – SIM Memory**
AT#SMOV?	Read command reports whether the SMS overflow signalling function is currently enabled or not, in the format: **#SMOV: <mode>**
AT#SMOV=?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.1.54. Mailbox Numbers - #MBN

#MBN - Mailbox Numbers	SELINT 2
AT#MBN	Execution command returns the mailbox numbers stored on SIM, if this service is provided by the SIM. The response format is: **[#MBN: <index>,<number>,<type>[,<text>][,mboxtype][<CR><LF>**

#MBN - Mailbox Numbers	SELINT 2
	#MBN: <index>,<number>,<type>[,<text>][,mboxtype][…]]] where: **<index>** - record number **<number>** - string type mailbox number in the format **<type>** **<type>** - type of mailbox number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") **<text>** - the alphanumeric text associated to the number; used character set should be the one selected with command **+CSCS** **<mboxtype>** - the message waiting group type of the mailbox, if available: "VOICE" - voice "FAX" - fax "EMAIL" - electronic mail "OTHER" - other Note: if all queried locations are empty (but available), no information text lines will be returned.
AT#MBN=?	Test command returns the **OK** result code.

3.5.7.1.55. Message Waiting Indication - #MWI

#MWI - Message Waiting Indication	SELINT 2
AT#MWI=<enable>	Set command enables/disables the presentation of the **message waiting indicator** URC. Parameter: **<enable>** 0 - disable the presentation of the **#MWI** URC 1 - enable the presentation of the **#MWI** URC each time a new message waiting indicator is received from the network and, at startup, the presentation of the status of the **message waiting indicators**, as they are currently stored on SIM.. The URC format is: **#MWI: <status>,<indicator>[,<count>]** where: **<status>** 0 - clear: it has been deleted one of the messages related to the indicator **<indicator>**. 1 - set: there's a new waiting message related to the indicator **<indicator>** **<indicator>** 1 - either Line 1 (CPHS context) or Voice (3GPP context) 2 - Line 2 (CPHS context only)

#MWI - Message Waiting Indication	SELINT 2
	3 - Fax 4 - E-mail 5 - Other **<count>** - message counter: network information reporting the number of pending messages related to the message waiting indicator **<indicator>**. The presentation at startup of the **message waiting indicators** status, as they are currently stored on SIM, is as follows: **#MWI: <status>[,<indicator>[,<count>][<CR><LF>** **#MWI: <status>,<indicator>[,<count>][...]]]** where: **<status>** 0 - no waiting message indicator is currently set: if this the case no other information is reported 1 - there are waiting messages related to the message waiting indicator **<indicator>**. **<indicator>** 1 - either Line 1 (CPHS context) or Voice (3GPP context) 2 - Line 2 (CPHS context) 3 - Fax 4 - E-mail 5 - Other **<count>** - message counter: number of pending messages related to the message waiting indicator **<indicator>** as it is stored on SIM.
AT#MWI?	Read command reports wheter the presentation of the **message waiting indicator** URC is currently enabled or not, and the current status of the **message waiting indicators** as they are currently stored on SIM. The format is: **#MWI: <enable>,<status>[,<indicator>[,<count>][<CR><LF>** **#MWI: <enable>,<status>,<indicator>[,<count>][...]]]**
AT#MWI=?	Test command returns the range of available values for parameter **<enable>**.

3.5.7.1.56. Forward Message From Storage - #CMSFW

#CMSFW – Forward Message From Storage	SELINT 2
AT#CMSFW=<index>[,<da>[,<toda>]]	Execution command sends to the network a message that is already stored in the **<memw>** or **<mems>** storage (see **+CPMS**) at the location **<index>**, or a received message. Parameters: **<index>** - location value in the message storage **<memw>** of the message to send

	<da> - destination address, string type represented in the currently selected character set (see **+CSCS**). **<toda>** - type of destination address 129 - number in national format 145 - number in international format (contains the "+") If message is successfully sent to the network then the result is sent in the format: **#CMSFW: <mr>** where: **<mr>** - message reference number. If message sending fails for some reason, an error code is reported: **+CMS ERROR:<err>** Note: to store a message in the **<memw>** storage see command **+CMGW**. Note: parameter **<da>** is mandatory if the message to forward is a SMS-DELIVER. Note: SMS-STATUS-REPORT messages cannot be forwarded. Note: care must be taken to ensure that during the command execution, which may take several seconds, no other SIM interacting commands are issued.
AT#CMSFW=?	Test command returns **OK** result code.
Note	To avoid malfunctions is suggested to wait for the **# CMSFW: <mr>** or **+CMS ERROR: <err>** response before issuing further commands

3.5.7.1.57. Audio Codec - #CODEC

#CODEC - Audio Codec	**SELINT 0 / 1**
AT#CODEC[=<codec>]	Set command sets the audio codec mode. Parameter: **<codec>** 0 - all the codec modes are enabled (factory default) 1..31 - sum of integers each representing a specific codec mode: 1 - **FR**, full rate mode enabled 2 - **EFR**, enhanced full rate mode enabled 4 - **HR**, half rate mode enabled 8 - **AMR-FR**, AMR full rate mode enabled 16 - **AMR-HR**, AMR half rate mode enabled

#CODEC - Audio Codec	SELINT 0 / 1
	Note: the full rate mode is added by default to any setting in the SETUP message (as specified in ETSI 04.08), but the call drops if the network assigned codec mode has not been selected by the user. Note: the setting 0 is equivalent to the setting 31. Note: The codec setting is saved in the profile parameters. Note: if optional parameter **<codec>** is omitted the behaviour of Set command is the same as Read command.
AT#CODEC?	Read command returns current audio codec mode in the format: **#CODEC: <codec>**
AT#CODEC=?	Test command returns the range of available values for parameter **<codec>**
Example	AT#CODEC=14 OK *sets the codec modes HR (4), EFR (2) and AMR-FR (8)*

#CODEC - Audio Codec	SELINT 2
AT#CODEC= [<codec>]	Set command sets the audio codec mode. Parameter: **<codec>** 0 - all the codec modes are enabled (factory default) 1..31 - sum of integers each representing a specific codec mode: 1 - **FR**, full rate mode enabled **(This is the only option available for SW 13.00.xxx)** 2 - **EFR**, enhanced full rate mode enabled 4 - **HR**, half rate mode enabled 8 - **AMR-FR**, AMR full rate mode enabled 16 - **AMR-HR**, AMR half rate mode enabled Note: the full rate mode is added by default to any setting in the SETUP message (as specified in ETSI 04.08), but the call drops if the network assigned codec mode has not been selected by the user. Note: the setting 0 is equivalent to the setting 31. Note: The codec setting is saved in the profile parameters.

#CODEC - Audio Codec	SELINT 2
AT#CODEC?	Read command returns current audio codec mode in the format: **#CODEC: <codec>**
AT#CODEC=?	Test command returns the range of available values for parameter **<codec>**
Example	AT#CODEC=14 OK *sets the codec modes HR (4), EFR (2) and AMR-FR (8)*

3.5.7.1.58. Network Timezone - #NITZ

#NITZ - Network Timezone	SELINT 0 / 1
AT#NITZ[= [<val> [,<mode>]]]	Set command enables/disables automatic date/time updating and Network Timezone unsolicited indication. Date and time information can be sent by the network after GSM registration or after GPRS attach. Parameters: **<val>** 0 - disables automatic set (factory default) 1 - enables automatic set **<mode>** 0 - disables unsolicited message (factory default) 1 - enables unsolicited message; after date and time updating the following unsolicited indication is sent: **#NITZ: "yy/MM/dd,hh:mm:ss"** where: **yy** - year **MM** - month (in digits) **dd** - day **hh** - hour **mm** - minute **ss** - second Note: issuing **AT#NITZ<CR>** is the same as issuing the Read command. Note: issuing **AT#NITZ=<CR>** is the same as issuing the command **AT#NITZ=0<CR>**.
AT#NITZ?	Read command reports whether automatic date/time updating is currently enabled or not, and whether Network Timezone unsolicited indication is enabled or not, in the format: **#NITZ: <val>,<mode>**

#NITZ - Network Timezone	SELINT 0 / 1
AT#NITZ=?	Test command returns supported values of parameters **<val>** and **<mode>**.

#NITZ - Network Timezone	SELINT 2
AT#NITZ= **[<val>** **[,<mode>]]**	Set command enables/disables (a) automatic date/time updating, (b) Full Network Name applying and (c) **#NITZ** URC; moreover it permits to change the **#NITZ** URC format. Date and time information can be sent by the network after GSM registration or after GPRS attach. Parameters: **<val>** 0 - disables (a) automatic data/time updating, (b) Full Network Name applying and (c) **#NITZ** URC; moreover it sets the **#NITZ** URC *'basic'* format (see **<datetime>** below) (factory default for all products except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1..15 - as a sum of: 1 - enables automatic date/time updating 2 - enables Full Network Name applying 4 - it sets the **#NITZ** URC *'extended'* format (see **<datetime>** below) 8 - it sets the **#NITZ** URC *'extended'* format with Daylight Saving Time (DST) support (see **<datetime>** below) (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS: 7) **<mode>** 0 - disables **#NITZ** URC (factory default) 1 - enables **#NITZ** URC; after date and time updating the following unsolicited indication is sent: **#NITZ: <datetime>** where: **<datetime>** - string whose format depends on subparameter **<val>** **"yy/MM/dd,hh:mm:ss"** - *'basic'* format, if **<val>** is in (0..3) **"yy/MM/dd,hh:mm:ss±zz"** - *'extended'* format, if **<val>** is in (4..7) **"yy/MM/dd,hh:mm:ss±zz,d"** - *'extended'* format with DST support, if **<val>** is in (8..15) where: **yy** - year **MM** - month (in digits) **dd** - day **hh** - hour **mm** - minute

#NITZ - Network Timezone	SELINT 2
	ss - second **zz** - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory, range is -47..+48) **d** – number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-3. Note: If the DST information isn't sent by the network, then the **<datetime>** parameter has the format **"yy/MM/dd,hh:mm:ss±zz"**
AT#NITZ?	Read command reports whether (a) automatic date/time updating, (b) Full Network Name applying, (c) **#NITZ** URC (as well as its format) are currently enabled or not, in the format: **#NITZ: <val>,<mode>**
AT#NITZ=?	Test command returns supported values of parameters **<val>** and **<mode>**.

3.5.7.1.59. Clock management - #CCLK

#CCLK - Clock Management	SELINT 2
AT#CCLK=<time>	Set command sets the real-time clock of the **ME**. Parameter: **<time>** - current time as quoted string in the format: **"yy/MM/dd,hh:mm:ss±zz,d"** **yy** - year (two last digits are mandatory), range is 00..99 **MM** - month (two last digits are mandatory), range is 01..12 **dd** - day (two last digits are mandatory) The range for dd(day) depends either on the month and on the year it refers to. Available ranges are: (01..28) (01..29) (01..30) (01..31) Trying to enter an out of range value will raise an error **hh** - hour (two last digits are mandatory), range is 00..23 **mm** - minute (two last digits are mandatory), range is 00..59 **ss** - seconds (two last digits are mandatory), range is 00..59 **±zz** - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48 **d** – number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-2.
AT#CCLK?	Read command returns the current setting of the real-time clock, in the format **<time>**. Note: if the time is set by the network but the DST information is missing, or the

#CCLK - Clock Management		SELINT 2
	time is set by +CCLK command, then the **<time>** format is: **"yy/MM/dd,hh:mm:ss±zz"**	
AT#CCLK=?	Test command returns the **OK** result code.	
Example	AT#CCLK="02/09/07,22:30:00+04,1" OK AT#CCLK? #CCLK: "02/09/07,22:30:25+04,1" OK	

3.5.7.1.60. #NTP – Network Time

#NTP – calculate and update date and time		SELINT 2
AT#NTP= <NTPaddr>, <NTPPort>, <update_module_clock>, <timeout>[,<TimeZone>]	This command permits to calculate and update date and time through NTP protocol(RFC2030), sending a request to a NTP server. Parameters: **<NTPaddr>** - address of the NTP server, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx.xxx" - any host name to be solved with a DNS query **<NTPPort>** - NTP server port to contact 1..65535 **<update_module_clock>** 0 - no update module clock 1 – update module clock **<timeout>** - waiting timeout for server response in seconds 1..10 **<TimeZone>** - Time Zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT), range is -47..+48; default is 0. Note: the Time Zone is applied directly in the Date and Time received by the NTP Server, that is, by definition, GMT+0	
AT#NTP=?	Test command reports the supported range of values for parameters **<NTPaddr>,<NTPPort>,<update_module_clock>,<timeout>** and **<TimeZone>**	
Example	at#ntp="ntp1.inrim.it",123,1,2,4 #NTP: 12/01/27,14:42:38+04	

	OK …. at+cclk? +CCLK: "12/01/27,14:42:39+04" OK

3.5.7.1.61. Enhanced Network Selection - #ENS

#ENS - Enhanced Network Selection	**SELINT 2**
AT#ENS=[<mode>]	Set command is used to activate the ENS functionality. Parameter: **<mode>** 0 - disable ENS functionality (default) 1 - enable ENS functionality; if **AT#ENS=1** has been issued, the following values will be automatically set: ➢ at every next power-up a Band GSM 850 and PCS enabled (**AT#BND=3**) b SIM Application Toolkit enabled on user interface 0 if not previously enabled on a different user interface (**AT#STIA=2**) ➢ just at first next power-up a Automatic Band Selection enabled (**AT#AUTOBND=2**) only if the previous setting was equal to AT#AUTOBND=0 b PLMN list not fixed (**AT#PLMNMODE=1**). Note: the new setting will be available just at first next power-up. Note: If 'Four Band' Automatic Band Selection has been activated (**AT#AUTOBND=2**), at power-up the value returned by **AT#BND?** could be different from 3 when ENS functionality is enabled. Note: on version 10.0x.xx4 the set command AT#ENS=1 doesn' t enable the SIM Application Toolkit if the command AT#ENAUSIM? returns 1.
AT#ENS?	Read command reports whether the ENS functionality is currently enabled or not, in the format: **#ENS: <mode>** where: **<mode>** as above
AT#ENS=?	Test command reports the available range of values for parameter **<mode>**.
Reference	Cingular Wireless LLC Requirement

3.5.7.1.62. Select Band - #BND

#BND - Select Band	**SELINT 0 / 1**

#BND - Select Band	SELINT 0 / 1
AT#BND[= [<band>]]	Set command selects the current band. Parameter **<band>**: 0 - GSM 900MHz + DCS 1800MHz 1 - GSM 900MHz + PCS 1900MHz 2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules) 3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules) Note: This setting is maintained even after power off. Note: issuing **AT#BND<CR>** is the same as issuing the Read command. Note: issuing **AT#BND=<CR>** is the same as issuing the command **AT#BND=0<CR>**.
AT#BND?	Read command returns the current selected band in the format: **#BND: <band>**
AT#BND=?	Test command returns the supported range of values of parameter **<band>**. Note: the range of values differs between triband modules and quadric-band modules.
Note:	Not available for Dual-Band products.

#BND - Select Band	SELINT 2
AT#BND= [<band>]	Set command selects the current band. Parameter **<band>**: 0 - GSM 900MHz + DCS 1800MHz 1 - GSM 900MHz + PCS 1900MHz; this value is not available if the ENS functionality has been activated (see **#ENS**) 2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules); this value is not available if the ENS functionality has been activated (see **#ENS**) 3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules) Note: This setting is maintained even after power off. Note: if the normal automatic band selection is enabled (**AT#AUTOBND=1**) then the last **#BND** settings can automatically change at power-up; then you can normally use the command. Note: if the 'four bands' automatic band selection is enabled (**AT#AUTOBND=2**) then you can issue **AT#BND=<band>** but it will have no functional effect;

#BND - Select Band	SELINT 2
	nevertheless every following read command **AT#BND?** will report that setting.
AT#BND?	Read command returns the current selected band in the format: **#BND: <band>**
AT#BND=?	Test command returns the supported range of values of parameter **<band>**. Note: the range of values differs between tri-band modules and quadri-band modules.
Note:	Not available for Dual-Band products.

3.5.7.1.63. Automatic Band Selection - #AUTOBND

#AUTOBND - Automatic Band Selection	SELINT 0 / 1
AT#AUTOBND[= <value>]	Set command enables/disables the automatic band selection at power-on. Parameter: **<value>**: 0 - disables automatic band selection at power-on (default for all products) 1 - enables automatic band selection at power-on; **+COPS=0** is necessary condition to effectively have automatic band selection at next power-on; the automatic band selection stops as soon as a GSM cell is found. Note: if automatic band selection is enabled the band changes every about 90 seconds through available bands until a GSM cell is found. Note: if parameter **<value>** is omitted the behaviour of Set command is the same as Read command.
AT#AUTOBND?	Read command returns whether the automatic band selection is enabled or not in the format: **#AUTOBND: <value>**
AT#AUTOBND=?	Test command returns the range of supported values for parameter **<value>**.

#AUTOBND - Automatic Band Selection	SELINT 2
AT#AUTOBND= [<value>]	Set command enables/disables the automatic band selection at power-on. Parameter: **<value>**: 0 - disables automatic band selection at ***next*** power-up (default for all products, except GE865-QUAD, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3, GL865-QUAD-V3 and GE910-GNSS) 1 - enables automatic band selection at ***next*** power-up; the automatic band selection stops as soon as a GSM cell is found (deprecated). 2 –enables automatic band selection in four bands (at 850/1900 and 900/1800);

#AUTOBND - Automatic Band Selection	SELINT 2
	differently from previous settings it takes ***immediate*** effect (default for GE865-QUAD, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3, GL865-QUAD-V3 and GE910-GNSS) Note: necessary condition to *effectively* have automatic band selection at next power-up (due to either **AT#AUTOBND=1** or **AT#AUTOBND=2**) is that **AT+COPS=0** has to be previously issued Note: if automatic band selection is enabled **(AT#AUTOBND=1)** the band changes every about 90 seconds through available bands until a GSM cell is found. Note: if the current setting is equal to **AT#AUTOBND=0** and we're issuing **AT#ENS=1**, at ***first next*** power-up after the ENS functionality has been activated (see **#ENS**) the automatic band selection (**AT#AUTOBND=2**) is enabled.
AT#AUTOBND?	Read command returns whether the automatic band selection is enabled or not in the form: **#AUTOBND: <value>**
AT#AUTOBND=?	Test command returns the range of supported values for parameter **<value>**.

3.5.7.1.64. Lock to single band - #BNDLOCK

#BNDLOCK – Lock to single band	SELINT 2
AT#BNDLOCK=<LockedBand>	This command allows to set the single band the device must be locked to, selectable within those allowed for the specific product. Parameters: **<LockedBand>:** 0 - disables band locking (factory default); 1 - enables band locking on GSM 900MHz; 2 - enables band locking on DCS 1800MHz; 3 - enables band locking on GSM 850MHz; 4 - enables band locking on PCS 1900MHz. Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance. Note: the new setting takes effect after a new registration procedure to the network. For this reason it is strongly recommended a power cycle (power-off and power-on the device) after new setting. Another possibility is to keep the device on and to force a new registration to the network as in the following example: - set AT+COPS=1,2,00001 (manual registration to not existing real network)

	- wait for +CREG: 0,3 - set AT+COPS=0,0 (for automatic registration) or set AT+COPS=1,0,... (for manual registration) Note: in case of a four bands device with current setting **AT#AUTOBND=0** there might be conflicts between **AT#BND** and **AT#BNDLOCK** stored values. It is user responsibility to set proper values avoiding conflicts (no cross check is available between the two commands).
AT#BNDLOCK?	Read command reports the currently stored parameter **<LockedBand>** in the format: **#BNDLOCK: <LockedBand>**
AT#BNDLOCK=?	Test command reports the supported range of values for parameter **<LockedBand>** according to specific product.

3.5.7.1.65. Lock to single BCCH ARFCN – #BCCHLOCK

#BCCHLOCK – Lock to single BCCH ARFCN	**SELINT 2**
AT#BCCHLOCK=<LockedBcch>	This command allows to set the single BCCH ARFCN the device must be locked to, selectable within those allowed for the specific product. Parameters: **<LockedBcch>:** 1024 - disables BCCH locking (factory default); 0-124, 975-1023 - enables BCCH locking on GSM 900MHz; 512-885 - enables BCCH locking on DCS 1800MHz; 128-251 - enables BCCH locking on GSM 850MHz; 512-810 - enables BCCH locking on PCS 1900MHz. Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance. Note: if selected locked BCCH is not available, the module will be out of GSM/GPRS network service even for emergency calls and will not select an alternative BCCH. Note: if selected locked BCCH is available but the module is not allowed to register to the corresponding PLMN, the module will be able to perform only emergency calls and will not select an alternative BCCH. Note: if selected locked BCCH is available, the module, in idle and in

	GPRS data transfer, will not perform reselection to another cell. Note: if selected locked BCCH is available, the module, in GSM data transfer (voice call, data call, sms), will not perform handover to another cell. Note: in case of a four bands device with current setting **AT#AUTOBND=0** there might be conflicts between **AT#BND**, **AT#BNDLOCK** and **AT#BCCHLOCK** stored values; in case of a two bands device there might be conflicts between **AT#BNDLOCK** and **AT#BCCHLOCK** stored values. It is user responsibility to set proper values avoiding conflicts (no cross check is available between the commands).
AT#BCCHLOCK?	Read command reports the currently stored parameter **<LockedBcch>** in the format: **#BCCHLOCK: <LockedBcch>**
AT#BCCHLOCK=?	Test command reports the supported range of values for parameter **<LockedBcch>** according to specific product.

3.5.7.1.66. Network Scan Timer - #NWSCANTMR

#NWSCANTMR - Network Scan Timer	**SELINT 2**
AT#NWSCANTMR=<tmr>	Set command sets the Network Scan Timer that is used by the module to schedule the next network search when it is without network coverage (no signal). Parameter: **<tmr>** - timer value in units of seconds 5 3600 - time in seconds (default 5 secs.)
AT#NWSCANTMR	Execution command reports time, in seconds, when the next scan activity will be executed. The format is: **#NWSCANTMREXP: <time>** Note: if **<time>** is zero it means that the timer is not running
AT#NWSCANTMR?	Read command reports the current parameter setting for **#NWSCANTMR** command in the format: **#NWSCANTMR: <tmr>**
AT#NWSCANTMR=?	Test command reports the supported range of values for parameter **<tmr>**
Note	How much time it takes to execute the network scan depends either on how much bands have been selected and on network configuration (mean value is 5 seconds)

3.5.7.1.67. Enable Network Friendly Mode - #NFM

#NFM – Enable Network Friendly Mode	SELINT 2
AT#NFM=[<NFMEnable>[,<STEnable>]]	This command enables/disables Network Friendly Mode and Start Time. Parameters: **<NFMEnable>** 0 – disable Network Friendly Mode (factory default); 1 – enable Network Friendly Mode. **<STEnable>** 0 – disable Start Time (factory default); 1 – enable Start Time. Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance. ***Network Friendly Mode.*** NFM applies only if enabled (**<NFMEnable>** is 1). NFM applies to the following services: 1. GSM registration (Location Updating); 2. GPRS registration (Attach, Routing Area Updating); 3. PDP context activation; 4. SMS mobile originated. If NFM is not active for a service the corresponding iteration counter is 0. When NFM is activated for a service the corresponding iteration counter is increased up to a maximum value of 7. The values of each NFM service iteration counter are stored in NVM in case they need to be applied at next power cycle. GSM registration. If GSM registration (Location Updating) is rejected by the Network with one of the following causes 2: IMSI unknown in HLR 3: Illegal MS 6: Illegal ME NFM will be activated for GSM registration service, current GSM service iteration counter will be increased and will take effect at next power on. At next power cycle the NFM timer for GSM registration service will be started and a GSM registration will be allowed only at NFM timer expiry. If GSM registration (Location Updating) is rejected by the Network with one of the following causes 5: IMEI not accepted 17: Network failure 22: Congestion 34: Service option temporarily out of order for the 4 attempts specified by ETSI/3GPP, NFM will be activated for GSM registration service, current GSM service iteration counter will be increased, the NFM timer for GSM registration service will be started and a GSM registration will be allowed only at NFM timer expiry. At next

	power cycle the NFM timer for GSM registration service will be started and a GSM registration will be allowed only at NFM timer expiry. If NFM is activated for GSM registration service and NFM timer is not expired ETSI/3GPP T3212 timer will be ignored. If NFM is activated for GSM registration service and NFM timer is not expired ETSI/3GPP search for another PLMN will be ignored. If GSM registration (Location Updating) is accepted by the Network GSM service iteration counter will be reset. GPRS registration. If GPRS registration (Attach, Routing Area Updating) is rejected by the Network with one of the following causes 3: Illegal MS 6: Illegal ME 7: GPRS services not allowed 8: GPRS services and non-GPRS services not allowed NFM will be activated for GPRS registration service, current GPRS service iteration counter will be increased and will take effect at next power on. At next power cycle the NFM timer for GPRS registration service will be started and a GPRS registration will be allowed only at NFM timer expiry. If GPRS registration (Attach, Routing Area Updating) is rejected by the Network with one of the following causes 9: MS identity cannot be derived by the network 16: MSC temporarily not reachable 17: Network failure 22: Congestion for the 5 attempts specified by ETSI/3GPP, NFM will be activated for GPRS registration service, current GPRS service iteration counter will be increased, the NFM timer for GPRS registration service will be started and a GPRS registration will be allowed only at NFM timer expiry. At next power cycle the NFM timer for GPRS registration service will be started and a GPRS registration will be allowed only at NFM timer expiry. If NFM is activated for GPRS registration service and NFM timer is not expired ETSI/3GPP T3302 timer will be ignored. If NFM is activated for GPRS registration service and NFM timer is not expired ETSI/3GPP attempt in NOM1 for GSM registration will be ignored. If GPRS registration (Attach, Routing Area Updating) is accepted by the Network GPRS service iteration counter will be reset. PDP context activation. If PDP context activation is rejected by the Network with one of the following causes 8: Operator Determined Barring 26: insufficient resources 27: missing or unknown APN 28: unknown PDP address or PDP type 29: user authentication failed 30: activation rejected by GGSN

	31: activation rejected, unspecified 32: service option not supported 33: requested service option not subscribed 34: service option temporarily out of order 35: NSAPI already used 38: network failure 39: reactivation requested NFM will be activated for PDP context activation service, current PDP service iteration counter will be increased, the NFM timer for PDP context activation service will be started and a PDP context activation will be allowed only at NFM timer expiry. At next power cycle the NFM timer for PDP context activation service will be started and a PDP context activation will be allowed only at NFM timer expiry. If PDP context activation is accepted by the Network PDP service iteration counter will be reset. SMS mobile originated. If SMS mobile originated is rejected by the Network with one of the following causes 8: Operator Determined Barring 10: cell barred 21: short message transfer reject 22: destination out of service 28: unidentified subscriber 29: facility reject 30: unknown subscriber 38: network out of order 41: temporary failure 42: congestion 47 resource unavailable 50 requested facility not subscribed 69: requested facility not implemented 81: invalid short message transfer reference value NFM will be activated for SMS mobile originated service, current SMS service iteration counter will be increased, the NFM timer for SMS mobile originated service will be started and a SMS mobile originated will be allowed only at NFM timer expiry. At next power cycle the NFM timer for SMS mobile originated service will be started and a SMS mobile originated will be allowed only at NFM timer expiry. If SMS mobile originated is accepted by the Network SMS service iteration counter will be reset. ***Start Time.*** ST applies only if enabled (**<STEnable>** is 1). If ST is enabled the ST timer will be started at every power cycle and the registration procedures will be allowed only at ST timer expiry.
AT#NFM?	Read command reports the currently stored parameters **<NFMEnable>** and **<STEnable>** in the format:

	#NFM: <NFMEnable>,<STEnable>
AT#NFM=?	Test command reports the supported range of values for parameters **<NFMEnable>** and **<STEnable>**.

3.5.7.1.68. Configure Network Friendly Mode - #NFMC

#NFMC – Configure Network Friendly Mode	**SELINT 2**
AT#NFMC=[<NFMPar1>[,<NFMPar2>[,<NFMPar3>[,<NFMPar4>[,<NFMPar5>[,<NFMPar6>[,<NFMPar7>[,<STPar>]]]]]]]	This command configures Network Friendly Mode time parameters and Start Time time parameter. Parameters: **<NFMPar1>** - NFM iteration counter 1 time interval in seconds 1-15360 – (factory default is 60); **<NFMPar2>** - NFM iteration counter 2 time interval in seconds 1-15360 – (factory default is 120); **<NFMPar3>** - NFM iteration counter 3 time interval in seconds 1-15360 – (factory default is 240); **<NFMPar4>** - NFM iteration counter 4 time interval in seconds 1-15360 – (factory default is 480); **<NFMPar5>** - NFM iteration counter 5 time interval in seconds 1-15360 – (factory default is 960); **<NFMPar6>** - NFM iteration counter 6 time interval in seconds 1-15360 – (factory default is 1920); **<NFMPar7>** - NFM iteration counter 7 time interval in seconds 1-15360 – (factory default is 3840); **<STPar>** - ST time interval in seconds 1-15360 – (factory default is 60); Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance. ***Network Friendly Mode.*** If **NFMPar[]** is the array containing the seven parameters **<NFMPar*i*>** **NFMPar[<NFMPar1>,<NFMPar2>,<NFMPar3>,<NFMPar4>,<NFMPar5>,<NFMPar6>,<NFMPar7>]** then the value of the current NFM timer is calculated depending on current iteration counter **i** with the following formula **NFMTimer = NFMPar[i] + (IMSI % NFMPar[i])** Only last 9 IMSI digits are used in this formula to fit 32 bit integer. ***Start Time.*** If **STPar** is the number contained in the parameter **<STPar>** then the value of the ST timer is calculated with the following formula

	STTimer = 1 + (IMSI % STPar) Only last 9 IMSI digits are used in this formula to fit 32 bit integer.
AT#NFMC?	Read command reports the currently stored parameters **<NFMPar1>**, **<NFMPar2>**, **<NFMPar3>**, **<NFMPar4>**, **<NFMPar5>**, **<NFMPar6>**, **<NFMPar7>** and **<STPar>** in the format: **#NFM: <NFMPar1>,<NFMPar2>,<NFMPar3>,<NFMPar4>,<NFMPar5>,<NFMPar6>,<NFMPar7>,<STPar>**
AT#NFMC=?	Test command reports the supported range of values for parameters **<NFMPar1>**, **<NFMPar2>**, **<NFMPar3>**, **<NFMPar4>**, **<NFMPar5>**, **<NFMPar6>**, **<NFMPar7>** and **<STPar>**.

3.5.7.1.69. Reset and report status of Network friendly Mode - #NFMS

#NFMS – Reset Network Friendly Mode and report status of Network friendly Mode	**SELINT 2**
AT#NFMS=<NFMSMode>[,<ServiceNumber>]	This command allows to reset Network Friendly Mode current iteration counter and to report Network Friendly Mode current iteration counter for each service supported by Network Friendly Mode. Parameters: **<NFMSMode>** 0 – reset Network Friendly Mode current iteration counter for specific service; 1 – report Network Friendly Mode status for all services supported by Network Friendly Mode. **<ServiceNumber>** 1 – GSM registration (Location Updating); 2 – GPRS registration (Attach, Routing Area Updating); 3 – PDP context activation; 4 – SMS mobile originated. Note: the parameter **<ServiceNumber>** must be present if **<NFMSMode>** value is 0 and must not be present if **<NFMSMode>** value is 1. If **<NFMSMode>** value is 1 then the Network Friendly Mode status will be reported in the format **#NFMS: <ServiceNumber1>,<NFMActive>,<NFMpar>,<NFMTime>** **#NFMS: <ServiceNumber2>,<NFMActive>,<NFMpar>,<NFMTime>** **#NFMS: <ServiceNumber3>,<NFMActive>,<NFMpar>,<NFMTime>** **#NFMS: <ServiceNumber4>,<NFMActive>,<NFMpar>,<NFMTime>**

	OK where **<ServiceNumber*i*>** 1 – GSM registration (Location Updating); 2 – GPRS registration (Attach, Routing Area Updating); 3 – PDP context activation; 4 – SMS mobile originated. **<NFMActive>** 0 – NFM not active for corresponding service; if **<NFMActive>** is 0 the corresponding service is available; 1 – NFM active for corresponding service. **<NFMpar>** - NFM current iteration counter time interval in seconds for corresponding service. **<NFMTime>** - NFM current remaining time for corresponding service; if **<NFMActive>** is 0 then **<NFMTime>** is 0 and the corresponding service is available; if **<NFMActive>** is 1 and **<NFMTime>** is not 0 the corresponding service is not available; if **<NFMActive>** is 1 and **<NFMTime>** is 0 the corresponding service is available and another try is allowed;
AT#NFMS=?	Test command reports the supported range of values for parameters **<NFMSMode>** and **<ServiceNumber>**.
Examples	AT#NFMS=0,1 OK Reset NFM iteration counter for GSM registration service. AT#NFMS=0 ERROR Not allowed. AT#NFMS=1 #NFMS: 1,0,0,0 #NFMS: 2,1,60,46 #NFMS: 3,0,0,0 #NFMS: 4,0,0,0 OK NFM not active for GSM registration service. NFM active for GPRS registration service, current iteration time interval 60 s, time to expiry of current iteration timer 46 s, GPRS registration service not available. NFM not active for PDP context activation service. NFM not active for SMS mobile originated service. AT#NFMS=1 #NFMS: 1,0,0,0 #NFMS: 2,0,0,0 #NFMS: 3,1,120,0 #NFMS: 4,0,0,0

	OK NFM not active for GSM registration service. NFM not active for GPRS registration service. NFM active for PDP context activation service, current iteration time interval 120 s, current iteration timer expired, PDP context activation service available, another try is allowed. NFM not active for SMS mobile originated service. AT#NFMS=1,2 ERROR Not allowed.

3.5.7.1.70. IMSI Catcher detection enable - #IMCDEN

#IMCDEN – IMSI Catcher detection enable	**SELINT 2**
AT#IMCDEN=<mode>[,<UNUSED_1>[,<UNUSED_2>[,<UNUSED_3>[,<UNUSED_4>]]]]	Set command enables/disables an unsolicited indication in the ME that can help to detect potential IMSI catchers. Parameter: **<mode>** - type of notification 0 - disabled (factory default) 1 - enabled; the ME informs at every potentially dangerous network status change through the following unsolicited indication: **#IMCD: <status>** where: **<status>** - current potentially dangerous network status 0 – Location area update of any type; 1 – IMSI sent to the network 2 – Rejection error due to cause #15 (No Suitable Cells In Location Area). NOTE: Individual occurrence of status 0 or status 2 should not represent a risk. Occurrence of status 1 is always potentially dangerous, especially when it is preceded by status 0 and followed by status 2 in a short time.
AT#IMCDEN?	Read command returns the current setting in the format: **#IMCDEN**: **<mode>,0,0,0,0<CR><LF>**
AT#IMCDEN=?	Test command returns the range of supported values.

3.5.7.1.71. Skip Escape Sequence - #SKIPESC

#SKIPESC - Skip Escape Sequence	**SELINT 0 / 1**
AT#SKIPESC[=[<mode>]]	Set command enables/disables skipping the escape sequence +++ while transmitting during a data connection.

#SKIPESC - Skip Escape Sequence	SELINT 0 / 1
	Parameter: **<mode>** 0 - doesn't skip the escape sequence; its transmission is enabled (factory default). 1 - skips the escape sequence; its transmission is not enabled. Note: in case of an FTP connection, the escape sequence is not transmitted, regardless of the command setting. Note: issuing **AT#SKIPESC<CR>** is the same as issuing the Read command. Note: issuing **AT#SKIPESC=<CR>** is the same as issuing the command **AT#SKIPESC=0<CR>**.
AT#SKIPESC?	Read command reports whether escape sequence skipping is currently enabled or not, in the format: **#SKIPESC: <mode>**
AT#SKIPESC=?	Test command reports supported range of values for parameter **<mode>**.

#SKIPESC - Skip Escape Sequence	SELINT 2
AT#SKIPESC=[<mode>]	Set command enables/disables skipping the escape sequence +++ while transmitting during a data connection. Parameter: **<mode>** 0 - doesn't skip the escape sequence; its transmission is enabled (factory default). 1 - skips the escape sequence; its transmission is not enabled. Note: in case of an FTP connection, the escape sequence is not transmitted, regardless of the command setting.
AT#SKIPESC?	Read command reports whether escape sequence skipping is currently enabled or not, in the format: **#SKIPESC: <mode>**
AT#SKIPESC=?	Test command reports supported range of values for parameter **<mode>**.

3.5.7.1.72. Escape Sequence Guard Time - #E2ESC

#E2ESC - Escape Sequence Guard Time	SELINT 0 / 1

#E2ESC - Escape Sequence Guard Time	SELINT 0 / 1
AT#E2ESC[=[<gt>]]	Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode). Parameter: **<gt>** 0 - guard time defined by command S12 (factory default) 1..10 - guard time in seconds Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with **S12**. Note: issuing **AT#E2ESC<CR>** is the same as issuing the Read command. Note: issuing **AT#E2ESC=<CR>** returns the **OK** result code.
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in the format: **#E2ESC: <gt>**
AT#E2ESC=?	Test command returns the **OK** result code.

#E2ESC - Escape Sequence Guard Time	SELINT 2
AT#E2ESC=[<gt>]	Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode). Parameter: **<gt>** 0 - guard time defined by command S12 (factory default) 1..10 - guard time in seconds Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with **S12**.
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in the format: **#E2ESC: <gt>**
AT#E2ESC=?	Test command returns the range of supported values for parameter <gt>.
AT#E2ESC=[<gt>]	Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode). Parameter: **<gt>** 0 - guard time defined by command S12 (factory default) 1..10 - guard time in seconds Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with **S12**.

3.5.7.1.73. PPP-GPRS Connection Authentication Type - #GAUTH

#GAUTH - PPP-GPRS Connection Authentication Type	SELINT 0 / 1
AT#GAUTH[=<type>]	Set command sets the authentication type either for PPP-GPRS and PPP-GSM connections. Parameter **<type>** 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication Note: if parameter **<type>** is omitted the behaviour of Set command is the same as Read command.
AT#GAUTH?	Read command reports the current PPP-GPRS connection authentication type, in the format: **#GAUTH: <type>**
AT#GAUTH=?	Test command returns the range of supported values for parameter **<type>**.

#GAUTH - PPP-GPRS Connection Authentication Type	SELINT 2
AT#GAUTH=[<type>]	Set command sets the authentication type either for PPP-GPRS and PPP-GSM connections. Parameter **<type>** 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication 3 - automatic (PAP and CHAP) Note: value is automatically saved in NVM
AT#GAUTH?	Read command reports the current PPP-GPRS connection authentication type, in the format: **#GAUTH: <type>**
AT#GAUTH=?	Test command returns the range of supported values for parameter **<type>**.

3.5.7.1.74. PPP-GPRS Parameters Configuration - #GPPPCFG

#GPPPCFG - PPP-GPRS Parameters Configuration	SELINT 2
AT#GPPPCFG=<hostIPaddress>[,<LCPtimeout>	Set command sets three parameters for a PPP-GPRS connection. Parameters:

#GPPPCFG - PPP-GPRS Parameters Configuration	SELINT 2
[,<PPPmode>]]	**<hostIPaddress> - Host IP Address** that is assigned to the PPP server side (the host application); Sstring type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx. **<LCPtimeout>** - LCP response timeout value in 100ms units 10..600 - hundreds of ms (factory default is 25) **<PPPmode>** - PPP mode (factory default is 2) 0 - passive mode the module waits the first message coming from the remote application (e.g. LCP Conf Req) before starting the LCP negotiation 1 - active mode, the module starts autonomously the LCP negotiation immediately after the CONNECT message 2 - passive mode, the module waits the first message coming from the remote application (e.g. LCP Conf Req) before starting the LCP negotiation; LCP termination is performed by the module 3 - active mode, the module starts autonomously the LCP negotiation immediately after the CONNECT message; LCP termination is performed by the module Note: values are automatically saved in NVM Note: if **<hostIPaddress>="000.000.000.000"** (factory default) the **Host IP Address** assigned to the host application is the previous remote IP Address obtained by the Network.
AT# GPPPCFG?	Read command reports the current PPP-GPRS connection parameters in the format: **#GPPPCFG: <hostIPaddress>,<LCPtimeout>,<PPPmode>**
AT# GPPPCFG=?	Test command returns the range of supported values for parameter **<LCPtimeout>** and **<PPPmode>**, in the format: **#GPPPCFG: (10-600),(0-3)**

3.5.7.1.75. Enables/disables PPP compression - #GPPPCFGEXT

#GPPPCFGEXT – enables/disables PPP compression	SELINT 2
AT#GPPPCFGEXT =<Comp>[,<unused_A>[,<unused_B>[,<unused_C>]]]	Set command enables/disables the use of protocol and address/control field compression in PPP. Parameter: **< Comp >** 0 – disables compression 1 – enables compression (default) Note: value is automatically saved in NVM

#GPPPCFGEXT – enables/disables PPP compression	SELINT 2
AT#GPPPCFGEXT?	Read command returns the current configuration parameters value: **#GPPPCFGEXT: < Comp >,0,0,0<CR><LF>**
AT#GPPPCFGEXT=?	Test command returns the range of supported values for all the parameters.

3.5.7.1.76. Tune PDP parameters - #EQUPDP

#EQUPDP – tune PDP params	SELINT 2
AT#EQUPDP=<delay>,<retries>[,<abort>]	This command allows to tune PDP procedure **<delay>** to set PDP retry timer 5,10,15,20,25,30 sec (30s is the default value) **<retries>** - to set number of PDP retries 0-4 (4 is the default value) **<abort>** - abort PDP procedure when PPP is closed by the application 0,1 (1 is the default value) Note: all params are saved in NVM
AT#EQUPDP?	Read command reports the currently selected **<delay>**,**<retries>** and **<abort>** params in the format: **#EQUPDP: <delay>,<retries>,<abort>**
AT#EQUPDP=?	Test command returns the range of supported values for all the parameters: #EQUPDP: (5,10,15,20,25,30),(0-4),(0,1)

3.5.7.1.77. RTC Status - #RTCSTAT

#RTCSTAT - RTC Status	SELINT 0 / 1
AT#RTCSTAT[=<status>]	Set command resets the RTC status flag. Parameter: **<status>** 0 - Set RTC Status to **RTC HW OK** Note: the initial value of RTC status flag is **RTC HW Error** and it doesn't change until a command **AT#RTCSTAT=0** is issued.

#RTCSTAT - RTC Status	SELINT 0 / 1
	Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to **1**. It doesn't change until command **AT#RTCSTAT=0** is issued. Note: if parameter **<status>** is omitted the behaviour of Set command is the same as Read command.
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format: **#RTCSTAT: <status>**
AT#RTCSTAT=?	Test command returns the range of supported values for parameter **<status>**

#RTCSTAT - RTC Status	SELINT 2
AT#RTCSTAT=[<status>]	Set command resets the RTC status flag. Parameter: **<status>** 0 - Set RTC Status to **RTC HW OK** Note: the initial value of RTC status flag is **RTC HW Error** and it doesn't change until a command **AT#RTCSTAT=0** is issued. Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to **1**. It doesn't change until command **AT#RTCSTAT=0** is issued.
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format: **#RTCSTAT: <status>**
AT#RTCSTAT=?	Test command returns the range of supported values for parameter **<status>**

3.5.7.1.78. GSM Antenna Detection - #GSMAD

#GSMAD - GSM Antenna Detection	SELINT 2
AT#GSMAD=<mod>,[<urcmode>[,<interval>[,<detGPIO>[,<repGPIO>]]]]	Set command sets the behaviour of antenna detection algorithm Parameters: **<mod>** 0 - antenna detection algorithm not active 1 - periodic activation of the antenna detection algorithm; detection is started every **<interval>** period, using **<detGPIO>** for detection; if the algorithm detects a change in the antenna status the module is notified by URC **#GSMAD** (see format below) 2 - instantaneous activation of the antenna detection algorithm; if the algorithm detects a change in the antenna status the module is notified by URC **#GSMAD** (see format below); this instantaneous activation doesn't affect a periodic activation eventually started before. This modality is obsolete and is maintained only for backward compatibility. We suggest to use the modality 3

URC format:

#GSMAD: <presence>

where:
<presence>
0 - antenna connected.
1 - antenna connector short circuited to ground.
2 - antenna connector short circuited to power.
3 - antenna not detected (open).

3 - instantaneous activation of the antenna detection algorithm as modality 2 but in this case the command doesn't return until the algorithm ended. The returned value is the antenna <presence> status just detected. Format:

AT#GSMAD=3
#GSMAD: <presence>

OK

This instantaneous activation doesn't affect a periodic activation eventually started before, then the output format would be:

AT#GSMAD=3
#GSMAD: <presence>

OK

#GSMAD: <presence> // URC resulting of previous #GSMAD=1

<urcmode> - URC presentation mode. It has meaning and can be set only if **<mod>** is 1.
0 - it disables the presentation of the antenna detection URC
1 - it enables the presentation of the antenna detection URC, whenever the antenna detection algorithm detects a change in the antenna status; the unsolicited message is in the format:

#GSMAD: <presence>

where:
<presence> is as before

<interval> - duration in seconds of the interval between two consecutive antenna detection algorithm runs (default is 120). It has meaning and can be set only if **<mod>** is 1.
..1..3600 - seconds

	<detGPIO> - defines which GPIO shall be used as input by the Antenna Detection algorithm. For the **<detGPIO>** actual range see Test Command **<repGPIO>** - defines which GPIO shall be used by the Antenna Detection algorithm to report antenna condition. It has meaning only if **<mod>** is 1. For the **<repGPIO>** actual range see Test Command. Note: the URC presentation mode **<urcmode>** is related to the current AT instance only (see **+cmux**); last **<urcmode>** settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth. Note: GPIO is set to LOW when antenna is connected. Set to HIGH otherwise Note: **#GSMAD** parameters, excluding **<urcmode>**, are saved in NVM.
AT#GSMAD?	Read command returns the current parameter settings for **#GSMAD** command in the format: **#GSMAD: <mod>,<urcmode>,<interval>,<detGPIO>,<repGPIO>**
AT#GSMAD=?	Test command reports the supported range of values for parameters **<mod>, <urcmode>, <interval>, <detGPIO>** and **<repGPIO>**.

3.5.7.1.79. SIM Detection Mode - #SIMDET

#SIMDET - SIM Detection Mode	**SELINT 2**
AT#SIMDET= <mode>	Set command specifies the SIM Detection mode Parameter: **<mode>** - SIM Detection mode 0 - ignore SIMIN pin and simulate the status 'SIM Not Inserted' 1 - ignore SIMIN pin and simulate the status 'SIM Inserted' (default for GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL, GL868-DUAL V3, GL865-QUAD and GE866-QUAD) 2 – automatic SIM detection through SIMIN Pin (default except for GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL, GL868-DUAL V3, GL865-QUAD and GE866-QUAD) **NOTE:** with Sim-On-Chip products **#SIMDET** allows to switch between internal and external SIM, as described below: 0 – switch to internal SIM 1 – switch to external SIM, ignore SIMIN pin and simulate the status 'SIM Inserted' 2 – automatic SIM detection through SIMIN Pin and automatic switch to internal SIM in case that external SIM has not been detected (default).
AT#SIMDET?	Read command returns the currently selected Sim Detection Mode in the format: **#SIMDET: <mode>,<simin>** where:

#SIMDET - SIM Detection Mode	SELINT 2
	<mode> - SIM Detection mode, as before **<simin>** - SIMIN pin real status 0 - SIM not inserted 1 - SIM inserted
AT#SIMDET=?	Test command reports the supported range of values for parameter **<mode>**

3.5.7.1.80. SIM Enhanced Speed - #ENHSIM

#ENHSIM - SIM Enhanced Speed	SELINT 2
AT#ENHSIM=<mod>	Set command activates or deactivates the Sim Enhanced Speed Functionality. Parameter: **<mod>** 0 - Not Active (default for all 7.3.xxx software release) 1 - BRF is (F=512 D=8) (default for 10.0x.xxx software release) *(For BRF definition refer to ISO-7816-3* Note: value **<mod>** is saved in NVM and will be used since next module startup or new SIM insertion. Note: module will use the slowest speed between the one programmed and the one supported by the SIM.
AT#ENHSIM?	Read command returns whether the Sim Enhanced Speed Functionality is currently activated or not, in the format: **#ENHSIM: <mod>**
AT#ENHSIM=?	Test command reports the supported range of values for parameter **<mod>**.
Reference	GSM 11.11, ISO-7816-3
Note	It is strongly suggested to verify which is the maximum speed supported by the final application

3.5.7.1.81. Subscriber number - #SNUM

#SNUM – Subscriber Number	SELINT 2
AT#SNUM=<index>,<number>[,<alpha>]	Set command writes the MSISDN information related to the subscriber (own number) in the EFmsisdn SIM file. Parameter: **<index>** - record number The number of record in the EFmsisdn depends on the SIM. If only **<index>** value

	is given, then delete the EFmsisdn record in location **<index>** is deleted. For all SW versions except 13.00.xxx, if the ENS functionality has not been previously enabled (see **#ENS**), **<index>**=1 is the only value admitted. For 13.00.xxx SW version all records are available, irrespective of ENS functionality setting. **<number>** - string containing the phone number The string could be written between quotes. For all SW versions except 13.00.xxx, if the ENS functionality has been previously enabled (see **#ENS**) "+" at start only is also admitted (international numbering scheme). For 13.00.xxx SW version "+" at start only is always admitted, irrespective of ENS functionality setting. **<alpha>** - alphanumeric string associated to **<number>.** Default value is empty string (""), otherwise the used character set should be the one selected with **+CSCS.** The string could be written between quotes, the number of characters depends on the SIM. If empty string is given (""), the corresponding **<alpha>** will be an empty string. Note: the command return ERROR if EFmsisdn file is not present in the SIM or if MSISDN service is not allocated and activated in the SIM Service Table (see 3GPP TS 11.11).
AT#SNUM=?	Test command returns the **OK** result code

3.5.7.1.82. SIM Answer to Reset - #SIMATR

#SIMATR – SIM Answer To Reset	**SELINT 2**
AT#SIMATR	This command returns the characters collected from the Reset/ATR procedure. Note: The ATR is the information presented by the SIM to the ME at the beginning of the card session and gives operational requirements (ISO/IEC 7816-3).

3.5.7.1.83. CPU Clock Mode - #CPUMODE

#CPUMODE - CPU Clock Mode	**SELINT 2**
AT#CPUMODE= <mode>	Set command specifies the CPU clock mode Parameter: **<mode>** 0 - normal CPU clock @26Mhz 1 - CPU clock @52Mhz

	2 - CPU clock @52Mhz, during GPRS TX/RX only 3 - CPU clock @104Mhz 4 - CPU clock @104Mhz, during GPRS TX/RX only 5 - CPU clock @52Mhz, during GPRS TX/RX and voice call 6 - CPU clock @104Mhz, during GPRS TX/RX and voice call 7 - CPU clock MAX supported, during RSA AT command Note: using **<mode>** greater than 0, the power consumption will increase
AT#CPUMODE?	Read command returns the currently selected CPU clock mode in the format: **#CPUMODE: <mode>**
AT#CPUMODE=?	Test command reports the supported range of values for parameter **<mode>**.

3.5.7.1.84. GSM Context Definition - #GSMCONT

#GSMCONT - GSM Context Definition	**SELINT 2**
AT#GSMCONT= <cid>[,<P_type>, <CSD_num>]	Set command specifies context parameter values for the only GSM context, identified by the (local) context identification parameter 0. Parameters: **<cid>** - context Identifier; numeric parameter which specifies the only GSM context 0 **<P_type>** - protocol type; a string parameter which specifies the type of protocol "IP" - Internet Protocol **<CSD_num>** - phone number of the internet service provider Note: issuing **#GSMCONT=0** causes the values for context number **0** to become undefined.
AT#GSMCONT?	Read command returns the current settings for the GSM context, if defined, in the format: **+GSMCONT: <cid>,<P_type>,<CSD_num>**
AT#GSMCONT=?	Test command returns the supported range of values for all the parameters.

3.5.7.1.85. IPEGSM configurations - #GSMCONTCFG

#GSMCONTCFG - IPEGSM configurations	**SELINT 2**
AT#GSMCONTCFG= <actTo>[,<unused_A > [,<unused_B >[,<unused_C>]]]]	Set command sets the IPEGSM configuration. Parameters: **<actTo>** - activation timer value 0 – no timer (default) 50..65535 – timeout value in hundreds of milliseconds

	Note: this timeout starts as soon as the PPP activation starts (refer to EasyGPRS User Guide). It does not include the time for the CSD call to be established. Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance.
AT#GSMCONTCFG?	Read command returns the current configuration parameters value: **#GSMCONTCFG:<actTo>,0,0,0<CR><LF>**
AT#GSMCONTCFG=?	Test command returns the range of supported values for all the subparameters.

3.5.7.1.86. Show Address - #CGPADDR

#CGPADDR - Show Address	**SELINT 2**
AT#CGPADDR=[<cid>[,<cid>[,…]]]	Execution command returns either the IP address for the GSM context (if specified) and/or a list of PDP addresses for the specified PDP context identifiers Parameters: **<cid>** - context identifier 0 - specifies the GSM context (see **+GSMCONT**). 1..5 - numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). Note: if no **<cid>** is specified, the addresses for all **defined** contexts are returned. Note: issuing the command with more than 6 parameters raises an error. Note: the command returns only one row of information for every specified **<cid>**, even if the same **<cid>** is present more than once. The command returns a row of information for every specified **<cid>** whose context has been already defined. No row is returned for a **<cid>** whose context has not been defined yet. Response format is: **#CGPADDR: <cid>,<address>[<CR><LF>** **#CGPADDR: <cid>,<address>[…]]** where: **<cid>** - context identifier, as before **<address>** - its meaning depends on the value of **<cid>** a) if **<cid>** is the (only) GSM context identifier (**<cid>=0**) it is the

	dynamic address assigned during the GSM context activation. b) if **<cid>** is a PDP context identifier (**<cid>** in (1..5)) it is a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the **+CGDCONT** command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by **<cid>.** Note: if no address is available the empty string (**“”**) is represented as **<address>.**
AT#CGPADDR=?	Test command returns a list of defined **<cid>**s.
Example	AT#SGACT=0,1 #SGACT: xxx.yyy.zzz.www OK AT#CGPADDR=0 #CGPADDR: 0,”xxx.yyy.zzz.www” OK AT#CGPADDR=? #CGPADDR: (0) OK

3.5.7.1.87. Configure TCP window size - #TCPMAXWIN

#TCPMAXWIN – Configure TCP window size	**SELINT 2**
AT#TCPMAXWIN=[<winSize>]	This command permits to configure the TCP window size Parameters: **<winSize>** - TCP window size 0 – TCP window size is handled automatically by the module(default) 1-65535 –TCP window size value Note: command has to be set before opening socket connection(**#SD,#SL/SA,#FTPOPEN/GET/PUT**…) to take effect Note: it permits to slow down TCP when application wants to retrieve data slowly(for instance: cmd mode), to avoid early RST from server Note: the value set by command is directly stored in NVM
AT#TCPMAXWIN?	Read command reports the currently selected **<winSize>**in the

	format: **#TCPMAXWIN: <winSize>**
AT#TCPMAXWIN=?	Test command reports the supported range of values for parameter **<winSize>**

3.5.7.1.88. Call Establishment Lock - #CESTHLCK

#CESTHLCK – Call establishment lock	**SELINT 2**
AT#CESTHLCK=[<closure_type >]	This command can be used to disable call abort before the DCE enters connected state. **< closure_type >:** 0 - Aborting the call setup by reception of a character is generally possible at any time before the DCE enters connected state (default) 1 - Aborting the call setup is disabled until the DCE enters connected state
AT#CESTHLCK?	Read command returns the current setting of **<closure_type>** parameter in the format: **#CESTHLCK: <closure_type>**
AT#CESTHLCK=?	Test command returns the supported range of values for the **<closure_type>** parameter

3.5.7.1.89. Phone Activity Status - #CPASMODE

#CPASMODE – AT+CPAS answer mode	**SELINT 2**
AT#CPASMODE=<mode>	Set command enables/disables a modified AT+CPAS command response when the command is issued before an incoming call starts ringing (RING unsolicited code sent to the TE). If **<mode>** is 0, AT+CPAS response will be +CPAS: 4 otherwise the response will be +CPAS: 3 Parameter: **<mode>** - AT+CPAS response selection 0 – standard AT+CPAS response (factory default) 1 – modified AT+CPAS response. Note: the value set by command is directly stored in NVM and doesn't

	depend on the specific AT instance
AT#CPASMODE?	Read command reports the currently selected **<mode>** in the format: **#CPASMODE: <mode>**
AT#CPASMODE=?	Test command reports the supported range of values for parameter **<mode>**

3.5.7.1.90. ICCID SIM file reading mode - #FASTCCID

#FASTCCID – Set ICCID SIM file reading mode	**SELINT 2**
AT#FASTCCID=[<fast>]	The set command is used to specify the ICCID reading mode. **<fast>:** a numeric parameter which indicates the reading mode 0 – the ICCID value is read from the SIM card each time the AT#CCID command is issued and not during SIM card initialization (default for all products, except for GE910-QUAD, GE910-QUAD AUTO and GE910-GNSS) 1 – the ICCID value is read from the SIM card during SIM card initialization (default for GE910-QUAD, GE910-QUAD AUTO and GE910-GNSS) Note: the value is saved in NVM and has effect only at the next power cycle.
AT#FASTCCID?	The read command returns the currently selected reading mode in the form: **#FASTCCID: <fast>**
AT#FASTCCID=?	Test command reports the supported list of currently available <fast>s.

3.5.7.1.91. Write to I2C - #I2CWR

#I2CWR – Write to I2C	**SELINT 2**
AT#I2CWR=<sdaPin>,<sclPin>,<deviceId>,<registerId>,<len>	This command is used to Send Data to an I2C peripheral connected to module GPIOs **<sdaPin >:** GPIO number for SDA . Valid range is “any input/output pin” (see Test Command.) **<sclPin>:** GPIO number to be used for SCL. Valid range is “any output pin” (see Test Command). **<deviceId>:** address of the I2C device, with the LSB, used for read\write command. It doesn’t matter if the LSB is set to 0 or to 1. 10 bit addressing supported. Value has to be written in hexadecimal form (without 0x). **<registerId>:** Register to write data to , range 0..255.

#I2CWR – Write to I2C	SELINT 2
	Value has to be written in hexadecimal form (without 0x). **<len>:** number of data to send. Valid range is 1-254. The module responds to the command with the prompt '>' and awaits for the data to send. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). Data shall be written in Hexadecimal Form. If data are successfully sent, then the response is **OK**. If data sending fails for some reason, an error code is reported. Example if CheckAck is set and no Ack signal was received on the I2C bus E.g. AT#I2CWR=2,3,20,10,14 > 00112233445566778899AABBCCDD<ctrl-z> OK Set GPIO2 as SDA, GPIO3 as SCL; Device I2C address is 0x20; 0x10 is the address of the first register where to write I2C data; 14 data bytes will be written since register 0x10 NOTE: At the end of the execution GPIO will be restored to the original setting (check AT#GPIO Command) NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.
AT#I2CWR=?	Test command reports the supported list of currently available <service>s.

3.5.7.1.92. Read to I2C - #I2CRD

#I2CRD – Read to I2C	SELINT 2
AT#I2CRD= <sdaPin>, <sclPin>, <deviceId>, <registerId>, <len>	This command is used to Receive Data from an I2C peripheral connected to module GPIOs **<sdaPin >:** GPIO number for SDA . Valid range is “any input/output pin” (see Test Command.) **<sclPin>:** GPIO number to be used for SCL. Valid range is “any output pin” (see Command Test). **<deviceId>:** address of the I2C device, with the LSB, used for read\write command. It doesn’t matter if the LSB is set to 0 or to 1. 10 bit addressing supported.

#I2CRD – Read to I2C	SELINT 2
	Value has to be written in hexadecimal form (without 0x before). **<registerId>:** Register to read data from, range 0..255. Value has to be written in hexadecimal form (without 0x before). **<len>:** number of data to receive. Valid range is 1-254. Data Read from I2C will be dumped in Hex: E.g. AT#I2CRD=2,3,20,10,12 #I2CRD: 00112233445566778899AABBCC OK NOTE: If data requested are more than data available in the device, dummy data (normally 0x00 or 0xff) will be dumped. NOTE: At the end of the execution GPIO will be restored to the original setting (check AT#GPIO Command) NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.
AT#I2CRD=?	Test command reports the supported list of currently available <service>s.

3.5.7.1.93. Software level selection - #SWLEVEL

#SWLEVEL – SW Level selection	SELINT 2
AT#SWLEVEL=<level>	Set command enables 2 enhanced features: 1) It permits to get a faster indication of SIM status when the PIN is not required (see command #QSS) 2) DTMF duration (see AT+VTS;AT+VTD) can be controlled even for values shorter than 300mS. Parameters: **<level>** - SW level 0 - disable SW level (default for for all products, except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - enable SW level (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS)

	Note1: the value of **<level>** parameter is directly stored in NVM and doesn't depend on the specific AT instance. Note2: please remember that DTMFs are generated at network level, and the real duration can be operator dependant.
AT#SWLEVEL?	Read command reports the currently selected **<level>** in the format: **#SWLEVEL: <level>**
AT#SWLEVEL=?	Test command reports the supported range of values for parameter**<level>**

3.5.7.1.94. Control Command Flow - #CFLO

#CFLO – Command Flow Control	**SELINT 2**
AT#CFLO= <enable>	Set command enables/disables the flow control in command mode. If enabled, current flow control is applied to both data mode and command mode. Parameter: **<enable>** - 0 – disable flow control in command mode <default value> 1 – enable flow control in command mode Note: setting value is saved in the profile
AT#CFLO?	Read command returns current setting value in the format **#CFLO: <enable>**
AT#CFLO=?	Test command returns the range of supported values for parameter **<enable>**

3.5.7.1.95. Report concatenated SMS indexes - #CMGLCONCINDEX

#CMGLCONCINDEX – Report concatenated SMS indexes	**SELINT 2**
AT#CMGLCONCINDEX	The command will report a line for each concatenated SMS containing: **#CMGLCONCINDEX: N,i,j,k,...** where N is the number of segments that form the whole concatenated SMS i,j,k are the SMS indexes of each SMS segment , 0 if segment has not been received If no concatenated SMS is present on the SIM, only **OK** result code will be returned.
AT#CMGLCONCINDEX=?	Test command returns **OK** result code.
Example	at#cmglconcindex #CMGLCONCINDEX: 3,0,2,3 #CMGLCONCINDEX: 5,4,5,6,0,8

#CMGLCONCINDEX – Report concatenated SMS indexes	SELINT 2
	OK

3.5.7.1.96. Codec Information - #CODECINFO

#CODECINFO – Codec Information	SELINT 2
AT#CODECINFO[=<format>[, <mode>]]	This command is both a set and an execution command. Set command enables/disables codec information reports depending on the parameter **<mode>**, in the specified **<format>**. Parameters: **<format>** 0 – numeric format (default) 1 – textual format **<mode>** 0 - disable codec information unsolicited report (default) 1 - enable codec information unsolicited report only if the codec changes 2 - enable short codec information unsolicited report only if the codec changes If **<mode>=1** the unsolicited channel mode information is reported in the following format: (if **<format>=0**) **#CODECINFO: <codec_used>,<codec_set>** (if **<format>=1**) **#CODECINFO: <codec_used>,<codec_set1>** **[,<codec_set2>[..[,codec_setn]]]** If **<mode>=2** the unsolicited codec information is reported in the following format: **#CODECINFO: <codec_used>** The reported values are described below. Execution command reports codec information in the specified **<format>**. (if **<format>=0**) **#CODECINFO: <codec_used>**,**<codec_set>** (if **<format>=1**) **#CODECINFO: <codec_used>**,**<codec_set1>** **[,<codec_set2>[..[,codec_setn]]]**

#CODECINFO – Codec Information	SELINT 2

The reported values are:

(if **<format>=0**)
<codec_used> - one of the following channel modes:
0 – no TCH
1 - full rate speech 1 on TCH
2 - full rate speech 2 on TCH
4 - half rate speech 1 on TCH
8 - full rate speech 3 – AMR on TCH
16 - half rate speech 3 – AMR on TCH
128 – full data 9.6
129 – full data 4.8
130 – full data 2.4
131 – half data 4.8
132 – half data 2.4
133 – full data 14.4

<codec_set>
1..31 - sum of integers each representing a specific codec mode:
1 - FR, full rate mode enabled
2 - EFR, enhanced full rate mode enabled
4 - HR, half rate mode enabled
8 - FAMR, AMR full rate mode enabled
16 - HAMR, AMR half rate mode enabled

(if **<format>=1**)
<codec_used> - one of the following channel modes:
None – no TCH
FR - full rate speech 1 on TCH
EFR - full rate speech 2 on TCH
HR - half rate speech 1 on TCH
FAMR - full rate speech 3 – AMR on TCH
HAMR - half rate speech 3 – AMR on TCH
FD96 - full data 9.6
FD48 - full data 4.8
FD24 - full data 2.4
HD48 - half data 4.8
HD24 - half data 2.4
FD144 - full data 14.4

<codec_set*n*>
FR - full rate mode enabled
EFR - enhanced full rate mode enabled
HR - half rate mode enabled
FAMR - AMR full rate mode enabled

#CODECINFO – Codec Information	SELINT 2
	HAMR - AMR half rate mode enabled Note: The command refers to codec information in speech call and to channel mode in data/fax call. Note: if AT#CODEC is 0, the reported codec set for **<format>=0** is 31 (all codec).
AT#CODECINFO?	Read command reports **<format>** and **<mode>** parameter values in the format: **#CODECINFO: <format>,<mode>**
AT#CODECINFO=?	Test command returns the range of supported **<format>** and **<mode>**.

3.5.7.1.97. Enable trace - +TRACE

+TRACE – Enable trace	SELINT 2
AT+TRACE=<mode>[,<speed>]	This command controls the trace; it allows selecting the trace mode, method and the trace data transfer rate Parameters: **<mode>**: numeric parameter used to switch the trace on or off 0: disables the trace 1: enables the trace **<speed>**: numeric parameter indicating the trace data transfer rate which may be: (115200,230400,460800,921600) Note: if **<mode>**=1 and **<speed>** is omitted, the trace will be run at the last trace data transfer setted. Note: for trace data transfer rate upper than 115200, **AT#CPUMODE**=1 or **AT#CPUMODE**=3 setting is recommended to avoid possible trace stuck.
AT+TRACE?	Read command reports the currently selected parameter values in the format: **+TRACE: <mode>,<speed>**
AT+TRACE=?	Test command reports the supported range of values for all parameters
Examples	at+trace=0 at+trace=1,230400

3.5.7.1.98. Second Interface Instance - #SII

#SII – Second Interface Instance	SELINT 2
AT#SII=<inst>[,<rate>[,<format>[,<parity>]]]	This command activates one of the three AT instances available, and assigns it to the ASC1 serial port at a particular speed and format. Parameters: **<inst>:** is a number that identifies the instance that will be activated on ASC1. The parameter is mandatory and can be 0, 1 or 2: 0 – disables the other AT instance and restores the trace service; 1 – enables instance 1; 2 – enables instance 2; **<rate>:** Set command specifies the DTE speed at which the device accepts commands during command mode operations; it may be used to fix the DTE-DCE interface speed. The default value is 115200. It has sense only if **<inst>** parameter has value either 1 or 2. Parameter: 300 1200 2400 4800 9600 19200 38400 57600 115200 **<format>:** determines the number of bits in the data bits, the presence of a parity bit, and the number of stop bits in the start-stop frame. The default value is 3,0, (N81) format. It has sense only if **<inst>** parameter has value either 1 or 2. Parameter: 1 - 8 Data, 2 Stop 2 - 8 Data, 1 Parity, 1 Stop 3 - 8 Data, 1 Stop 5 - 7 Data, 1 Parity, 1 Stop **<parity>:** determines how the parity bit is generated and checked, if present. It has a meaning only if **<format>** parameter has value either 2 or 5 and only if **<inst>** parameter has value either 1 or 2. Parameter:

	0 - Odd 1 - Even Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance. Note: two sets of **<rate>, <format>** and **<parity>** parameters values are stored in NVM: one for instance 1 (**<inst>** = 1) and the other for instance 2 (**<inst>** = 2). The **<rate>, <format>** and **<parity>** parameters values are ignored when **<inst>** parameter has value 0. Note: ASC1 port doesn't support hardware flow control.
AT#SII?	Read command reports the currently active parameters settings in the format: **#SII: <inst>[,<rate>,<format>,<parity>]** Note: the **<rate>, <format>** and **<parity>** parameters values are showed only if **<inst>** parameter has value either 1 or 2.
AT#SII=?	Test command reports the supported range of values for parameter **<inst>**, **<rate>**, **<format>** and **<parity>**

3.5.7.1.99. SIMIN pin configuration - #SIMINCFG

#SIMINCFG – SIMIN pin configuration	**SELINT 2**
AT#SIMINCFG=<GPIO_pin>,<Simin_det_mode>	This command allows to configure a General Purpose I/O pin as SIM DETECT input and to set Simin pin status for SIM detection **Parameters:** **<GPIO_pin>** - GPIO pin number: 0 – no GPIO pin is selected (default value) 1 to *Max_GPIO_Pin_Number* **<Simin_det_mode>** - status of Simin pin for sim detection: 0 – Simin pin to ground means SIM inserted, to Vcc means SIM removed, for normal sim holder 1 – Simin pin to ground means SIM removed, to Vcc means SIM inserted, for micro sim holder Note: *Max_GPIO_Pin_Number* is the highest GPIO pin number available: this value depends on the hardware. (See Test command or Hardware User Guide) Note: first parameter makes sense only with GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL and GE866-QUAD
AT#SIMINCFG?	Read command reports the selected GPIO pin in the format:

	#SIMINCFG: <GPIO_pin>,<Simin_det_mode>
AT#SIMINCFG=?	Test command reports supported range of values for parameter **<GPIO_pin> and <Simin_det_mode>**

3.5.7.1.100. System turn-off - #SYSHALT

#SYSHALT – system turn-off	**SELINT 0,1,2**
AT#SYSHALT[= <GPIO_restore>, <DTR_wakeup_en>]	The module is turned off. It can be awaken by reset pin, alarm or DTR pin transition to low. Parameters: **< GPIO_restore >:** 0 – GPIOs and serial ports pins are left unchanged (default) 1 – GPIO and serial pins are set in input with pull down **<DTR_wakeup_en>:** 0 – DTR has no effect on module turned off by SYSHALT (default) 1 – DTR transition from high to low turns on again the module turned off by SYSHALT command
AT#SYSHALT?	Read command reports the default state of the parameters **<GPIO_restore>** and **<DTR_wakeup_en>** in the format: **#SYSHALT: 0,0**
AT#SYSHALT=?	Test command reports supported range of values for all parameters.

3.5.7.1.101. Enable USIM application - #ENAUSIM

#ENAUSIM – Enable USIM application	**SELINT 2**
AT#ENAUSIM=<enable>	This command enables/disables the USIM application Parameters: **<enable>:** 0: USIM application Disabled 1: USIM application Enabled, SIM Application Toolkit disabled 2: USIM application Enabled, SIM Application Toolkit enabled 3: USIM application Enabled, SIM Application Toolkit enabled, SIM auto detect Note: the value set by command is directly stored in NVM and available on following reboot. USIM application activation/deactivation is only performed at power on. Each time <**enable**> value is changed a power cycle is needed Note: when the USIM application is enabled with <enable> equal to 1, SIM Application Toolkit will be automatically disabled and cannot be activated. In particular, the request of SAT activation (see **#STIA**) will

	return ERROR and entering **AT#ENS = 1** doesn't activate SAT. Note: when USIM application is enabled with <enable> equal to 3, if USIM reading fails the module automatically switch to <enable> equal to 0 and try to read the card with USIM application disabled. Read command returns 0 but value is not stored in NVM, i.e. on following reboot <enable> value will be equal to 3.
AT#ENAUSIM?	Read command reports the currently selected **<enable>** in the format: **#ENAUSIM: <enable>**
AT#ENAUSIM=?	Test command reports the supported range of values for parameter **<enable>**

3.5.7.1.102. Select language - #LANG

#LANG – select language	**SELINT 2**
AT#LANG=<lan>	Set command selects the currently used language for displaying different messages Parameter: **<lan>** - selected language "en" – English (factory default) "it" – Italian
AT#LANG?	Read command reports the currently selected <lan> in the format: **#LANG: <lan>**
AT#LANG=?	Test command reports the supported range of values for parameter **<lan>**

3.5.7.1.103. Call forwarding Flags - #CFF

#CFF – Call Forwarding Flags	**SELINT 2**
AT#CFF=<enable>	Set command enables/disables the presentation of the SIM **call forwarding flags** URC. Parameter: **<enable>** 0 - disable the presentation of the **#CFF** URC 1 - enable the presentation of the **#CFF** URC each time the Call Forwarding Unconditional (CFU) SS setting is changed or checked and, at startup, the presentation of the status of the **call forwarding flags**, as they are currently stored on SIM. The URC format is:

#CFF – Call Forwarding Flags	SELINT 2
	#CFF: <status>,<fwdtonum> where: **<status>** 0 – CFU disabled 1 – CFU enabled **< fwdtonum >** - number incoming calls are forwarded to The presentation at start up of the **call forwarding flags** status, as they are currently stored on SIM, is as follows: **#CFF: <status>,< fwdtonum >** where: **<status>** 0 – CFU disabled 1 – CFU enabled **< fwdtonum >** - number incoming calls are forwarded to
AT#CFF?	Read command reports whether the presentation of the **call forwarding flags** URC is currently enabled or not, and, if the flags field is present in the SIM, the current status of the **call forwarding flags** as they are currently stored on SIM, and the number incoming calls are forwarded to. The format is: **#CFF: <enable>[,<status>,< fwdtonum >]**
AT#CFF=?	Test command returns the range of available values for parameter **<enable>**.

3.5.7.1.104. Hang up call - #CHUP

#CHUP - Hang Up Call	SELINT 2
AT#CHUP	Execution command ends all active and held calls, also if a multi-party session is running. It also allows disconnecting of a data call from a CMUX instance different from the one that was used to start the data call.
AT#CHUP=?	Test command returns the **OK** result code

3.5.7.1.105. Set Encryption algorithm - #ENCALG

#ENCALG – Set Encryption Algorithm	SELINT 2
AT#ENCALG=[<encGSM>][,<encGPRS>]	This command enables or disables the GSM and/or GPRS encryption algorithms supported by the module. Parameters: **<encGSM>:**

	0 – no GSM encryption algorithm 1..5 - sum of integers each representing a specific GSM encryption algorithm: 1 – A5/1 4 – A5/3 255 - reset the default values **<encGPRS>:** 0 – no GPRS encryption algorithm 1..7 - sum of integers each representing a specific GPRS encryption algorithm: 1 – GEA1 2 – GEA2 4 – GEA3 (supported only for 13.00.xxx SW version, starting from 13.00.xx6) 255 - reset the default values Note: the values are stored in NVM and available on following reboot. Note: If no parameter is issued, the set command returns ERROR.
AT#ENCALG?	Read command reports the currently selected **<encGSM>** and **<encGPRS>**, and the last used **<useGSM>** and **<useGPRS>** in the format: **#ENCALG: <encGSM>,<encGPRS>,<usedGSM>,<usedGPRS>** Parameters: **<usedGSM>:** 0 – no GSM encryption algorithm 1 – A5/1 4 – A5/3 **<usedGPRS>:** 0 – no GPRS encryption algorithm 1 – GEA1 2 – GEA2 4 – GEA3 (supported only for 13.00.xxx SW version, starting from 13.00.xx6)
AT#ENCALG=?	Test command reports the supported range of values for parameters in the format: **< encGSM >** and **<encGPRS>**.
Example	AT#ENCALG? #ENCALG: 5,2,1,1 OK

	AT#ENCALG=5,1 OK *sets the GSM encryption algorithm A5/1 and A5/3, and the GPRS encryption algorithm GEA1.* *It will be available at the next reboot.* AT#ENCALG? #ENCALG: 5,2,1,1 *The last two values indicate that the last used GSM encryption algorithm is A5/1 and the last used GPRS encryption algorithm is GEA1* *After reboot* AT#ENCALG? #ENCALG: 5,1,1,1

3.5.7.1.106. RS485 enable/disable and configure - #RS485

#RS485 – RS485 enable/disable and configure	**SELINT 2**
AT#RS485=<enable>[,<gpio>]	Set command enables/disables the half-RS485 standard using an additional configurable GPIO. The GPIO is set ON when the UART of module is transmitting and it is reset as soon as transmission is completed. Optionally it allows specifying the GPIO to use. Parameters: **<enable>** - enable/disable the simulation: 0 – disable half-RS485 1 – enable half-RS485 Note: if gpio is omitted, the first available GPIO will be selected. **<gpio>** - GPIO pin number: The test command returns the range of usable GPIO; this value depends on the hardware. Note: if **<enable>=0, <gpio>** has no meaning and can be omitted, otherwise it is mandatory to set this parameter. Note: the value set by command is stored in NVM. Note: sending two consecutive enable commands without a disable between them will produce an error; the configuration will remain the first.
AT#RS485?	Read command reports the current state and the selected GPIO in the format: **#RS485: < enable >,< gpio >**

AT#RS485=?	Test command reports the supported range of values for the parameters < **enable** > and < **gpio** >

3.5.7.1.107. Read current network status - #RFSTS

#RFSTS – Read current network status	**SELINT 2**
AT#RFSTS	Execution command reads current network status, in the format: **#RFSTS:<PLMN>,<ARFCN>,<RSSI>,<LAC>,<RAC>,<TXPWR>,<MM>,<RR>,<NOM>,<CID>,<IMSI>,<NetNameAsc>,<SD>,<ABND>** Where: **<PLMN>** - Country code and operator code(MCC, MNC) **<ARFCN>** - GSM Assigned Radio Channel **<RSSI>** - Received Signal Strength Indication **<LAC>** - Localization Area Code **<RAC>** - Routing Area Code **<TXPWR>** - Tx Power **<MM>** - Mobility Management State (NOT AVAILABLE) **<RR>** - Radio Resource State (NOT AVAILABLE) **<NOM>** - Network Operator Mode **<CID>** - Cell ID **<IMSI>** - International Mobile Subscriber Identity **<NetNameAsc>** - Operator name **<SD>** - Service Domain 0 - No Service 1 - CS only 2 - PS only 3 - CS+PS **<ABND>** - Active Band 1 - GSM 850 2 - GSM 900 3 - DCS 1800 4 - PCS 1900
AT#RFSTS=?	Test command tests for command existence.

3.5.7.1.108. Set CMUX Mode - #CMUXMODE

#CMUXMODE – CMUX Mode Set	**SELINT 2**
AT#CMUXMODE=<mode>	Set command specifies the CMUX mode

	Parameter: **<mode>:** 0 – Old break octect format (0x01) and ignore DTR feature is disabled (default) 1 – New break octect format (0x03) and ignore DTR feature is disabled 4 – Old break octect format (0x01) and ignore DTR feature is enabled 5 – New break octect format (0x03) and ignore DTR feature is enabled If the ignore DTR feature is enabled, then the DCE doesn't care the state and the transitions of the DTR line of the DTE. Otherwise a transition of the DTR instructs the DCE to disable the CMUX and switches to the normal command mode. Note: a software or hardware reset restores the default value.
AT#CMUXMODE?	Read command reports the currently selected **<mode>** in the format: **#CMUXMODE: <mode>**
AT#CMUXMODE =?	Test command reports the supported range of values for parameter **<mode>** Response: #CMUXMODE: (0,1,4,5)

3.5.7.1.109. Connect physical ports to Service Access Points - #PORTCFG

#PORTCFG – connect physical ports to Service Access Points	**SELINT 2**
AT#PORTCFG=<Variant>	Set command allows to connect Service Access Points (software anchorage points) to the external physical ports giving a great flexibility. Examples of Service Access Points: AT Parser Instance #1,#2, #3, TT(Telit Trace). Parameter: **<Variant>** - parameter range: 0, 1, 3, 4, 5, 8, 9 0 - default value 8, 9 – available only for GE910-GNSS Please, refer to "GE-910 Family Ports Arrangements User Guide" document for a detailed explanation of port configurations Note: in order to enable the set port configuration, the module has to be rebooted.
AT#PORTCFG?	Read command reports: **<requested>** value shows the requested configuration that will be activated on the next power off /on of the module; **<active>** value shows the actual configuration.

	#PORTCFG: <requested>,<active>
AT+PORTCFG=?	Test command reports a brief description of the supported ports arrangement solutions. For each **<Variant>** parameter value are displayed, on one row, the allowed couples formed by: a physical port and the logically connected internal software Access Point (AT, TT). On each row are reported the couples concerning both configurations: USB cable plugged into USB port or not plugged in. AT, indicated on each command row result, can be AT0, AT1, or AT2.

3.5.7.1.110. Change and insert file system password - #FILEPWD

#FILEPWD – Change and insert file system password	**SELINT 2**
AT#FILEPWD=<Mode>,<Pwd>[,<NewPwd>]	This command changes and inserts file system password. File system password is always enabled (see notes for factory default empty string “”). If current password is different from the empty string “” and password is not inserted then AT commands that make use of the file system will not work (see notes for insertion and AT response). Parameters: **<Mode>:** 1 – insert file system password; 2 – change file system password. **<Pwd>:** current password when inserting password, old password when changing password, string type (factory default is the empty string “”). **<NewPwd>:** new password when changing password, string type (only allowed if **<Mode>** parameter is 2). Note: maximum password length is 12 characters. Note: password is saved in NVM. Note: password value doesn’t depend on the specific CMUX instance. Note: in default configuration current password is equal to the empty string “” and password will be always considered inserted. Note: if current password is different from the empty string “”, password will be always not inserted at power on. Note: if current password is different from the empty string “”, after successful password insertion (<Mode> 1) password will remain inserted until power off. Note: after successful password change (<Mode> 2) password will be not inserted.

	Note: if current password is different from the empty string “” and password is not inserted then AT commands that make use of the file system (SCRIPT, M2M, MMS) will have either ERROR or +CME ERROR: 16 or +CME ERROR: incorrect password response depending on AT+CMEE setting.
AT#FILEPWD=?	Test command reports the supported range of values for parameters.
Example	First time: change default password AT#FILEPWD=2,"","mynewpwd" OK and insert password AT#FILEPWD=1,"mynewpwd" OK At next power on: insert password AT#FILEPWD=1,"mynewpwd" OK

3.5.7.1.111. NO CARRIER Indication Handling - #NCIH

#NCIH – NO CARRIER Indication Handling	**SELINT 2**
AT#NCIH= <enable>	Set command enables/disables the NO CARRIER indication after an incoming call, that is ringing, is dropped by network or calling party before being answered. Parameter: **<enable>** 0 - disables NO CARRIER indication (default) 1 – enables NO CARRIER indication
AT#NCIH?	Read command reports whether the indication is currently enabled or not, in the format: **#NCIH: <enable>**
AT#NCIH=?	Test command reports available values for parameter **<enable>**.

3.5.7.1.112. AT Command Delay – #ATDELAY

#ATDELAY – AT Command Delay	**SELINT 2**
AT#ATDELAY= <delay>	Set command sets a delay (in seconds) for the execution of the next AT command.

#ATDELAY – AT Command Delay	SELINT 2
	Parameters: <**delay**> - delay in 100 milliseconds intervals; 0 means no delay Note: <**delay**> is only applied to first command executed after **#ATDELAY**
AT#ATDELAY=?	Test command returns the supported range of values for parameter <**delay**>
Example	Delay "at#gpio=1,1,1" execution of 5 seconds: at#gpio=1,0,1;#atdelay=50;#gpio=1,1,1 OK

3.5.7.1.113. Power Fix – #PCLFIX

#PCLFIX – Power Fix	SELINT 2
AT#PCLFIX=[<pclGSM>[,<pclDCS>[,<pclPCS>]]]	Sets the fixed value of PCL (power control level) Parameters: <**pclGSM**> - numeric parameter indicating the fixed PCL for GSM band. Range: (5-19, 99); Default: 99 <**pclDCS**> - numeric parameter indicating the fixed PCL for DCS band. Range: (0-15, 99); Default: 99 <**pclPCS**> numeric parameter indicating the fixed PCL for PCS band. Range: (0-15, 99); Default: 99 Note: If the value is set to 99 the PCL is managed by network Note: the set values aren't stored in NVM. Note: If the network requires a PCL value, the module will use the PCLFIX value instead. Note: This is not compliant to ETSI specifications. Note: This command inhibits AT #PCLMIN settings Note: the different power control levels (PCL) shall have the nominal output power as defined in the table below. These tables are extracted from 3GPP ETSI TS 145 005 V4.19.0 (2010-07).

GSM 400, GSM 900, GSM 850 and GSM 700

Power control level	Nominal Output power (dBm)	Tolerance (dB) for conditions	
		normal	extreme
0-2	39	±2	±2,5
3	37	±3	±4
4	35	±3	±4
5	33	±3	±4
6	31	±3	±4
7	29	±3	±4
8	27	±3	±4
9	25	±3	±4
10	23	±3	±4
11	21	±3	±4
12	19	±3	±4
13	17	±3	±4
14	15	±3	±4
15	13	±3	±4
16	11	±5	±6
17	9	±5	±6
18	7	±5	±6
19-31	5	±5	±6

DCS 1 800

Power control level	Nominal Output power (dBm)	Tolerance (dB) for conditions	
		normal	extreme
29	36	±2	±2,5
30	34	±3	±4
31	32	±3	±4
0	30	±3	±4
1	28	±3	±4
2	26	±3	±4
3	24	±3	±4
4	22	±3	±4
5	20	±3	±4
6	18	±3	±4
7	16	±3	±4
8	14	±3	±4
9	12	±4	±5
10	10	±4	±5
11	8	±4	±5
12	6	±4	±5
13	4	±4	±5
14	2	±5	±6
15-28	0	±5	±6

PCS1900

Power Control Level	Output Power (dBm)	Tolerance (dB) for conditions

				Normal	Extreme
		22-29	Reserved	Reserved	Reserved
		30	33	±2 dB	±2,5 dB
		31	32	±2 dB	±2,5 dB
		0	30	±3 dB[1]	±4 dB[1]
		1	28	±3 dB	±4 dB
		2	26	±3 dB	±4 dB
		3	24	±3 dB[1]	±4 dB[1]
		4	22	±3 dB	±4 dB
		5	20	±3 dB	±4 dB
		6	18	±3 dB	±4 dB
		7	16	±3 dB	±4 dB
		8	14	±3 dB	±4 dB
		9	12	±4 dB	±5 dB
		10	10	±4 dB	±5 dB
		11	8	±4 dB	±5 dB
		12	6	±4 dB	±5 dB
		13	4	±4 dB	±5 dB
		14	2	±5 dB	±6 dB
		15	0	±5 dB	±6 dB
		16-21	Reserved	Reserved	Reserved
		NOTE: Tolerance for MS Power Classes 1 and 2 is ±2 dB normal and ±2,5 dB extreme at Power Control Levels 0 and 3 respectively.			

AT#PCLFIX?	Read command returns the current parameter settings for **#PCLFIX** command for all bands in the format: **#PCLFIX: <pclGSM>,<pclDCS>,<pclPCS>**
AT#PCLFIX=?	Test command reports the supported range of parameters values.

3.5.7.1.114. PCL Minimum – #PCLMIN

#PCLMIN - PCL MINimum	**SELINT 0/1/2**
AT#PCLMIN=<pclGSM>,<pclDCS>,<pclPCS>	Set command sets the minimum PCL (power control level) Parameters: **<pclGSM>** - numeric parameter indicating the minimum PCL for GSM band. Range: 0-31; Default: 0 **<pclDCS>** - numeric parameter indicating the minimum PCL for DCS band. Range: 0-28; Default: 0 **<pclPCS>** numeric parameter indicating the minimum PCL for PCS band. Range: 0-15; Default: 0 Note: the set values are stored in NVM. Note: If the network requires a PCL lower than PCLMIN value, the module will use the PCLMIN value instead and so it will use less power in transmission: this is not

compliant to ETSI specifications.

Note: If the command #PCLFIX is issued, then the command #PCLMIN is inhibited

Note: this command is not compliant to ETSI specifications

Note: the different power control levels (PCL) shall have the nominal output power as defined in the table below. These tables are extracted from 3GPP ETSI TS 145 005 V4.19.0 (2010-07).

GSM 400, GSM 900, GSM 850 and GSM 700

Power control level	Nominal Output power (dBm)	Tolerance (dB) for conditions	
		normal	extreme
0-2	39	±2	±2,5
3	37	±3	±4
4	35	±3	±4
5	33	±3	±4

15	0	±5 dB	±6 dB
16-21	Reserved	Reserved	Reserved
NOTE: Tolerance for MS Power Classes 1 and 2 is ±2 dB normal and ±2,5 dB extreme at Power Control Levels 0 and 3 respectively.			

AT#PCLMIN?	Read command returns the current parameter settings for **#PCLMIN** command for all bands in the format: **#PCLMIN: <pclGSM>,<pclDCS>,<pclPCS>**
AT#PCLMIN=?	Test command reports the supported range of parameters values.

3.5.7.1.115. Enable Test Mode command in not signalling mode – #TESTMODE

#TESTMODE – Enable Test Mode command in not signalling mode	**SELINT 2**

AT#TESTMODE=<command>

The command allows setting module in not signaling mode. The functionality has to be first activated by sending **AT#TESTMODE="TM"**, which sets the module in Test Mode. Only after this set, **AT#TESTMODE** can be used with the other allowed CT commands. To exit from Test Mode and go back to Operative Mode, the command **AT#TESTMODE ="OM"** has to be sent.

Parameter:
<command>
this string corresponds to a CT command. To be accepted by **AT#TESTMODE**, the CT command has to belong to the following list of CT commands enabled for this use:

- "*TM*"→ forces the module in Test Mode;
- "*OM*"→ forces the module in Operative Mode
- "*TCH*"→starts the non-stop module transmission. It enables one Tx Slot
- "*TCH2*" →starts the non-stop module transmission. It enables two TX slots
- "*TQ <training_sequence>*"→ sets the training sequence; *<training_sequence>* has the range: 0 ÷ 7
- "*PL <power_lev>*"→ sets the Power Control Level for lower and upper bands; power_lev has the range: 0 ÷ 19
- "*PL2 <power_lev0> <power_lev1>*"→ sets the Power Control Level for both TX slots; power_lev0 is related to the first slot and power_lev1 to the second one; power_lev0 and power_lev1 has the range: 0 ÷ 19
- "RL" → Read Rx power level
- "BERON" and "BEROFF" to enable/disable BER with Test SIM card
- "ESC"→ exits the current non-stop sequence. It must be used to stop TCH/TCH2 transmission
- "*SetPCSBand <band>*"→ sets the PCS band;

band	Band
0	850/900/1800
1	850/900/1900

- "*CH <GSM_ETSI_Index>*"→ sets the ARFCH;

GSM_ETSI_Index	Band
1 ÷ 124	GSM (Standard Band)
975 ÷ 1023	E GSM (Extended Band)
955 ÷ 974	R GSM (Railway Band)
512 ÷ 885	DCS Band (1800 MHz)
512 ÷ 810	PCS Band (1900 MHz)
128 ÷ 251	GSM 850 (850 MHz)

	The string of the enabled CT command must have the correct number of parameters supported by the CT command. The parameter is not case sensitive Note 1: in Test Mode the other AT commands doesn't work. Note 2: in Test Mode the only allowed DTE speed is 115200 (see **+IPR**) Note 3: in Test Mode the multiplexing protocol control channel can't be enabled (see **+CMUX**) Note 4: in 13.00.xxx SW version, after issuing **AT#TESTMODE="TM"** or **"OM"**, the module reboots.
AT# TESTMODE?	Read command reports the currently selected **<command>** in the format: **#TESTMODE: <TestModeStatus>** Where: **<TestModeStatus>** can assume the following values: - 1 if the module is in Test Mode - 0 if the module is in Operative Mode
AT# TESTMODE=?	Test command returns the **OK** result code

3.5.7.1.116. Select the GSM paging number to skip – #IDLEPAGING

#IDLEPAGING - Select the GSM paging number to skip	
AT#IDLEPAGING =[<mode>]	The set command is used to specify how many GSM paging to skip mode **<mode>:** a numeric parameter which corresponds to the number of GSM paging will be skip 0 – GSM paging not skip. Every paging will be received (default) 1 – One GSM paging will be skip every two paging received (50%) 2 – Two GSM paging will be skip every three paging received (33% paging received) 3 – Three GSM paging will be skip every four paging received (25%) Note: This feature is useful in power saving mode, because paging skip allow to reduce the module power consumptions. Note: values greater than 0 for parameter **<mode>** deviate from 3GPP standard.
AT#IDLEPAGING?	The read command returns the currently selected number GSM paging to skip in the form: **#IDLEPAGING: <mode>**
AT#IDLEPAGING =?	Test command reports the supported list of currently available <mode>s.

3.5.7.1.117. Initialize modem serial port with SPI protocol – #SPIOPEN

#SPIOPEN – Initializes modem serial port with SPI protocol	SELINT 2
AT#SPIOPEN=<ID>,<speed>, <mode>	This command initializes the provided modem serial port for SPI protocol. Parameters: **<ID>** - supported value is 3 <**speed**> - supported speed value: 1 for 1 Mhz 2 for 3 Mhz 3 for 6 Mhz 4 for 12 Mhz <**mode**> - CPOL CPH setting: 0 Clock signal is active high and data is sampled in rising edge. 1 Clock signal is active high and data is sampled in falling edge. 2 Clock signal is active low and data is sampled in rising edge. 3 Clock signal is active low and data is sampled in falling edge Note:
AT#SPIOPEN?	Read command Returns last provided Parameters values (0,0,0 as default)

AT#SPIOPEN=?	Test command reports available values for parameters **<ID>**, **<speed>** and **<mode>**.

3.5.7.1.118. De-initialize modem serial port for SPI protocol – #SPICLOSE

#SPICLOSE – De-initializes modem serial port for SPI protocol	**SELINT 2**
AT#SPICLOSE=<ID>	This command de-initializes the provided modem serial port for the SPI protocol . Parameters: **<ID>** - supported value is 3 Note: returns OK if de-initialization complete, ERROR otherwise
AT#SPICLOSE?	Read command returns last de-initialized **<ID>** (0 as default).
AT#SPICLOSE=?	Test command reports available values for parameter **<ID>**.

3.5.7.1.119. Write a buffer to the SPI and prints the read data – #SPIRW

#SPIRW – Writes a buffer to the SPI and prints the read data	**SELINT 2**
AT#SPIRW=[<length>]	This command writes a buffer to the SPI and prints the read data. Parameters: <**length**> - buffer length : MIN 1 byte MAX 128 bytes The module responds to the command with the prompt <greater_than><space> and waits for the data to send. When <**length**> bytes have been sent, operation is automatically completed. If data are successfully sent, the module answer with the bytes read on the SPI RX channel. The received data can be read on the AT console, the amount of printed data is the same received that is the length of the sent data. Note: the modem serial port on which the SPI data must be sent has to be initialized previously with a AT#SPIOPEN command, otherwise it will return ERROR.
AT#SPIRW=?	Test command reports available value for parameter **<length>**.

3.5.7.2. Ring Indicator Commands

3.5.7.2.1. Event Ring Indicator - #E2RI

#E2RI – Event Ring Indicator	SELINT 2
AT#E2RI=<event_mask>,<duration>	Set command enables/disables the Ring Indicator pin response to one or more events. If an event has been enabled, a negative going pulse is generated when event happens. The duration of this pulse is determined by the value of **<duration>**. Parameters: **<event_mask>** : 0 – disables all events hexadecimal number representing the list of events: 1 – Power Saving Mode (same as **AT#PSMRI=<duration>**) 2 – Socket Listen (same as **AT#E2SLRI=<duration>**) 4 – OTA firmware upgrade (same as **AT#OTASETRI=<duration>**) 8 – MT SMS has been received (same as **AT#E2SMSRI=<duration>**) 10 – +CREG will change status 20 – +CGREG will change status 40 – #QSS become 2 (SIM INSERTED and PIN UNLOCKED) 80 – MO SMS has been delivered 100 – Jamming Detection & Reporting (JDR) The hexadecimal number is actually a bit mask, where each bit, when set/not set, indicates that the corresponding event has been enabled/disabled. **<duration>** : 50..1150 - the duration in ms of the pulse generated Note: The values set by the command are stored in the profile extended section and they don't depend on the specific AT instance. Note: Enabling JDR event when the Enhanced Jamming Detection & Reporting feature has been previously enabled (see #JDRE and #JDRENH)
AT#E2RI?	Read command reports a line for each event and the duration in ms of the pulse generated, in the format: **#E2RI: <event_mask>,<duration>**
AT#E2RI=?	Test command returns supported values ofparameters <event_mask> and <duration>

3.5.7.2.2. Socket Listen Ring Indicator - #E2SLRI

#E2SLRI - Socket Listen Ring Indicator	SELINT 0 / 1 / 2
AT#E2SLRI=[<n>]	Set command enables/disables the Ring Indicator pin response to a Socket Listen

#E2SLRI - Socket Listen Ring Indicator	SELINT 0 / 1 / 2
	connect and, if enabled, the duration of the negative going pulse generated on receipt of connect. Parameter: <**n**> - **RI** enabling 0 - **RI** disabled for Socket Listen connect (factory default) 50..1150 - **RI** enabled for Socket Listen connect; a negative going pulse is generated on receipt of connect and <**n**> is the duration in ms of this pulse.
AT#E2SLRI?	Read command reports whether the Ring Indicator pin response to a Socket Listen connect is currently enabled or not, in the format: **#E2SLRI: <n>**
AT#E2SLRI=?	Test command returns the allowed values for parameter <**status**>**.**

3.5.7.2.3. SMS Ring Indicator - #E2SMSRI

#E2SMSRI - SMS Ring Indicator	SELINT 0 / 1
AT#E2SMSRI[= [<n>]]	Set command enables/disables the Ring Indicator pin response to an incoming SMS message. If enabled, a negative going pulse is generated on receipt of an incoming SMS message. The duration of this pulse is determined by the value of <**n**>. Parameter: <**n**> - **RI** enabling 0 - disables **RI** pin response for incoming SMS messages (factory default) 50..1150 - enables **RI** pin response for incoming SMS messages. The value of <**n**> is the duration in ms of the pulse generated on receipt of an incoming SM. Note: if **+CNMI=3,1** command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on **RI** pin, no matter if the **RI** pin response is either enabled or not. Note: issuing **AT#E2SMSRI<CR>** is the same as issuing the Read command. Note: issuing **AT#E2SMSRI=<CR>** returns the **OK** result code.
AT#E2SMSRI?	Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format: **#E2SMSRI: <n>** Note: as seen before, the value <**n**>**=0** means that the **RI** pin response to an incoming SM is disabled.
AT#E2SMSRI=?	Reports the range of supported values for parameter <**n**>

#E2SMSRI - SMS Ring Indicator	SELINT 2
AT#E2SMSRI= [<n>]	Set command enables/disables the Ring Indicator pin response to an incoming SMS message. If enabled, a negative going pulse is generated on receipt of an incoming

#E2SMSRI - SMS Ring Indicator	SELINT 2
	SMS message. The duration of this pulse is determined by the value of **<n>**. Parameter: **<n>** - **RI** enabling 0 - disables **RI** pin response for incoming SMS messages (factory default) 50..1150 - enables **RI** pin response for incoming SMS messages. The value of **<n>** is the duration in ms of the pulse generated on receipt of an incoming SM. Note: if **+CNMI=3,1** command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on **RI** pin, no matter if the **RI** pin response is either enabled or not.
AT#E2SMSRI?	Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format: **#E2SMSRI: <n>** Note: as seen before, the value **<n>=0** means that the **RI** pin response to an incoming SM is disabled.
AT#E2SMSRI=?	Reports the range of supported values for parameter **<n>**

3.5.7.2.4. Power saving mode ring - #PSMRI

#PSMRI – Power Saving Mode Ring	SELINT 2
AT#PSMRI= <x>	Set command enables/disables the Ring Indicator pin response to an URC message while modem is in power saving mode. If enabled, a negative going pulse is generated, when URC message for specific event is invoked. The duration of this pulse is determined by the value of **<x>**. Parameter: **<x>** - **RI** enabling 0 - disables **RI** pin response for URC message(factory default) 50-1150 - enables **RI** pin response for URC messages. Note: when RING signal from incoming call/SMS/socket listen is enabled, the behaviour for #PSMRI will be ignored. Note: to avoid missing of URC messages while modem is in power saving mode flow control has to be enabled in command mode (AT#CFLO=1) Note: the behavior for #PSMRI is invoked, only when modem is in sleep mode (AT+CFUN=5 and DTR Off on Main UART) Note: the value set by command is stored in the profile extended section and doesn't depend on the specific AT instance
AT#PSMRI?	Read command reports the duration in ms of the pulse generated, in the

	format: **#PSMRI: <x>**
AT#PSMRI=?	Test command reports the supported range of values for parameter **<x>**

3.5.7.2.5. OTA Set Ring Indicator - #OTASETRI

#OTASETRI - OTA Set Ring Indicator	**SELINT 0/1**
AT#OTASETRI=[<n>]	Set command enables/disables the Ring Indicator pin response to a manual OTA server request to start the firmware upgrade. If enabled, a negative going pulse is generated when the URC *"#OTAEV: Do you want to upgrade the firmware?*" is prompted (see **AT#OTASUAN** command). The duration of this pulse is determined by the value of **<n>**. Parameter: **<n> - RI** enabling 0 - disables **RI** pin response when the URC *"#OTAEV: Do you want to upgrade the firmware?*" is prompted (factory default) 50..1150 - enables **RI** pin response. The value of **<n>** is the duration in ms of the pulse generated when the URC *"#OTAEV: Do you want to upgrade the firmware?*" is prompted. Note: if the <response> parameter of the AT#OTASUAN command has the value 2, then the URC is prompted indefinitely until the Fw update request is accepted or reject and, for every URC, a pulse is generated. Note: the setting is saved in the profile parameters
AT#OTASETRI?	Read command reports the duration in ms of the pulse generated when the URC "*#OTAEV: Do you want to upgrade the firmware?*" is prompted, in the format: **#OTASETRI: <n>** Note: as seen before, the value **<n>=0** means that the **RI** pin response to the URC is disabled.
AT#OTASETRI	Execution command has the same effect as the Read command
AT#OTASETRI =?	Reports the range of supported values for parameter **<n>**

#OTASETRI - OTA Set Ring Indicator	**SELINT 2**
AT#OTASETRI=[<n>]	Set command enables/disables the Ring Indicator pin response to a manual OTA server request to start the firmware upgrade. If enabled, a negative going pulse is generated when the URC *"#OTAEV: Do you want to upgrade the firmware?*" is prompted (see **AT#OTASUAN** command). The duration of this pulse is determined by the value of **<n>**. Parameter: **<n> - RI** enabling 0 - disables **RI** pin response when the URC *"#OTAEV: Do you want to upgrade*

#OTASETRI - OTA Set Ring Indicator	SELINT 2
	the firmware?" is prompted (factory default) 50..1150 - enables **RI** pin response. The value of **<n>** is the duration in ms of the pulse generated when the URC *"#OTAEV: Do you want to upgrade the firmware?*" is prompted. Note: if the <response> parameter of the AT#OTASUAN command has the value 2, then the URC is prompted indefinitely until the Fw update request is accepted or reject and, for every URC, a pulse is generated. Note: the setting is saved in the profile parameters
AT#OTASETRI?	Read command reports the duration in ms of the pulse generated when the URC "*#OTAEV: Do you want to upgrade the firmware?*" is prompted, in the format: **#OTASETRI: <n>** Note: as seen before, the value **<n>=0** means that the **RI** pin response to the URC is disabled.
AT#OTASETRI =?	Reports the range of supported values for parameter **<n>**

3.5.7.3. AT Run Commands

3.5.7.3.1. Enable SMS Run AT Service - #SMSATRUN

#SMSATRUN – Enable SMS AT Run service	**SELINT 2**
AT#SMSATRUN= <mod>	Set command enables/disables the SMS AT RUN service. Parameter: **< mod >** 0: Service Disabled 1: Service Enabled Note1: When the service is active on a specific AT instance (see AT#SMSATRUNCFG), that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected. Note2: the current settings are stored in NVM.
AT#SMSATRUN?	Read command returns the current settings of <mode> and the value of <stat> in the format: **# SMSATRUN: <mod>,<stat>** where: **<stat>** - service status 0 – not active 1 - active
AT#SMSATRUN =?	Test command returns the supported values for the SMSATRUN parameters
Notes:	• By default the SMS ATRUN service is disabled It can be activated by the command AT#SMSATRUN.

3.5.7.3.2. Set SMS Run AT Service parameters - #SMSATRUNCFG

#SMSATRUNCFG – Set SMS AT Run Parameters	
AT#SMSATRUNCFG= <instance> [,<urcmod> [,<timeout>]]	Set command configures the SMS AT RUN service. Parameter: **<instance>:** AT instance that will be used by the service to run the AT Command. Range 2 – 5, default 3. **<urcmod>:** 0 – disable unsolicited message 1 - enable an unsolicited message when an AT command is

#SMSATRUNCFG – Set SMS AT Run Parameters	
	requested via SMS (default). When unsolicited is enabled, the AT Command requested via SMS is indicated to TE with unsolicited result code: #SMSATRUN: <Text> e.g.: #SMSATRUN: AT+CGMR;+CGSN;+GSN;+CCLK Unsolicited is dumped on the instance that requested the service activation. **<timeout>:** It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. Range 1 – 60, default 5. Note 1: the current settings are stored in NVM. Note 2: the instance used for the SMS AT RUN service is the same used for the EvMoni service. Therefore, when the #SMSATRUNCFG sets the <instance> parameter, the change is reflected also in the <instance> parameter of the #ENAEVMONICFG command, and viceversa. Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as <mod> parameter or the command AT#SMSATRUN? returns 1 as <mod> parameter
AT#SMSATRUNCFG?	Read command returns the current settings of parameters in the format: **#SMSATRUNCFG:<instance>,<urcmod>,<timeout>**
AT#SMSATRUNCFG=?	Test command returns the supported values for the SMSATRUNCFG parameters

3.5.7.3.3. SMS AT Run White List - #SMSATWL

#SMSATWL – SMS AT Run White List	SELINT 2
AT#SMSATWL= <action> ,<index> [,<entryType> [,<string>]]	Set command to handle the white list. **<action >:** 0 – Add an element to the WhiteList 1 – Delete an element from the WhiteList 2 – Print and element of the WhiteList **< index >:** Index of the WhiteList. Range 1-8 **< entryType >:**

#SMSATWL – SMS AT Run White List	SELINT 2
	0 – Phone Number 1 – Password NOTE: A maximum of two Password Entry can be present at same time in the white List **<string>:** string parameter enclosed between double quotes containing or the phone number or the password Phone number shall contain numerical characters and/or the character "+" at the beginning of the string and/or the character "*" at the end of the string. Password shall be 16 characters length NOTE: When the character "*" is used, it means that all the numbers that begin with the defined digit are part of the white list. E.g. "+39*" All Italian users can ask to run AT Command via SMS "+39349*" All vodafone users can ask to run AT Command via SMS.
AT#SMSATWL?	Read command returns the list elements in the format: **#SMSATWL: [<entryType>,<string>]**
AT#SMSATWL=?	Test command returns the supported values for the parameter **<action>, <index>** and **<entryType>**

3.5.7.3.4. Set TCP Run AT Service parameter - #TCPATRUNCFG

#TCPATRUNCFG – Set TCP AT Run Service Parameters	SELINT 2
AT#TCPATRUNCFG= **<connId>** **,<instance>** **,<tcpPort>** **,<tcpHostPort>** **,<tcpHost>** **[,<urcmod>** **[,<timeout>** **[,<authMode>** **[,<retryCnt>** **[,<retryDelay>]]]]]**	Set command configures the TCP AT RUN service Parameters: **<connId>** socket connection identifier. Default 1. Range 1..6. This parameter is mandatory. **<instance>:** AT instance that will be used by the service to run the AT Command. Default 2. Range 2 – 5. This parameter is mandatory. **<tcpPort>** Tcp Listen port for the connection to the service in server mode. Default 1024. Range 1...65535. This parameter is mandatory. **<tcpHostPort>**

#TCPATRUNCFG – Set TCP AT Run Service Parameters	SELINT 2
	Tcp remote port of the Host to connect to, in client mode. Default 1024. Range 1...65535. This parameter is mandatory. **<tcpHost>** IP address of the Host, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx.xxx" - any host name to be solved with a DNS query This parameter is mandatory. Default "". **<urcmod>:** 0 – disable unsolicited messages 1 - enable an unsolicited message when the TCP socket is connected or disconnect (default). When unsolicited is enabled, an asynchronous TCP Socket connection is indicated to TE with unsolicited result code: #TCPATRUN: <iphostaddress> When unsolicited is enabled, the TCP socket disconnection is indicated to TE with unsolicited result code: #TCPATRUN: <DISCONNECT> Unsolicited is dumped on the instance that requested the service activation. **<timeout>:** Define in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. The default value is 5 minutes. Range 1…5. **<authMode>:** determines the authentication procedure in server mode: 0 – (default) when connection is up, username and password (in this order and each of them followed by a Carriage Return) have to be sent to the module before the first AT command. 1 – when connection is up, the user receives a request for username and, if username is correct, a request for password. Then a message of "Login successfull" will close authentication phase. Note: if username and/or password are not allowed (see AT#TCPATRUNAUTH) the connection will close immediately. **<retryCnt>:**

#TCPATRUNCFG – Set TCP AT Run Service Parameters	SELINT 2
	in client mode, at boot or after a socket disconnection, this parameter represents the number of attempts that are made in order to re-connect to the Host. Default: 0. Range 0…5. **<retryDelay>:** in client mode, delay between one attempt and the other. In minutes. Default: 2. Range 1…3600. Note2: the current settings are stored in NVM. Note3: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command). Note 4: the set command returns ERROR if the command AT#TCPATRUNL? returns 1 as <mod> parameter or the command AT# TCPATRUND? returns 1 as <mod> parameter
AT#TCPATRUNCFG?	Read command returns the current settings of parameters in the format: **#TCPATRUNCFG: <connId>,<instance>,<tcpPort>,<tcpHostPort>,<tcpHost>,<urcmod>,<timeout>,<authMode>,<retryCnt>,<retryDelay>**
AT#TCPATRUNCFG=?	Test command returns the supported values for the TCPATRUNCFG parameters

3.5.7.3.5. TCP Run AT Service in listen (server) mode - #TCPATRUNL

#TCPATRUNL– Enables TCP AT Run Service in listen (server) mode	SELINT 2
AT#TCPATRUNL= <mod>	Set command enables/disables the TCP AT RUN service in server mode. When this service is enabled, the module tries to put itself in TCP listen state. Parameter: **< mod >** 0: Service Disabled 1: Service Enabled Note1: If SMSATRUN is active on the same instance (see AT#TCPATRUNCFG) the command will return ERROR. Note2: when the service is active it is on a specific AT instance (see AT#TCPATRUNCFG), that instance cannot be used for any other scope. For example, if the multiplexer requests to establish the Instance, the request will be rejected.

#TCPATRUNL– Enables TCP AT Run Service in listen (server) mode	SELINT 2
	Note3: the current settings are stored in NVM. Note4: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).
AT#TCPATRUNL?	Read command returns the current settings of <mode> and the value of <stat> in the format: **#TCPATRUNL: <mod>,<stat>** where: **<stat>** - connection status 0 – not in listen 1 - in listen or active
AT#TCPATRUNL =?	Test command returns the supported values for the TCPATRUNL parameters

3.5.7.3.6. TCP AT Run Firewall List - #TCPATRUNFRWL

# TCPATRUNFRWL – TCP AT Run Firewall List	SELINT 2
AT#*TCPATRUNFRWL* = <action>, <ip_addr>, <net_mask>	Set command controls the internal firewall settings for the TCPATRUN connection. Parameters: **<action>** - command action 0 - remove selected chain 1 - add an **ACCEPT** chain 2 - remove all chains (**DROP** everything); **<ip_addr>** and **<net_mask>** has no meaning in this case. **<ip_addr>** - remote address to be added into the **ACCEPT** chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx **<net_mask>** - mask to be applied on the **<ip_addr>**; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx Command returns **OK** result code if successful. Firewall general policy is **DROP**, therefore all packets that are not included into an **ACCEPT** chain rule will be silently discarded. When a packet comes from the IP address **incoming_IP**, the firewall chain rules will be scanned for matching with the following criteria: **incoming_IP & <net_mask> = <ip_addr> & <net_mask>**

# TCPATRUNFRWL – TCP AT Run Firewall List	SELINT 2
	If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped. Note1: A maximum of 5 firewall can be present at same time in the List. Note2: the firewall list is saved in NVM
AT# TCPATRUNFRWL?	Read command reports the list of all **ACCEPT** chain rules registered in the Firewall settings in the format: **#TCPATRUNFRWL: <ip_addr>,<net_mask>** **#TCPATRUNFRWL: <ip_addr>,<net_mask>** **…** **OK**
AT#TCPATRUNFRWL=?	Test command returns the allowed values for parameter **<action>.**

3.5.7.3.7. TCP AT Run Authentication Parameters List - #TCPATRUNAUTH

# TCPATRUNAUTH – TCP AT Run Authentication Parameters List	SELINT 2
AT# *TCPATRUNAUTH* = **<action>,** **<userid>,** **<passw>**	Execution command controls the authentication parameters for the TCPATRUN connection. Parameters: **<action>** - command action 0 - remove selected chain 1 - add an **ACCEPT** chain 2 - remove all chains (**DROP** everything); **< userid >** and **< passw >** has no meaning in this case. **< userid >** - user to be added into the **ACCEPT** chain; string type, maximum length 50 **< passw >** - password of the user on the **< userid >**; string type, maximum length 50 Command returns **OK** result code if successful. Note1: A maximum of 3 entry (password and userid) can be present at same time in the List. Note2: the Authentication Parameters List is saved in NVM.
AT#*TCPATRUNAUTH*?	Read command reports the list of all ACCEPT chain rules registered in the Authentication settings in the format: **#TCPATRUNAUTH: <user_id>,<passw>** **#TCPATRUNAUTH: <user_id>,<passw>**

# TCPATRUNAUTH – TCP AT Run Authentication Parameters List	SELINT 2
	…. OK
AT#*TCPATRUNAUTH* =?	Test command returns the allowed values for parameter **<action>**.

3.5.7.3.8. TCP AT Run in dial (client) mode - #TCPATRUND

#TCPATRUND – Enables TCP Run AT Service in dial (client) mode	SELINT 2
AT#TCPATRUND=<mod>	Set command enables/disables the TCP AT RUN service in client mode. When this service is enabled, the module tries to open a connection to the Host (the Host is specified in AT#TCPATRUNCFG). Parameter: **< mod >** 0: Service Disabled 1: Service Enabled Note1: If SMSATRUN is active on the same instance (see AT#TCPATRUNCFG) the command will return ERROR. Note2: when the service is active it is on a specific AT instance (see AT#TCPATRUNCFG), that instance cannot be used for any other scope. For example if the multiplexer request to establish the Instance, the request will be rejected. Note3: the current setting are stored in NVM Note4: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command). Note5: if the connection closes or at boot, if service is enabled and context is active, the module will try to reconnect for the number of attempts specified in AT#TCPATRUNCFG; also the delay between one attempt and the other will be the one specified in AT#TCPATRUNCFG.
AT# TCPATRUND?	Read command returns the current settings of <mode> and the value of <stat> in the format: **#TCPATRUND: <mod>,<stat>** where: **<stat>** - connection status 0 - not connected 1 – connected or connecting at socket level 2 - not connected but still trying to connect, attempting every delay time (specified in AT#TCPATRUNCFG)

#TCPATRUND – Enables TCP Run AT Service in dial (client) mode	SELINT 2
AT#TCPATRUND =?	Test command returns the supported values for the TCPATRUND parameters

3.5.7.3.9. Closing TCP Run AT Socket - #TCPATRUNCLOSE

#TCPATRUNCLOSE – Closes TCP Run AT Socket	SELINT 2
AT#TCPATRUNCLOSE	Closes the socket used by TCP ATRUN service. Note: TCP ATRUN status is still enabled after this command, so the service re-starts automatically.
AT#TCPATRUNCLOSE =?	Test command returns OK

3.5.7.3.10. TCP AT Run Command Sequence - #TCPATCMDSEQ

#TCPATCMDSEQ – For TCP Run AT Service, allows the user to give AT commands in sequence	SELINT 2
AT#TCPATCMDSEQ= <mod>	Set command enable/disable, for TCP Run AT service, a feature that allows giving more than one AT command without waiting for responses. It does not work with commands that uses the prompt '>' to receive the message body text (e.g. “at+cmgs”, “at#semail”) Parameter: **< mod >** 0: Service Disabled (default) 1: Service Enabled
AT# TCPATCMDSEQ?	Read command returns the current settings of parameters in the format: **#TCPATCMDSEQ: <mod>**
AT# TCPATCMDSEQ =?	Test command returns the supported values for the TCPATCMDSEQ parameters

3.5.7.3.11. TCP Run AT service to a serial port - #TCPATCONSER

#TCPATCONSER – Connects the TCP Run AT service to a serial port	SELINT 2
AT#TCPATCONSER= <port>,<rate>	Set command sets the TCP Run AT in transparent mode, in order to have direct access to the serial port specified. Data will be transferred directly, without being elaborated, between the TCP Run AT service and the serial port specified. If the CMUX protocol is running the command will return ERROR. Parameter: **< port >** 0 – 1. Serial port to connect to.

#TCPATCONSER – Connects the TCP Run AT service to a serial port	SELINT 2
	< rate > baud rate for data transfer. Allowed values are 300,1200,2400,4800,9600,19200,38400,57600,115200. Note1: the command has to be issued from the TCP ATRUN instance Note2: After this command has been issued, if no error has occurred, then a "CONNECT" will be returned by the module to advise that the TCP ATRUN instance is in *online mode* and connected to the port specified. Note3: To exit from online mode and close the connection, the escape sequence (+++) has to be sent on the TCP ATRUN instance
AT# TCPATCONSER =?	Test command returns the supported values for the TCPATCONSER parameters

3.5.7.3.12. Run AT command execution - #ATRUNDELAY

#ATRUNDELAY – Set the delay on Run AT command execution	SELINT 2
AT#ATRUNDELAY= <srv>,<delay>	Set command enables the use of a delay before the execution of AT command received by Run AT service (TCP and SMS). It affects just AT commands given through Run AT service. **<srv>** 0 – TCP Run AT service 1 - SMS Run AT service **<delay>** Value of the delay, in seconds. Range 0..30. Default value 0 for both services (TCP and SMS). Note1 - The use of the delay is recommended to execute some AT commands that require network interaction or switch between GSM and GPRS services. For more details see the RUN AT User Guide. Note2: The delay is valid till a new AT#ATRUNDELAY is set.
AT#ATRUNDELAY?	Read command returns the current settings of parameters in the format: **#ATRUNDELAY: 0, <delayTCP>** **#ATRUNDELAY: 1, <delaySMS>** **OK**
AT#ATRUNDELAY=?	Test command returns the supported values for the ATRUNDELAY parameters

3.5.7.4. Event Monitor Commands

3.5.7.4.1. Enable EvMoni Service - #ENAEVMONI

#ENAEVMONI – Enable EvMoni Service	SELINT 2
AT#ENAEVMONI= <mod>	Set command enables/disables the EvMoni service. Parameter: **< mod >** 0: Service Disabled (default) 1: Service Enabled Note1: When the service is active on a specific AT instance, that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected. Note2: the current settings are stored in NVM.
AT#ENAEVMONI?	Read command returns the current settings of <mode> and the value of <stat> in the format: **# ENAEVMONI: <mod>,<stat>** where: **<stat>** - service status 0 – not active (default) 1 - active
AT#ENAEVMONI =?	Test command returns the supported values for the ENAEVMONI parameters

3.5.7.4.2. EvMoni Service parameter - #ENAEVMONICFG

#ENAEVMONICFG – Set EvMoni Service Parameters	SELINT 2
AT#ENAEVMONICFG= <instance> [,<urcmod> [,<timeout>]]	Set command configures the EvMoni service. Parameter: **<instance>:** AT instance that will be used by the service to run the AT Command. Range 2 – 5. (Default: 3) **<urcmod>:** 0 – disable unsolicited message 1 - enable an unsolicited message when an AT command is executed after an event is occurred (default) When unsolicited is enabled, the AT Command is indicated to TE with unsolicited result code:

#ENAEVMONICFG – Set EvMoni Service Parameters	SELINT 2
	#EVMONI: <Text> e.g.: #EVMONI: AT+CGMR;+CGSN;+GSN;+CCLK Unsolicited is dumped on the instance that requested the service activation. **<timeout>:** It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. (Default: 5) Note 1: the current settings are stored in NVM. Note 2: the instance used for the EvMoni service is the same used for the SMS AT RUN service. Therefore, when the #ENAEVMONICFG sets the <instance> parameter, the change is reflected also in the <instance> parameter of the #SMSATRUNCFG command, and viceversa. Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as <mod> parameter or the command AT#SMSATRUN? returns 1 as <mod> parameter
AT#ENAEVMONICFG?	Read command returns the current settings of parameters in the format: **#ENAEVMONICFG:<instance>,<urcmod>,<timeout>**
AT# ENAEVMONICFG =?	Test command returns the supported values for the ENAEVMONICFG parameters

3.5.7.4.3. Event Monitoring - #EVMONI

#EVMONI – Set the single Event Monitoring	SELINT 2
AT#EVMONI= <label>, <mode>, [,<paramType > ,<param>]	Set command enables/disables the single event monitoring, configures the related parameter and associates the AT command **<label>:** string parameter (that has to be enclosed between double quotes) indicating the event under monitoring. It can assume the following values: • VBATT - battery voltage monitoring (not yet implemented) • DTR - DTR monitoring (not yet implemented) • ROAM - roaming monitoring • CONTDEACT - context deactivation monitoring • RING - call ringing monitoring • STARTUP – module start-up monitoring • REGISTERED – network registration monitoring • GPIO1 – monitoring on a selected GPIO in the GPIO range • GPIO2 – monitoring on a selected GPIO in the GPIO range

#EVMONI – Set the single Event Monitoring	SELINT 2

- GPIO3 – monitoring on a selected GPIO in the GPIO range
- GPIO4 – monitoring on a selected GPIO in the GPIO range
- GPIO5 – monitoring on a selected GPIO in the GPIO range
- ADCH1 – ADC High Voltage monitoring
- ADCL1 – ADC Low Voltage monitoring
- DTMF1 –monitoring on user defined DTMF string
- DTMF2 –monitoring on user defined DTMF string
- DTMF3 –monitoring on user defined DTMF string
- DTMF4 –monitoring on user defined DTMF string
- SMSIN – monitoring on incoming SMS
- CONSUME1 – used to define an action to be used in consume functionality (see parameter **<action_id>** in **#CONSUMECFG** command)
- CONSUME2 – used to define an action to be used in consume functionality (see parameter **<action_id>** in **#CONSUMECFG** command)
- CONSUME3 – used to define an action to be used in consume functionality (see parameter **<action_id>** in **#CONSUMECFG** command)
- CONSUME4 – used to define an action to be used in consume functionality (see parameter **<action_id>** in **#CONSUMECFG** command)
- CONSUME5 – used to define an action to be used in consume functionality (see parameter **<action_id>** in **#CONSUMECFG** command)

<mode>:
0 – disable the single event monitoring (default)
1 – enable the single event monitoring

< paramType >: numeric parameter indicating the type of parameter contained in **<param>**. The 0 value indicates that **<param>** contains the AT command string to execute when the related event has occurred. Other values depend from the type of event.

<param>: it can be a numeric or string value depending on the value of **<paramType>** and on the type of event.
If **<paramType>** is 0, then **<param>** is a string containing the AT command:

- It has to be enclosed between double quotes
- It has to start with the 2 chars AT (or at)
- If the string contains the character ”, then it has to be replaced with the 3 characters \22
- the max string length is 96 characters
- if it is an empty string, then the AT command is erased

- If **<label>** is VBATT, **<paramType>** can assume values in the range 0 - 2.
  - if **<paramType>** = 1, **<param>** indicates the battery voltage threshold in the range 0 – 500, where one unit corresponds to 10 mV (therefore 500 corresponds to 5 V). (Default: 0)

#EVMONI – Set the single Event Monitoring	SELINT 2

- if **<paramType>** = 2, **<param>** indicates the time interval in seconds after that the voltage battery under the value specified with **<paramType>** = 1 causes the event. The range is 0 – 255. (Default: 0)

- If **<label>** is DTR, **<paramType>** can assume values in the range 0 - 2.
  - if **<paramType>** = 1, **<param>** indicates the status high or low under monitoring. The values are 0 (low) and 1 (high). (Default: 0)
  - if **<paramType>** = 2, **<param>** indicates the time interval in seconds after that the DTR in the status specified with **<paramType>** = 1 causes the event. The range is 0 – 255. (Default: 0)
- If **<label>** is ROAM, **<paramType>** can assume only the value 0. The event under monitoring is the roaming state.
- If **<label>** is CONTDEACT, **<paramType>** can assume only the value 0. The event under monitoring is the context deactivation.
- If **<label>** is RING, **<paramType>** can assume values in the range 0 - 1.
  - if **<paramType>** = 1, **<param>** indicates the numbers of call rings after that the event occurs. The range is 1-50. (Default: 1)
- If **<label>** is STARTUP, **<paramType>** can assume only the value 0. The event under monitoring is the module start-up.
- If **<label>** is REGISTERED, **<paramType>** can assume only the value 0. The event under monitoring is the network registration (to home network or in roaming) after the start-up and the SMS ordening.
- If **<label>** is GPIOX, **<paramType>** can assume values in the range 0 - 3.
  - if **<paramType>** = 1, **<param>** indicates the GPIO pin number; supported range is from 1 to a value that depends on the hardware. (Default: 1)
  - if **<paramType>** = 2, **<param>** indicates the status high or low under monitoring. The values are 0 (low) and 1 (high) . (Default: 0)
  - if **<paramType>** = 3, **<param>** indicates the time interval in seconds after that the selected GPIO pin in the status specified with **<paramType>** = 1 causes the event. The range is 0 – 255. (Default: 0)
- If **<label>** is ADCH1, **<paramType>** can assume values in the range 0 - 3.
  - if **<paramType>** = 1, **<param>** indicates the ADC pin number; supported range is from 1 to a value that depends on the hardware. (Default: 1)
  - if **<paramType>** = 2, **<param>** indicates the ADC High voltage threshold in the range 0 – 2000 mV. (Default: 0)
  - if **<paramType>** = 3, **<param>** indicates the time interval in seconds after that the selected ADC pin above the value specified with **<paramType>** = 1 causes the event. The range is 0 – 255. (Default: 0)
- If **<label>** is ADCL1, **<paramType>** can assume values in the range 0 - 3.
  - if **<paramType>** = 1, **<param>** indicates the ADC pin number; supported range is from 1 to a value that depends on the hardware.

#EVMONI – Set the single Event Monitoring	SELINT 2
	(Default: 1) o if **<paramType>** = 2, **<param>** indicates the ADC Low voltage threshold in the range 0 – 2000 mV. (Default: 0) o if **<paramType>** = 3, **<param>** indicates the time interval in seconds after that the selected ADC pin under the value specified with **<paramType>** = 1 causes the event. The range is 0 – 255. (Default: 0) • If **<label>** is DTMFX, **<paramType>** can assume values in the range 0 - 2. o if **<paramType>** = 1, **<param>** indicates the DTMF string; the single DTMF characters have to belong to the range ((0-9),#,*,(A-D)); the maximum number of characters in the string is 15 o if **<paramType>** = 2, **<param>** indicates the timeout in milliseconds. It is the maximum time interval within which a DTMF tone must be detected after detecting the previous one, to be considered as belonging to the DTMF string. The range is (500 – 5000). (Default: 1000) • If **<label>** is SMSIN, **<paramType>** can assume values in the range 0-1. o if **<paramType>** = 1, **<param>** indicates the text that must be received in incoming SMS to trigger AT command execution rings after that the event occurs; the maximum number of characters in the SMS text string is 15. If no text is specified, AT command execution is triggered after each incoming SMS • If **<label>** is CONSUMEX, **<paramType>** can assume only the value 0. Note: the DTMF string monitoring is available only if the DTMF decode has been enabled (see **#DTMF** command)
AT# EVMONI?	Read command returns the current settings for each event in the format: **#EVMONI: <label>,<mode>,<param0>[,<param1>[,<param2>[,<param3>]]]** Where **<param0>**, **<param1>**, **<param2>** and **<param3>** are defined as before for **<param>** depending on **<label>** value
AT#EVMONI=?	Test command returns values supported as a compound value

3.5.7.4.4. Send Message - #CMGS

#CMGS - Send Message	SELINT 2
(PDU Mode) **AT#CMGS= <length>,<pdu>**	**(PDU Mode)** Execution command sends to the network a message. Parameter: **<length>** - length of the PDU to be sent in bytes (excluding the SMSC address octets). 7..164

#CMGS - Send Message	SELINT 2
	<pdu> - PDU in hexadecimal format (each octet of the PDU is given as two IRA character long hexadecimal number) and given in one line. Note: when the length octet of the SMSC address (given in the **<pdu>**) equals zero, the SMSC address set with command **+CSCA** is used; in this case the SMSC Type-of-Address octet shall not be present in the **<pdu>**. If message is successfully sent to the network, then the result is sent in the format: **#CMGS: <mr>** where **<mr>** - message reference number; 3GPP TS 23.040 TP-Message-Reference in integer format. Note: if message sending fails for some reason, an error code is reported.
(Text Mode) **AT#CMGS=<da>** **,<text>**	**(Text Mode)** Execution command sends to the network a message. Parameters: **<da>** - destination address, string type represented in the currently selected character set (see **+CSCS**). **<text>** - text to send The entered text should be enclosed between double quotes and formatted as follows: - if current **<dcs>** (see **+CSMP**) indicates that GSM03.38 default alphabet is used and current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A. - if current **<dcs>** (see **+CSMP**) indicates that 8-bit or UCS2 data coding scheme is used or current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the **'asterisk'** will be entered as **2A** (**IRA50** and **IRA65**) and this will be converted to an octet with integer value **0x2A**) If message is successfully sent to the network, then the result is sent in the format: **#CMGS: <mr>** where **<mr>** - message reference number; 3GPP TS 23.040 TP-Message-Reference

#CMGS - Send Message	SELINT 2
	in integer format. Note: if message sending fails for some reason, an error code is reported.
AT#CMGS=?	Test command resturns the **OK** result code.
Note	To avoid malfunctions is suggested to wait for the **#CMGS: <mr>** or **#CMS ERROR: <err>** response before issuing further commands.
Reference	GSM 27.005

3.5.7.4.5. Write Message To Memory - #CMGW

#CMGW - Write Message To Memory	SELINT 2
(PDU Mode) **AT#CMGW= <length>,<pdu>**	**(PDU Mode)** Execution command writes in the **<memw>** memory storage a new message. Parameter: **<length>** - length in bytes of the PDU to be written. 7..164 **<pdu>** - PDU in hexadecimal format (each octet of the PDU is given as two IRA character long hexadecimal number) and given in one line. If message is successfully written in the memory, then the result is sent in the format: **#CMGW: <index>** where: **<index>** - message location index in the memory **<memw>**. If message storing fails for some reason, an error code is reported.
(Text Mode) **AT#CMGW=<da> ,<text>**	**(Text Mode)** Execution command writes in the **<memw>** memory storage a new message. Parameters: **<da>** - destination address, string type represented in the currently selected character set (see **+CSCS**). **<text>** - text to write The entered text should be enclosed between double quotes and formatted as follows: - if current **<dcs>** (see **+CSMP**) indicates that GSM03.38 default alphabet is used and current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered

#CMGW - Write Message To Memory	SELINT 2
	text into GSM alphabet, according to GSM 27.005, Annex A. - if current **<dcs>** (see **+CSMP**) indicates that 8-bit or UCS2 data coding scheme is used or current **<fo>** (see **+CSMP**) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the **'asterisk'** will be entered as **2A** (**IRA50** and **IRA65**) and this will be converted to an octet with integer value **0x2A**) If message is successfully written in the memory, then the result is sent in the format: **#CMGW: <index>** where: **<index>** - message location index in the memory **<memw>**. If message storing fails for some reason, an error code is reported.
AT#CMGW=?	Test command returns the **OK** result code.
Reference	GSM 27.005
Note	To avoid malfunctions is suggested to wait for the **#CMGW: <index>** or **+CMS ERROR: <err>** response before issuing further commands.

3.5.7.5. CONSUME Commands

3.5.7.5.1. Configure consume parameters - #CONSUMECFG

#CONSUMECFG – configure consume parameters	**SELINT 2**
AT#CONSUMECFG=<rule_id>[,<service_type>[,<rule_enable>[,<period>[,<limit_amount>[,<action_id>]]]]]	This command sets the parameters related to the consume functionality Parameters: **<rule_id>** Index of the rule to apply to a defined **<service_type>** Range: (0-10) The available rules are 10 and their identifier ranges from 1 to 10. The special case of **<rule_id>**=0 is explained below in a note. **<service_type>** Type of service to count: 0 – No service (default) 1 – SMS Sent 2 – SMS Received 3 – Total SMS 4 – CS MO Calls 5 – CS MT Calls 6 – Total CS Calls 7 – IP All Data Sent 8 – IP All Data Received 9 – IP All Data 10 – IP All Data Sent (with Header) 11 – IP All Data Received (with Header) 12 – IP All Data (with Header) **<rule_enable>** Enable the counter on the rule 0 – rule disabled (default) 1 – rule enabled **<period>** Time period over which the service type data are counted: 0 – life (entire module life) (default) 1 – 8760 (hours) **<limit_amount>** Limit amount of data to count. 0 is default value and means no set limit: in this case only the counter is active. 0 – 4294967295 KBytes, for **<service_type>**=7,8,9,10,11 and 12 0 – 65535 number of SMS, for **<service_type>**=1,2, and 3 0 – 65535 minutes, for **<service_type>**=4,5 and 6

	<action_id> Identifier of the action to trigger when the threshold limit has been reached. It corresponds to the AT command associated to the event CONSUMEX, where X=1,…5. (Refer to **#EVMONI** command) Range: (0-5); 0 means no action associated: in this case only the counter is active. Note: the Set command **#CONSUMECFG=0** has a special behaviour: for all the enabled rules, the data and time of related counters are reset (if they are not-life counters) Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance Note: the life counters are disabled if <**enable**> parameter of **AT#ENACONSUME** is equal to 0 Note: a rule can be changed only setting **<rule_enable>**=0. The data and time of related counter are also reset (if it's not a life counter). Note: when the period expires, the counted data are reset, so the counting in the next period starts from 0. Note: if a service is blocked, then the related (life or not) counter is stopped also in terms of time (as well as in terms of data obviously).
AT#CONSUMECFG?	Read command returns the current settings for each rule in the format: **#CONSUMECFG: <rule_id>,<service_type>,<rule_enable>,<period>,<limit_amount>,<action_id>**
AT#CONSUMECFG=?	Test command reports the supported range of values for all parameters

3.5.7.5.2. Enable consume functionality - #ENACONSUME

#ENACONSUME – enable consume functionality	**SELINT 2**
AT#ENACONSUME=<enable>[,<storing_mode>[,<storing_period>]]	Set command enables/disables the consume functionality. Parameters: **<enable>** 0 – disable consume functionality (default) 1 – disable consume functionality except life counters 2 – enable consume functionality **<storing_mode>:**

	0 – the counters are saved in NVM at every shuthdown (default) 1 – the counters are saved in NVM at every shuthdown and periodically at regular intervals specified by **<storing_period>** parameter **<storing_period>** - number of hours after that the counters are saved; numeric value in hours; range (0,8-24); 0 is default value and means no set period (as **<storing_mode>**=0) Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance Note: when the functionality is disabled with **<enable>**=0, the data counters are stopped but not reset: to reset them (except life counters) set **<rule_enable>**=0 with **AT#CONSUMECFG** command. Note: when the functionality is disabled with **<enable>**=1, the data counters are stopped except life counters. Note: the life counters are never reset, neither in terms of counted data nor in terms of time
AT#ENACONSUME?	Read command returns the current settings for all parameters in the format: **#ENACONSUME: <enable>,<storing_mode>,<storing_period>**
AT#ENACONSUME=?	Test command reports the supported range of values for all parameters

3.5.7.5.3. Report consume statistics - #STATSCONSUME

#STATSCONSUME – report consume statistics	**SELINT 2**
AT#STATSCONSUME[=<counter_type>]	Execution command reports the values of the life counters for every type of service or the values of period counters for every rule. Parameter: **<counter_type>** Type of counter: range (0-1) 0 – period counter: the command returns the values of period counters for every rule defined with **AT#CONSUMECFG** command in the format: **#STATSCONSUME: <rule_1>,<service_type>,<counted_data>,<threshold>,<current_time>,<period><CR><LF>#STATSCONSUME: <rule_2>,<service_type>,<counted_data>,<threshold>,<current_time>,<period><CR><LF>….<CR><LF>>#STATSCONSUME:**

	<rule_10>,<service_type>,<counted_data>,<threshold>,<current_time>,<period> where **<rule_i>** Index of the rule defined with **AT#CONSUMECFG** **<service_type>** Type of service: 1 – SMS Sent 2 – SMS Received 3 – Total SMS 4 – CS MO Calls 5 – CS MT Calls 6 – Total CS Calls 7 – IP All Data Sent 8 – IP All Data Received 9 – IP All Data 10 – IP All Data Sent (with Header) 11 – IP All Data Received (with Header) 12 – IP All Data (with Header) **<counted_data>** Number of data counted during **<current_time>** **<threshold>** Limit amount of data to count (set in parameter **<limit_amount>** with **AT#CONSUMECFG**) **<current_time>** Number of passed hours in the current **<period>** **<period>** Number of total hours in the period where the data are counted (corresponds to the value set in **<period>** with **AT#CONSUMECFG**) 1 – life counter: the command returns the values of life counters for every service type in the format: **#STATSCONSUME: <service_1>,<life_data>,<current_time><CR><LF>#STATSCONSUME: <service_2>,<life_data>,<current_time><CR><LF>…<CR><LF>#STATSCONSUME: <service_12>,<life_data>,<current_time>** where **<service_i>** is defined as **<service_type>** above

	<life_data> Number of data counted during entire life time period **<current_time>** Number of passed hours during entire life time period Note: issuing **AT#STATSCONSUME** without parameters has the same effect as **AT#STATSCONSUME**=0 Note: the unit of measurement for the service are the following: 0 – 4294967295 KBytes, for **<service_type>**=7,8,9,10,11 and 12 0 – 65535 number of SMS, for **<service_type>**=1,2, and 3 0 – 65535 minutes, for **<service_type>**=4,5 and 6
AT#STATSCONSUME=?	Test command reports the supported range of values for **<counter_type>** parameter

3.5.7.5.4. Block/unblock a type of service - #BLOCKSCONSUME

#BLOCKCONSUME – block/unblock a type of service	**SELINT 2**
AT#BLOCKCONSUME=<service_type>,<block>	Execution command blocks/unblocks a type of service Parameter: **<service_type>** Type of service: 1 – SMS Sending 2 – SMS Receiving 3 – SMS Sending/ Receiving 4 – CS MO Calls 5 – CS MT Calls 6 – MO/MT CS Calls 7 – IP Data **<block>** 0 – unblock the service specified in **<service_type>** 1 – block the service specified in **<service_type>** Note: even if the service “SMS Received” has been blocked, an SMS ATRUN digest SMS can be received and managed. Note: the type of service 7 “IP Data” comprises all the IP services (i.e. IP ,with or without header, sent, receive and sent/receive data)
AT#BLOCKCONSUME?	Read command reports the status blocked/unblocked of every type of service in the following format: **#BLOCKCONSUME: <service_type>,<block>**

AT#BLOCKCONSUME=?	Test command reports the supported range of values for **<service_type>** and **<block>** parameters

3.5.7.6. FOTA Commands

3.5.7.6.1. OTA Set Network Access Point - #OTASNAP

#OTASNAP – OTA Set Network Access Point	**SELINT 0/1**
AT#OTASNAP=<addr>[,<company_name>]	Set command specifies the SMS number that the module has to use to send the Remote Registration SM. If the current IMSI hasn't been yet registered, the Remote Registration SM is automatically sent. Parameters: **<addr>** - string parameter which specifies the phone number **<company_name>** - string parameter containing a client identifier Note1: a special form of the Set command, **#OTASNAP=""**, causes the deletion of the SMS number Note2: the value of **<addr>** parameter can be overwritten from the OTA server by the Provisioning SMS Note3: a change of the value of **<company_name>** parameter causes a new FOTA Registration procedure Note4: if the **<company_name>** is an empty string, an ERROR is returned Note5: the setting is saved in NVM
AT#OTASNAP?	Read command reports the current settings in the format: **#OTASNAP: <addr>[,<company_name>]**
AT#OTASNAP	Execution command has the same effect as the Read command
AT#OTASNAP =?	Test command returns the maximum length of **<addr>** field and maximum length of **<company_name>** field. The format is: **#OTASNAP: <nlength>,<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<addr>** **<tlength>** - integer type value indicating the maximum length of field **<company_name>**
Example	AT#OTASNAP="*SMS* Number","*Client Alpha*" OK AT#OTASNAP? #OTASNAP:"*SMS Number*","*Client Alpha*" OK

#OTASNAP – OTA Set Network Access Point	SELINT 0/1
	AT#OTASNAP=? #OTASNAP: 21,15 OK

#OTASNAP – OTA Set Network Access Point	SELINT 2
AT#OTASNAP=<addr>[,<company_name>]	Set command specifies the SMS number that the module has to use to send the Remote Registration SM. If the current IMSI hasn't been yet registered, the Remote Registration SM is automatically sent. Parameters: **<addr>** - string parameter which specifies the phone number **<company_name>** - string parameter containing a client identifier Note1: a special form of the Set command, **#OTASNAP=""**, causes the deletion of the SMS number Note2: the value of **<addr>** parameter can be overwritten from the OTA server by the Provisioning SMS Note3: a change of the value of **<company_name>** parameter causes a new FOTA Registration procedure Note4: if the **<company_name>** is an empty string, an ERROR is returned Note5: the setting is saved in NVM
AT#OTASNAP?	Read command reports the current settings in the format: **#OTASNAP: <addr>[,<company_name>]**
AT#OTASNAP =?	Test command returns the maximum length of **<addr>** field and maximum length of **<company_name>** field. The format is: **#OTASNAP: <nlength>,<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<addr>** **<tlength>** - integer type value indicating the maximum length of field **<company_name>**
Example	AT#OTASNAP="*SMS* Number","*Client Alpha*" OK AT#OTASNAP? #OTASNAP:"*SMS Number*","*Client Alpha*" OK AT#OTASNAP=? #OTASNAP: 21,15 OK

3.5.7.6.2. OTA Set User Answer - #OTASUAN

#OTASUAN – OTA Set User Answer	SELINT 0/1
AT#OTASUAN=<response>[,<mode>[,<bfr>]]	Set command: a) enables or disables sending of unsolicited result code #OTAEV that asks the TE to accept or reject the Management Server request to download a firmware b) allows the TE to accept or reject the request Parameters: **<response>** - numeric parameter used to accept or reject the download request 0 – the request is rejected 1 – the request is accepted 2 – the request is delayed indefinitely: the URC is prompted indefinitely until the request is accepted or reject **<mode>** - numeric parameter that controls the processing of unsolicited result code #OTAEV 0 –buffer unsolicited result codes in the MT; if MT result code buffers is full, the oldest ones can be discarded. No codes are forwarded to the TE. 1 –discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE 2 –buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE **<bfr>** - numeric parameter that controls the effect on buffered codes when **<mode>** 1 or 2 is entered 0 – MT buffer of unsolicited result codes #OTAEV is cleared when **<mode>** 1 or 2 is entered 1 – MT buffer of unsolicited result codes #OTAEV is flushed to TE when **<mode>** 1 or 2 is entered Note: the following unsolicited result codes and the corresponding events are defined: #OTAEV: Do you want to upgrade the firmware? A management server request to start the firmware upgrade. The user answer is expected #OTAEV: User Answer Timeout Expected User Answer not received within server defined time interval #OTAEV: Automatic Fw Upgrade Requested An automatic Fw Upgrade procedure has started #OTAEV: Start Fw Download The firmware download is started

#OTASUAN – OTA Set User Answer	SELINT 0/1
	#OTAEV: Fw Download Complete The firmware download is finished #OTAEV: OTA Fw Upgrade Failed The Fw upgrade has failed #OTAEV: Module Upgraded To New Fw The Fw upgrade is successfully finished #OTAEV: Server notified about successfull FW Upgrade The final SMS has been sent to the server notifying the successful FW upgrade "#OTAEV: Registered" The module has registered itself to a server "#OTAEV: Not registered" The registration procedure has failed "#OTAEV: Company Name Registered" The company name is registered "#OTAEV: Company Name not registered" The company name is not registered "#OTAEV: Provisioned" A server has provisioned the module "#OTAEV: Notified" A server has notified the module
AT# OTASUAN?	Read command reports the current settings in the format: **#OTASUAN: ,<mode>,<bfr>**
AT#OTASUAN	Execution command has the same effect as the Read command
AT#OTASUAN =?	Test command returns values supported as a compound value
Example	AT#OTASUAN=,2,1 OK AT#OTASUAN? #OTASUAN: ,2,1 OK AT#OTASUAN =? #OTASUAN: (0-2),(0-2),(0,1) OK

#OTASUAN – OTA Set User Answer	SELINT 2
AT#OTASUAN=<response>[,<mode>[	Set command: a) enables or disables sending of unsolicited result code #OTAEV that asks

#OTASUAN – OTA Set User Answer	SELINT 2
,<bfr>]]	the TE to accept or reject the Management Server request to download a firmware b) allows the TE to accept or reject the request Parameters: **<response>** - numeric parameter used to accept or reject the download request 0 – the request is rejected 1 – the request is accepted 2 – the request is delayed indefinitely: the URC is prompted indefinitely until the request is accepted or reject **<mode>** - numeric parameter that controls the processing of unsolicited result code #OTAEV 0 –buffer unsolicited result codes in the MT; if MT result code buffers is full, the oldest ones can be discarded. No codes are forwarded to the TE. 1 –discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE 2 –buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE **<bfr>** - numeric parameter that controls the effect on buffered codes when **<mode>** 1 or 2 is entered 0 – MT buffer of unsolicited result codes #OTAEV is cleared when **<mode>** 1 or 2 is entered 1 – MT buffer of unsolicited result codes #OTAEV is flushed to TE when **<mode>** 1 or 2 is entered Note: the following unsolicited result codes and the corresponding events are defined: #OTAEV: Do you want to upgrade the firmware? A management server request to start the firmware upgrade. The user answer is expected #OTAEV: User Answer Timeout Expected User Answer not received within server defined time interval #OTAEV: Automatic Fw Upgrade Requested An automatic Fw Upgrade procedure has started #OTAEV: Start Fw Download The firmware download is started #OTAEV: Fw Download Complete The firmware download is finished #OTAEV: OTA Fw Upgrade Failed

#OTASUAN – OTA Set User Answer	SELINT 2
	The Fw upgrade has failed #OTAEV: Module Upgraded To New Fw The Fw upgrade is successfully finished #OTAEV: Server notified about successful FW Upgrade The final SMS has been sent to the server notifying the successful FW upgrade "#OTAEV: Registered" The module has registered itself to a server "#OTAEV: Not registered" The registration procedure has failed "#OTAEV: Company Name Registered" The company name is registered "#OTAEV: Company Name not registered" The company name is not registered "#OTAEV: Provisioned" A server has provisioned the module "#OTAEV: Notified" A server has notified the module
AT# OTASUAN?	Read command reports the current settings in the format: **#OTASUAN: ,<mode>,<bfr>**
AT#OTASUAN =?	Test command returns values supported as a compound value
Example	AT#OTASUAN=,2,1 OK AT#OTASUAN? #OTASUAN: ,2,1 OK AT#OTASUAN =? #OTASUAN: (0-2),(0-2),(0,1) OK

3.5.7.6.3. Saves IP port and IP address for OTA over IP - #OTAIPCFG

#OTAIPCFG – Saves IP port and IP address for OTA over IP	SELINT 0/1
AT#OTAIPCFG=<IPort>,<IP addr>[,<unused>]	This command saves in NVM the IP port number and IP address of the OTA server. Parameters: **<IPort >:** IP port of the OTA server

	<IPaddr>: IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx" Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance. Note2: a special form of the Set command, #OTAIPCFG=<IPort>,"" sets the IP address to "0.0.0.0".
AT#OTAIPCFG?	Read command reports the currently selected **<IPort >** and **<IPaddr>** in the format: **#OTAIPCFG: <IPort >,<IPaddr>,0**
AT#OTAIPCFG	Execution command has the same effect as the Read command
AT#OTAIPCFG =?	Test command reports the range of supported values for parameters **<IPort>** and **<unused>**

#OTAIPCFG – Saves IP port and IP address for OTA over IP	**SELINT 2**
AT#OTAIPCFG=<IPort>,<IP addr>[,<unused>]	This command saves in NVM the IP port number and IP address of the OTA server. Parameters: **<IPort >:** IP port of the OTA server **<IPaddr>:** IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx" Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance. Note2: a special form of the Set command, #OTAIPCFG=<IPort>,"" sets the IP address to "0.0.0.0".
AT#OTAIPCFG?	Read command reports the currently selected **<IPort >** and **<IPaddr>** in the format: **#OTAIPCFG: <IPort >,<IPaddr>,0**
AT#OTAIPCFG=?	Test command reports the range of supported values for parameters **<IPort>** and **<unused>**

3.5.7.6.4. Starts an OTA Update over IP - #OTAIPUPD

#OTAIPUPD – Starts an OTA Update over IP	**SELINT 0/1/2**
AT#OTAIPUPD	This command starts an OTA Update over IP. Note: in order to complete the update, the device has to be registered in

	the OTA server. Note: it is necessary to set some parameters beforehand: the bearer (CSD or GPRS) and the APN, through the command AT#OTASNAPIPCFG, the IP port and IP address, through the command AT#OTAIPCFG. After the command AT#OTAIPUPD has been set, some unsolicited messages will inform the user about the status of the update process: - **#OTAEV: Start Fw Download** - **#OTAEV: Fw Download Complete** - **#OTAEV: Module Upgraded To New FW** - **#OTAEV: Server notified about successfull FW Upgrade** **Or, in case of failure:** - **#OTAEV: OTA FW Upgrade Failed**
AT#OTAIPUPD?	Read command reports the current status of the OTA over IP: the value 1 is returned if the OTA over IP is running (in this case the user shall receive the unsolicited messages), 0 otherwise. **#OTAIPUPD: <status>**
AT#OTAIPUPD =?	Test command tests for command existence

3.5.7.6.5. OTA Set IP port and address for OTA over IP - #OTASNAPIP

#OTASNAPIP – OTA Set IP port and address for OTA over IP	**SELINT 0/1**
AT#OTASNAPIP=<IPort>,<IPaddr>[,<mynumber>[,<company_name>[,<unused>]]]	Set command specifies the IP port number and IP address that the module has to use to send the Remote Registration message. If the current IMSI hasn't been yet registered, the Remote Registration message is automatically sent. Parameters: **<IPort>** - IP port of the OTA server **<IPaddr>** - IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx" **<mynumber>** - string parameter which specifies the phone number of the client **<company_name>** - string parameter containing a client identifier Note1: the command returns ERROR if the APN has not been set through the command AT#OTASNAPIPCFG Note2: a special form of the Set command, **#OTASNAP=<IPort>,""**, sets the IP address to "0.0.0.0".

#OTASNAPIP – OTA Set IP port and address for OTA over IP	SELINT 0/1
	Note3: the values of **<IPort>** and **<IPaddr>** parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration …) Note4: a change of the value of **<company_name>** parameter causes a new FOTA Registration procedure Note5: if the **<company_name>** is an empty string, an ERROR is returned Note6: all the settings are saved in NVM but < **mynumber**>
AT#OTASNAPIP?	Read command reports the current settings in the format: **#OTASNAPIP: <IPort>,<IPaddr>[,<company_name>],0**
AT#OTASNAPIP	Execution command has the same effect as the Read command
AT#OTASNAPIP =?	Test command returns the range for **<IPort>** values and the maximum length of **<mynumber>** field and of **<company_name>** field. The format is: **#OTASNAPIP: (0-65535),,<nlength>,<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<mynumber>** **<tlength>** - integer type value indicating the maximum length of field **<company_name>**

#OTASNAPIP – OTA Set IP port and address for OTA over IP	SELINT 2
AT#OTASNAPIP= <IPort>,<IPaddr>[,<mynumber>[,<company_name>[,<unused>]]]	Set command specifies the IP port number and IP address that the module has to use to send the Remote Registration massage. If the current IMSI hasn't been yet registered, the Remote Registration message is automatically sent. Parameters: **<IPort>** - IP port of the OTA server **<IPaddr>** - IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx" **<mynumber>** - string parameter which specifies the phone number of the client **<company_name>** - string parameter containing a client identifier Note1: the command returns ERROR if the APN has not been set through the command AT#OTASNAPIPCFG Note2: a special form of the Set command, **#OTASNAP=<IPort>,""**, sets the IP address to "0.0.0.0". Note3: the values of **<IPort>** and **<IPaddr>** parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration …)

#OTASNAPIP – OTA Set IP port and address for OTA over IP	SELINT 2
	Note4: a change of the value of **<company_name>** parameter causes a new FOTA Registration procedure Note5: if the **<company_name>** is an empty string, an ERROR is returned Note6: all the settings are saved in NVM but < **mynumber**>
AT#OTASNAPIP?	Read command reports the current settings in the format: **#OTASNAPIP: <IPort>,<IPaddr>[,<company_name>],0**
AT#OTASNAPIP =?	Test command returns the range for **<IPort>** values and the maximum length of **<mynumber>** field and of **<company_name>** field. The format is: **#OTASNAPIP: (1-65535),,<nlength>,<tlength>** where: **<nlength>** - integer type value indicating the maximum length of field **<mynumber>** **<tlength>** - integer type value indicating the maximum length of field **<company_name>**

3.5.7.6.6. OTA Set Access Point Name for OTA over IP - #OTASNAPIPCFG

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 0/1
AT#OTASNAPIPCFG=<bearer>,<APN>[,<username>,<password>[,<rspTimeout>]]	Set command specifies the bearer (GSM or GPRS) and the APN that the module has to use to send the Remote Registration message. The APN is the Access Point Name in case of GPRS bearer or the internet service provider number in case of GSM bearer. Parameters: **<bearer>** **0** – Undefined (default value) 1 – GSM 2 - GPRS **<APN>** - string parameter; in case of GPRS bearer: Access Point Name, a logical name that is used to select the GGSN or the external packet data network; in case of GSM bearer: phone number of the internet service provider **<username>** - string parameter, used only if the context requires it **<password>** - string parameter, used only if the context requires it **<rspTimeout>** - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the TCP connection is closed.

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 0/1
	0 - no timeout 1..65535 - timeout value in seconds (default 300 s.) Note1: if the **<bearer>** is set to 0, then the APN is erased. If the bearer is already 0, any **<APN>** or **<username>** or **<password>** will not be set Note2: the values of **<bearer>, <APN>, <username>** and **<password>** parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration …) Note3: all the settings are saved in NVM
AT#OTASNAPIPCFG?	Read command reports the current settings in the format: **#OTASNAPIPCFG: <bearer>,<APN>[,<username>[,<password>[,<rspTimeout>]]]**
AT#OTASNAPIPCFG	Execution command has the same effect as the Read command
AT#OTASNAPIPCFG =?	Test command returns the range for **<bearer>** values, the maximum length of **<APN>, <username>** and **<password>** string parameters and the range for **<rspTimeout>** values. The format is: **#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)**

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 2
AT#OTASNAPIPCFG= <bearer>,<APN>[,<username>,<password>[,<rspTimeout>]]	Set command specifies the bearer (GSM or GPRS) and the APN that the module has to use to send the Remote Registration message. The APN is the Access Point Name in case of GPRS bearer or the internet service provider number in case of GSM bearer. Parameters: **<bearer>** **0** – Undefined (default value) 1 – GSM 2 - GPRS **<APN>** - string parameter; in case of GPRS bearer: Access Point Name, a logical name that is used to select the GGSN or the external packet data network; in case of GSM bearer: phone number of the internet service provider **<username>** - string parameter, used only if the context requires it **<password>** - string parameter, used only if the context requires it **<rspTimeout>** - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 2
	TCP connection is closed. 0 - no timeout 1..65535 - timeout value in seconds (default 300 s.) Note1: if the **<bearer>** is set to 0, then the APN is erased. If the bearer is already 0, any **<APN>** or **<username>** or **<password>** will not be set Note2: the values of **<bearer>, <APN>, <username>** and **<password>** parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration …) Note3: all the settings are saved in NVM
AT#OTASNAPIPCFG?	Read command reports the current settings in the format: **#OTASNAPIPCFG: <bearer>,<APN>[,<username>[,<password>[,<rspTimeout>]]]**
AT#OTASNAPIPCFG =?	Test command returns the range for **<bearer>** values, the maximum length of **<APN>, <username>** and **<password>** string parameters and the range for **<rspTimeout>** values. The format is: **#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)**

3.5.7.6.7. OTA Registration status - #OTAREG

#OTAREG – OTA Registration status	SELINT 0/1/2
AT#OTAREG	Execution command reports the OTA registration status in the following form: **#OTAREG: <OTA_reg_status>,<OTA_registered_IMSI>** Where: **<OTA_reg_status>** - numeric parameter: - 0: module is not registered to the OTA server - 1: module is registered to the OTA server **<OTA_registered_IMSI>** - string parameter which contains the last IMSI that has been registered to OTA server. If there isn't any registered IMSI, then the value is FFFFFFFFFFFFFF Note: if any SIM isn't inserted in the module, then **<OTA_reg_status>** has value 0
AT#OTAREG =?	Test command returns **OK** result code.
Example	//module has never been registered before to OTA server at#otareg #OTAREG: 0,FFFFFFFFFFFFFF

#OTAREG – OTA Registration status	SELINT 0/1/2

	OK
	
	//the current IMSI is 222887445252672
	at+cimi
	222887445252672
	
	OK
	
	//register the module to the OTA server
	at#otasnap=+39348XXXXXXX
	
	OK
	
	#OTAEV: Registered
	
	//module is registered to the OTA server with the IMSI 222887445252672
	at#otareg
	#OTAREG: 1,222887445252672
	
	OK
	
	//extract the SIM: the module is considered not registered because there isn't any inserted SIM; it's showed the last registered IMSI
	at#otareg
	#OTAREG: 0,222887445252672
	
	OK
	
	//insert a different SIM with IMSI 222015602268637
	at+cimi
	222015602268637
	
	OK
	
	//the module is not yet registered with the current IMSI so it's showed the last registered IMSI
	at#otareg
	#OTAREG: 0,222887445252672
	
	OK
	
	//the module is performing automatically the OTA registration
	
	#OTAEV: Registered
	
	//module is registered to the OTA server with the IMSI 222015602268637
	at#otareg

#OTAREG – OTA Registration status	SELINT 0/1/2
	#OTAREG: 1,222015602268637 OK

3.5.7.7. Multisocket AT Commands

3.5.7.7.1. Socket Status - #SS

#SS - Socket Status SELINT 2	SELINT 2
AT#SS[=<connId>]	Execution command reports the current status of the socket: **Parameters:** **<connId> - socket connection identifier** **1..6** **The response format is:** **#SS: <connId>,<state>,<locIP>,<locPort>,<remIP>,<remPort>** where: **<connId>**- socket connection identifier, as before **<state>** - actual state of the socket: 0 - Socket Closed. 1 - Socket with an active data transfer connection. 2 - Socket suspended. 3 - Socket suspended with pending data. 4 - Socket listening. 5 - Socket with an incoming connection. Waiting for the user accept or shutdown command. 6 - Socket resolving DNS 7 - Socket connecting **<locIP>** - IP address associated by the context activation to the socket. **<locPort>** - two meanings: - the listening port if we put the socket in listen mode. - the local port for the connection if we use the socket to connect to a remote machine. **<remIP>** - when we are connected to a remote machine this is the remote IP address. **<remPort>** - it is the port we are connected to on the remote machine. Note: issuing **#SS<CR>** causes getting information about status of all the sockets; the response format is: **#SS: <connId1>,<state1>,<locIP1>,<locPort1>,<remIP1>,<remPort1>** **<CR><LF>** …# **SS: <connId6>,<state6>,<locIP6>,<locPort6>,<remIP6>,<remPort6>**
AT#SS=?	**Test command reports the range for parameter <connId>**
Example	AT#SS #SS: 1,3,91.80.90.162,61119,88.37.127.146,10510 #SS: 2,4,91.80.90.162,1000 #SS: 3,0 #SS: 4,0

	#SS: 5,3,91.80.73.70,61120,88.37.127.146,10509 #SS: 6,0 OK Socket 1: opened from local IP 91.80.90.162/local port 61119 to remote IP 88.37.127.146/remote port 10510 is suspended with pending data Socket 2: listening on local IP 91.80.90.162/local port 1000 Socket 5: opened from local IP 91.80.73.70/local port 61120 to remote IP 88.37.127.146/remote port 10509 is suspended with pending data AT#SS=2 #SS: 2,4,91.80.90.162,1000 OK We have information only about socket number 2

3.5.7.7.2. Socket Info - #SI

#SI - Socket Info	**SELINT 2**
AT#SI[=<connId>]	Execution command is used to get information about socket data traffic. Parameters: **<connId>** - socket connection identifier 1..6 The response format is: **#SI: <connId>,<sent>,<received>,<buff_in>,<ack_waiting>** where: **<connId>** - socket connection identifier, as before **<sent>** - total amount (in bytes) of sent data since the last time the socket connection identified by **<connId>** has been opened **<received>** - total amount (in bytes) of received data since the last time the socket connection identified by **<connId>** has been opened **<buff_in>** - total amount (in bytes) of data just arrived through the socket connection identified by **<connId>** and currently buffered, not yet read **<ack_waiting>** - total amount (in bytes) of sent and not yet acknowledged data since the last time the socket connection identified by **<connId>** has been opened Note: parameters associated with a socket identified by <connId> are cleared when the socket itself is connected again(#SD or #SA after #SL). Until then, if previous connection has been established and closed, old values are yet available.

#SI - Socket Info	SELINT 2
	Note: not yet acknowledged data are available only for TCP connections; the value **<ack_waiting>** is always 0 for UDP connections. Note: issuing **#SI<CR>** causes getting information about data traffic of all the sockets; the response format is: **#SI: <connId1>,<sent1>,<received1>,<buff_in1>,<ack_waiting1>** **<CR><LF>** **…** **#SI: <connId6>,<sent6>,<received6>,<buff_in6>,<ack_waiting6>**
AT#SI=?	Test command reports the range for parameter **<connId>**.
Example	AT#SI #SI: 1,123,400,10,50 #SI: 2,0,100,0,0 #SI: 3,589,100,10,100 #SI: 4,0,0,0,0 #SI: 5,0,0,0,0 #SI: 6,0,98,60,0 OK *Sockets 1,2,3,6 are opened with some data traffic.* *For example socket 1 has 123 bytes sent, 400 bytes received, 10 byte waiting to be read and 50 bytes waiting to be acknowledged from the remote side.* AT#SI=1 #SI: 1,123,400,10,50 OK *We have information only about socket number 1*

3.5.7.7.3. Context Activation - #SGACT

#SGACT - Context Activation	SELINT 2
AT#SGACT=<cid>, <stat>[,<userId>, <pwd>]	Execution command is used to activate or deactivate either the GSM context or the specified PDP context. Parameters: **<cid>** - PDP context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition **<stat>** 0 - deactivate the context

#SGACT - Context Activation	SELINT 2
	1 - activate the context **<userId>** - string type, used only if the context requires it **<pwd>** - string type, used only if the context requires it Note: context activation/deactivation returns **ERROR** if there is not any socket associated to it (see **AT#SCFG**). Note: after the GSM context has been activated, you can use either Multisocket, or FTP or Email AT commands to send/receive TCP/IP packets via GSM. Note: to deactivate the GSM context, **AT#SGACT=0,0** has to be issued on the same serial port used when the context was activated. Note: GSM context activation is affected by **AT+CBST** command. In particular, GSM context activation is just allowed with "non transparent" data calls. Note: activating a GSM context while a PDP context is already activated causes the PDP context to be suspended. Note: if GSM context is active, it is not allowed any PDP context activation. Note: if username and/or password parameters are empty No Authetication method is used by the module during the PDP CONTEXT ACTIVATION procedure (see also AT#SGACTAUTH). Note: PDP context deactivation request cannot be executed if a call is active/ringing and the module is registered in 2G (GPRS class B). The AT#SGACT=x,0 will return OK even if the request cannot be completed. Verify the current status with AT#SGACT? Note: the response to the AT#SGACT command reports the IP address obtained from the network. In case of IPV4 PDP context, the response is in the format: #SGACT: xxx.xxx.xxx.xxx In case of IPV6 PDP context, the response is in the format: +IP: xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx
AT#SGACT?	Returns the state of all the contexts that have been defined through the commands **+CGDCONT** or **#GSMCONT** **#SGACT: <cid1>,<Stat1><CR><LF>** **…** **#SGACT: <cid5>,<Stat5>** where: **<cid*n*>** - as **<cid>** before **<stat*n*>** - context status

#SGACT - Context Activation	SELINT 2
	0 - context deactivated 1 - context activated
AT#SGACT=?	Test command reports the range for the parameters **<cid>** and **<stat>**
Note	It is strongly recommended to use the same command (e.g. **#SGACT**) to activate the context, deactivate it and interrogate about its status.

3.5.7.7.4. Socket Shutdown - #SH

#SH - Socket Shutdown	SELINT 2
AT#SH=<connId>	This command is used to close a socket. Parameter: **<connId>** - socket connection identifier 1..6
AT#SH=?	Test command reports the range for parameter **<connId>**.

3.5.7.7.5. Socket Configuration - #SCFG

#SCFG - Socket Configuration	SELINT 2
AT#SCFG= <connId>,<cid>, <pktSz>,<maxTo>, <connTo>,<txTo>	Set command sets the socket configuration parameters. Parameters: **<connId>** - socket connection identifier 1..6 **<cid>** - PDP context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition **<pktSz>** - packet size to be used by the TCP/UDP/IP stack for data sending. 0 - select automatically default value(300). 1..1500 - packet size in bytes. **<maxTo>** - exchange timeout (or socket inactivity timeout); if there's no data exchange within this timeout period the connection is closed. 0 - no timeout 1..65535 - timeout value in seconds (default 90 s.) **<connTo>** - connection timeout; if we can't establish a connection to the remote within this timeout period, an error is raised. 10..1200 - timeout value in hundreds of milliseconds (default 600) **<txTo>** - data sending timeout; after this period data are sent also if they're less than max packet size. 0 - no timeout 1..255 - timeout value in hundreds of milliseconds (default 50) 256 – set timeout value in 10 milliseconds 257 – set timeout value in 20 milliseconds 258 – set timeout value in 30 milliseconds

#SCFG - Socket Configuration	SELINT 2
	259 – set timeout value in 40 milliseconds 260 – set timeout value in 50 milliseconds 261 – set timeout value in 60 milliseconds 262 – set timeout value in 70 milliseconds 263 – set timeout value in 80 milliseconds 264 – set timeout value in 90 milliseconds Note: these values are automatically saved in NVM. Note: if DNS resolution is required, max DNS resolution time(20 sec) has to be considered in addition to **<connTo>**
AT#SCFG?	Read command returns the current socket configuration parameters values for all the six sockets, in the format: **#SCFG: <connId1>,<cid1>,<pktsz1>,<maxTo1>,<connTo1>,<txTo1>** **<CR><LF>** **. . .** **#SCFG: <connId6>,<cid6>,<pktsz6>,<maxTo6>,<connTo6>,<txTo6>** **<CR><LF>**
AT#SCFG=?	Test command returns the range of supported values for all the subparameters.
Example	at#scfg? #SCFG: 1,1,300,90,600,50 #SCFG: 2,2,300,90,600,50 #SCFG: 3,2,250,90,600,50 #SCFG: 4,1,300,90,600,50 #SCFG: 5,1,300,90,600,50 #SCFG: 6,1,300,90,600,50 OK

3.5.7.7.6. Socket Configuration Extended - #SCFGEXT

#SCFGEXT - Socket Configuration Extended	SELINT 2
AT#SCFGEXT= **<conned>,<*srMode*>,** **<*recvDataMode*>,** **<*keepalive*>,** **[,<*ListenAutoRsp*>** **[,<*sendDataMode*>]** **]**	Set command sets the socket configuration extended parameters. Parameters: **<connId>** - socket connection identifier 1..6 **<srMode>** - SRing unsolicited mode 0 - Normal (default): SRING: <connId> where <connId> is the socket connection

	identifier 1 – Data amount: SRING: <connId>,<recData> where <recData> is the amount of data received on the socket connection number <connId> 2 - Data view: SRING: <connId>,<recData>,<data> same as before and <data> is data received displayed following <dataMode> value 3 – Data view with UDP datagram informations: SRING: <sourceIP>,<sourcePort><connId>,<recData>, <dataLeft>,<data> same as before with <sourceIP>,<sourcePort> and <dataLeft> that means the number of bytes left in the UDP datagram Note: <srMode> value 3 is not available in SW 13.00.xxx **<recvDataMode>** - data view mode for received data in command mode(AT#SRECV or <srMode> = 2) 0- text mode (default) 1- hexadecimal mode ***<keepalive>*** **-** Set the TCP Keepalive value in minutes 0 – Deactivated (default) 1 – 240 – Keepalive time in minutes ***<ListenAutoRsp>*** **-** Set the listen auto-response mode, that affects the commands AT#SL and AT#SLUDP 0 - Deactivated (default) 1 – Activated **<sendDataMode>** - data mode for sending data in command mode(AT#SSEND) 0 - data represented as text (default) 1 - data represented as sequence of hexadecimal numbers (from 00 to FF) Each octet of the data is given as two IRA character long hexadecimal number Note: these values are automatically saved in NVM. Note: Keepalive is available only on TCP connections. Note: for the behaviour of AT#SL and AT#SLUDP in case of auto-response mode or in case of no auto-response mode, see the description of the two commands.
AT#SCFGEXT?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format:

	#SCFGEXT:<connId1>, <srMode1>,<dataMode1>,<*keepalive1*>, <*ListenAutoRsp1*>,*0*<CR><LF> **. . .** **#SCFGEXT:<connId6>, <srMode6>,<dataMode6>,<*keepalive6*>, <*ListenAutoRsp6*>,*0*<CR><LF>**
AT#SCFGEXT=?	Test command returns the range of supported values for all the subparameters.
Example	Socket 1 set with data view sring, text data mode, a keepalive time of 30 minutes and listen auto-response set. Socket 3 set with data amount sring, hex recv data mode, no keepalive and listen auto-response not set. Socket 4 set with hex recv and send data mode at#scfgext? #SCFGEXT: 1,2,0,30,1,0 #SCFGEXT: 2,0,0,0,0,0 #SCFGEXT: 3,1,1,0,0,0 #SCFGEXT: 4,0,1,0,0,1 #SCFGEXT: 5,0,0,0,0,0 #SCFGEXT: 6,0,0,0,0,0 OK

3.5.7.7.7. Socket configuration Extended 2 - #SCFGEXT2

#SCFGEXT2 - Socket Configuration Extended 2	**SELINT 2**
AT#SCFGEXT2= **<connId>,<bufferStart>,** **[,<abortConnAttempt>** **[,<sringLen >** **[,<sringTo >** **[,<noCarrierMode>]]]]**	Set command sets the socket configuration extended parameters for features not included in #SCFGEXT command. Parameters: **<connId>** - socket connection identifier 1..6 **<bufferStart>** - Set the sending timeout method based on new data received from the serial port. (<txTo> timeout value is set by #SCFG command) Restart of transmission timer will be done when new data are received from the serial port. 0 - old behaviour for transmission timer (#SCFG command 6th parameter old behaviour, start only first time if new data are received from the serial port) 1 - new behaviour for transmission timer:

	restart when new data received from serial port Note: is necessary to avoid overlapping of the two methods. Enabling new method, the old method for transmission timer(#SCFG) is automatically disabled to avoid overlapping. Note: check if new data have been received from serial port is done with a granularity that is directly related to #SCFG <txTo> setting with a maximum period of 1 sec. **<abortConnAttempt>** - Enable connection attempt(#SD/#SKTD/#SKTOP) abort before CONNECT(online mode) or OK(command mode) 0 – Not possible to interrupt connection attempt 1 – It is possible to interrupt the connection attempt (<connTo> set by #SCFG or DNS resolution running if required) and give back control to AT interface by reception of a character. As soon as the control has been given to the AT interface the ERROR message will be received on the interface itself. **<sringLen>** - this parameter sets the length of data received in one **SRING** URC in sring mode 2 or 3 (see **AT#SCFGEXT**) 0 – factory default, means 64 bytes 1 – means that the length is equal to the maximum TCP payload size accepted in download in case of TCP connections, same as 0 in case of UDP connections 64..1472 **<sringTo>** - this parameter sets the delay among one **SRING** URC and the other, in sring mode 2 or 3 (see **AT#SCFGEXT**) 0 – factory default, means 10 hundreds of milliseconds 1..10: value in hundreds of milliseconds Note: values are automatically saved in NVM. Note2: in case **AT#BASE64** has been set on the same connId, the parameter **<sringLen>** will affect the length of the data read from the socket at each **SRING**, but this length will always be a multiple of 78 or 76 (depending on the type of decoding set with **AT#BASE64**) and user will get less due to decoding. **<noCarrierMode>** - this parameter permits to choose **NO CARRIER** indication format when the socket is closed as follows

	0 – **NO CARRIER** (default) Indication is sent as usual, without additional information 1 – **NO CARRIER:<connId>** Indication of current **<connId>** socket connection identifier is added 2 – **NO CARRIER:<connId>,<cause>** Indication of current **<connId>** socket connection identifier and closure **<cause>** are added For possible **<cause>** values, see also **#SLASTCLOSURE** Note: like **#SLASTCLOSURE**, in case of subsequent consecutive closure causes are received, the original disconnection cause is indicated. Note: in the case of command mode connection and remote closure with subsequent inactivity timeout closure without retrieval of all available data(#SRECV or SRING mode 2), it is indicated cause 1 for both possible FIN and RST from remote.
AT#SCFGEXT2?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format: **#SCFGEXT2:<connId1>,<bufferStart1>** **<abortConnAttempt1>,<sringLen1>,** **<sringTo1>,<noCarrierMode1><CR><LF>** **. . .** **#SCFGEXT2:<connId6>,<bufferStart6>,** **<abortConnAttempt6>,<sringLen6>,** **<sringTo6>,<noCarrierMode6><CR><LF>**
AT#SCFGEXT2=?	Test command returns the range of supported values for all the subparameters.
Example	AT#SCFGEXT2=1,1 OK AT#SCFGEXT2=2,1 OK AT#SCFGEXT2? #SCFGEXT2: 1,1,0,0,0,0 #SCFGEXT2: 2,1,0,0,0,0 #SCFGEXT2: 3,0,0,0,0,0 #SCFGEXT2: 4,0,0,0,0,0

	#SCFGEXT2: 5,0,0,0,0,0 #SCFGEXT2: 6,0,0,0,0,0 OK AT#SCFG? #SCFG: 1,1,300,90,600,50 #SCFG: 2,1,300,90,600,50 #SCFG: 3,1,300,90,600,50 #SCFG: 4,2,300,90,600,50 #SCFG: 5,2,300,90,600,50 #SCFG: 6,2,300,90,600,50 OK AT#SCFG=1,1,300,90,600,30 OK Current configuration: socket with connId 1 and 2 are configured with new transmission timer behaviour. <txTo> corresponding value has been changed(#SCFG) for connId 1, for connId 2 has been left to default value.

3.5.7.7.8. Socket configuration Extended 3 - #SCFGEXT3

#SCFGEXT3 - Socket Configuration Extended 3	**SELINT 2**
AT#SCFGEXT3= <connId> ,<immRsp> [,<closureTypeCmdModeEnabling> [,<unused_B> [,<unused_C> [,<unused_D>]]]]	Set command sets the socket configuration extended parameters for features not included in #SCFGEXT command nor in #SCFGEXT2 command. Parameters: **<connId> -** socket connection identifier **1..6** **<immRsp> - Enables AT#SD command mode immediate response** **0 – factory default, means that AT#SD in command mode (see AT#SD) returns after the socket is connected** **1 – means that AT#SD in command mode returns immediately. Then the state of the connection can be read by the AT command AT#SS** **<closureTypeCmdModeEnabling> -** Setting this parameter, successive #SD or #SL with **<closureType>** parameter 255 setting takes effect in command mode. It has been introduced due to retrocompatibility reason regarding **<closureType>** behaviour in command mode.

#SCFGEXT3 - Socket Configuration Extended 3	SELINT 2
	0 – #SD or #SL **<closureType>** 255 in command mode has no effect 1 – #SD or SL **<closureType>** 255 in command mode takes effect Note: parameter is saved in NVM
AT#SCFGEXT3?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format: **#SCFGEXT3:<connId1>,<immRsp1>,<closureTypeCmdModeEnabling1>, 0,0,0<CR><LF>** **. . .** **#SCFGEXT3:<connId6>,<immRsp1>,<closureTypeCmdModeEnabling6>, 0,0,0<CR><LF>**
AT#SCFGEXT3=?	Test command returns the range of supported values for all the parameters.

3.5.7.7.9. #APPSKTCFG – Configure monosocket parameters

#APPSKTCFG – Configure monosocket parameters	SELINT 2
AT#APPSKTCFG=<connTO>[,<UNUSED_1>[,<UNUSED_2>[,<UNUSED_3>[,<UNUSED_4>]]]]	This command sets the parameters needed to monosocket services (FTP, SMTP, HTTP) Parameters: **<connTO>** - connection timeout; if we can't establish a connection to the remote within this timeout period, an error is raised. 10..1200 - timeout value in hundreds of milliseconds (default 800) Note: values are automatically saved in NVM.
AT#APPSKTCFG?	Read command returns the current settings in the format: **#APPSKTCFG**: **<connTO>,0,0,0,0<CR><LF>**
AT#APPSKTCFG=?	Test command returns the range of supported values for all the parameters.

3.5.7.7.10. Socket Dial - #SD

#SD - Socket Dial	SELINT 2
AT#SD=<connId>, <txProt>,<rPort>, <IPaddr> [,<closureType>	Execution command opens a remote connection via socket. Parameters: **<connId>** - socket connection identifier

#SD - Socket Dial	SELINT 2
[,<lPort> **[,<connMode>]]]**	1..6 **<txProt>** - transmission protocol 0 - TCP 1 - UDP **<rPort>** - remote host port to contact 1..65535 **<IPaddr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx.xxx" - any host name to be solved with a DNS query **<closureType>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an **AT#SH** or immediately in case of an abortive disconnect from remote. **<lPort>** - UDP connections local port 1..65535 **<connMode>** - Connection mode 0 - online mode connection (default) 1 - command mode connection Note: **<closureType>** parameter is valid for TCP connections only and has no effect (if used) for UDP connections. Note: **<lPort>** parameter is valid for UDP connections only and has no effect (if used) for TCP connections. Note: if we set **<connMode>** to **online mode connection** and the command is successful we enter in **online data mode** and we see the intermediate result code **CONNECT**. After the **CONNECT** we can suspend the direct interface to the socket connection (nb the socket stays open) using the escape sequence (**+++**): the module moves back to **command mode** and we receive the final result code **OK** after the suspension. After such a suspension, it's possible to resume it in every moment (unless the socket inactivity timer timeouts, see **#SCFG**) by using the **#SO** command with the corresponding **<connId>**. Note: if we set **<connMode>** to **command mode connection** and the command is successful, the socket is opened and we remain in **command mode** and we see the result code **OK**. Note: if there are input data arrived through a connected socket and not yet read because the module entered **command mode** before reading them (after an escape sequence or after **#SD** has been issued with **<connMode>** set to **command mode connection)**, these data are buffered and we receive the **SRING** URC (**SRING** presentation format depends on the last **#SCFGEXT** setting); it's possible to read these data afterwards issuing **#SRECV**. Under the same hypotheses it's possible to send data while in **command mode** issuing **#SSEND** Note: resume of the socket(#SO) after suspension or closure(#SH)

#SD - Socket Dial	SELINT 2
	has to be done on the same instance on which the socket was opened through #SD. In fact, suspension has been done on the instance itself. Note: **<closureType>** 255 takes effect on a command mode connection(**<connMode>** set to 1 or online mode connection suspended with +++) only if **#SCFGEXT3 <closureTypeCmdModeEnabling>** parameter has been previously enabled. Note: if PDP context has not properly opened through **#SGACT** (for instance: wrongly **+CGACT** command has been used), then +CME ERROR: 556(context not opened) will got
AT#SD=?	Test command reports the range of values for all the parameters.
Example	*Open socket 1 in online mode* AT#SD=1,0,80,"www.google.com",0,0,0 CONNECT … *Open socket 1 in command mode* AT#SD=1,0,80,"www.google.com",0,0,1 OK

3.5.7.7.11. Socket Restore - #SO

#SO - Socket Restore	SELINT 2
AT#SO=<connId>	Execution command resumes the direct interface to a socket connection which has been suspended by the escape sequence. Parameter: **<connId>** - socket connection identifier 1..6
AT#SO=?	Test command reports the range of values for **<connId>** parameter.

3.5.7.7.12. Socket Listen - #SL

#SL - Socket Listen	SELINT 2
AT#SL=<connId>, <listenState>, <listenPort> >[,<closure type>]	This command opens/closes a socket listening for an incoming TCP connection on a specified port. Parameters: **<connId>** - socket connection identifier 1..6 **<listenState>** -

#SL - Socket Listen	SELINT 2
	0 - closes socket listening 1 - starts socket listening **<listenPort>** - local listening port **1**..65535 **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an **AT#SH** or immediately in case of an abortive disconnect from remote. Note: if successful, the command returns a final result code **OK**. If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when a TCP connection request comes on the input port, if the sender is not filtered by internal firewall (see **#FRWL**), an URC is received: **+SRING: <connId>** Afterwards we can use **#SA** to accept the connection or **#SH** to refuse it. If the ListenAutoRsp flag has been set, then, when a TCP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command **#FRWL**), the connection is automatically accepted: the **CONNECT** indication is given and the modem goes into **online data mode**. If the socket is closed by the network the following URC is received: **#SL: ABORTED** Note: when closing the listening socket <listenPort> is a don't care parameter Note: **<closureType>** 255 takes effect on a command mode connection (connection accepted through AT#SA=<connId>,1 or online mode connection suspended with +++) only if **#SCFGEXT3 <closureTypeCmdModeEnabling>** parameter has been previously enabled.
AT#SL?	Read command returns all the actual listening TCP sockets.
AT#SL=?	Test command returns the range of supported values for all the subparameters.
Example	*Next command opens a socket listening for TCP on port 3500 without.* AT#SL=1,1,3500 OK

3.5.7.7.13. Socket Listen UDP - #SLUDP

#SLUDP - Socket Listen UDP	SELINT 2
AT#SLUDP=<connId>, <listenState>, <listenPort>	This command opens/closes a socket listening for an incoming UDP connection on a specified port. Parameters: **<connId>** - socket connection identifier 1..6 **<listenState>** - 0 - closes socket listening 1 - starts socket listening **<listenPort>** - local listening port **1**..65535 Note: if successful, the command returns a final result code **OK**. If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when an UDP connection request comes on the input port, if the sender is not filtered by internal firewall (see **#FRWL**), an URC is received: **+SRING: <connId>** Afterwards we can use **#SA** to accept the connection or **#SH** to refuse it. If the ListenAutoRsp flag has been set, then, when an UDP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command **#FRWL**), the connection is automatically accepted: the **CONNECT** indication is given and the modem goes into **online data mode**. If the socket is closed by the network the following URC is received: **#SLUDP: ABORTED** Note: when closing the listening socket <listenPort> is a don't care parameter
AT#SLUDP?	Read command returns all the actual listening UDP sockets.
AT#SLUDP=?	Test command returns the range of supported values for all the subparameters.
Example	*Next command opens a socket listening for UDP on port 3500.* AT#SLUDP=1,1,3500 OK

3.5.7.7.14. Socket Accept - #SA

#SA - Socket Accept	SELINT 2

#SA - Socket Accept	SELINT 2
AT#SA=<connId> [,<connMode>]	Execution command accepts an incoming socket connection after an URC **SRING: <connId>** Parameter: **<connId>** - socket connection identifier 1..6 **<connMode>** - Connection mode, as for command **#SD**. 0 - online mode connection (default) 1 - command mode connection Note: the **SRING** URC has to be a consequence of a **#SL** issue. **Note: setting the command before to having received a SRING will result in an ERROR indication, giving the information that a connection request has not yet been received**
AT#SA=?	Test command reports the range of values for all the parameters.

3.5.7.7.15. Receive Data In Command Mode - #SRECV

#SRECV - Receive Data In Command Mode	SELINT 2
AT#SRECV= <connId>, <maxByte>,[<UDPInfo>]	Execution command permits the user to read data arrived through a connected socket, but buffered and not yet read because the module entered **command mode** before reading them; the module is notified of these data by a **SRING** URC, whose presentation format depends on the last **#SCFGEXT** setting. Parameters: **<connId>** - socket connection identifier 1..6 **<maxByte>** - max number of bytes to read 1..1500 **<UDPInfo>** 0 – UDP information disabled (default) 1 – UDP information enabled: data are read just until the end of the UDP datagram and the response carries information about the remote IP address and port and about the remaining bytes in the datagram. AT#SRECV=<connId>,<maxBytes>,1 #SRECV: <sourceIP>,<sourcePort><connId>,<recData>, <dataLeft> data Note: issuing **#SRECV** when there's no buffered data raises an error. Note: The **<UDPInfo>** parameter is not available in SW 13.00.xxx.
AT#SRECV=?	Test command returns the range of supported values for parameters < connId >,< maxByte > and <UDPInfo>
Example	**SRING URC (<srMode> be 0, <dataMode> be 0)** *telling data have just come through*

#SRECV - Receive Data In Command Mode	SELINT 2
	connected socket identified by <connId>=1 and are now buffered SRING: 1 *Read in text format the buffered data* AT#SRECV=1,15 #SRECV: 1,15 stringa di test OK *Or:* *if the received datagram, received from <IPaddr and <IPport> is of 60 bytes* AT#SRECV=1,15,1 #SRECV: <IPaddr>,<IPport>,1,15,45 stringa di test OK **SRING URC (<srMode> be 1, <dataMode> be 1**) *telling 15 bytes data have just come through connected socket identified by <connId>=2 and are now buffered* SRING: 2,15 *Read in hexadecimal format the buffered data* AT#SRECV=2,15 #SRECV: 2,15 737472696e67612064692074657374 OK *Or:* *if the received datagram, received from <IPaddr and <IPport> is of 60 bytes* AT#SRECV=2,15 #SRECV: <IPaddr>,<IPport>,2,15,45 737472696e67612064692074657374 OK **SRING URC (<srMode> be 2, <dataMode> be 0)** *displaying (in text format) 15 bytes data that have just come through connected socket identified by <connId>=3; it's no necessary to issue #SRECV to read the data; no data remain in the buffer after this URC* SRING: 3,15, stringa di test

3.5.7.7.16. Send Data In Command Mode - #SSEND

#SSEND - Send Data In Command Mode	SELINT 2
AT#SSEND= <connId>	Execution command permits, while the module is in **command mode,** to send data through a connected socket.

#SSEND - Send Data In Command Mode	SELINT 2
	Parameters: **<connId>** - socket connection identifier 1..6 The device responds to the command with the prompt ‘>’ <greater_than><space> and waits for the data to send. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). If data are successfully sent, then the response is **OK**. If data sending fails for some reason, an error code is reported Note: the maximum number of bytes to send is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2, 1500**(TCP)/1472(UDP)** bytes for versions starting from 10.0x.xx3 ; trying to send more data will cause the surplus to be discarded and lost. Note: it’s possible to use **#SSEND** only if the connection was opened by **#SD**, else the ME is raising an error. Note: a byte corresponding to BS char(0x08) is treated with its corresponding meaning; therefore previous byte will be cancelled(and BS char itself will not be sent)
AT#SSEND=?	Test command returns the range of supported values for parameter **<connId>**
Example	*Send data through socket number 2* AT#SSEND=2 >Test<CTRL-Z> OK

3.5.7.7.17. Socket Info Extended - #SIEXT

#SIEXT – Socket Info Extended	SELINT 2
AT#SIEXT[=<connId>]	Execution command is used to get information about socket data traffic. Parameters: **<connId>** - socket connection identifier 1..6 The response format is: **#SIEXT: <connId>,<retx>,<oos>,<rsrvd1>,<rsrvd2>** where:

	<connId> - socket connection identifier, as before **<retx>** - total amount of retransmissions of outgoing packets since the last time the socket connection identified by **<connId>** has been opened **<oos>** - total amount of ingoing out of sequence packets (packets which sequence number is greater than the next expected one) since the last time the socket connection identified by **<connId>** has been opened **<rsrvd1/2>** - reserved fields for future development of new statistics. Currently they're always equal to 0 Note: parameters associated with a socket identified by <connId> are cleared when the socket itself is connected again (#SD or #SA after #SL). Until then, if previous connection has been established and closed, old values are yet available. Note: both **<retx>** and **<oos>** parameters are available only for TCP connections; their value is always 0 for UDP connections. Note: issuing **#SIEXT<CR>** causes getting information about data traffic of all the sockets; the response format is: **#SI: <connId1>,<retx1>,<oos1>,<rsrvd1_1>,< rsrvd2_1> <CR><LF>** **…** **#SI: <connId6>,<retx6>,<oos6>,< rsrvd1_6>,< rsrvd2_6>**
AT#SIEXT=?	Test command reports the range for parameter **<connId>**.

3.5.7.7.18. Send data in Command Mode extended - #SSENDEXT

#SSENDEXT - Send Data In Command Mode extended	**SELINT 2**
AT#SSENDEXT= <connId>, <bytestosend>	Execution command permits, while the module is in **command mode,** to send data through a connected socket including all possible octets (from 0x00 to 0xFF). Parameters: **<connId>** - socket connection identifier 1..6 **< bytestosend >** - number of bytes to be sent Please refer to test command for range The device responds to the command with the prompt <greater_than><space> and waits for the data to send.

#SSENDEXT - Send Data In Command Mode extended	SELINT 2
	When <bytestosend> bytes have been sent, operation is automatically completed. If data are successfully sent, then the response is **OK**. If data sending fails for some reason, an error code is reported. Note: it's possible to use **#SSENDEXT** only if the connection was opened by **#SD**, else the ME is raising an error. Note: all special characters are sent like a generic byte. (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted)
AT#SSENDEXT=?	Test command returns the range of supported values for parameters **< connId >** and **<bytestosend>**

Example	Open the socket in command mode:
	at#sd=1,0,<port>,"IP address",0,0,1
	OK
	
	Give the command specifying total number of bytes as second parameter:
	
	at#ssendext=1,256
	> ..... ; // Terminal echo of bytes sent is displayed here
	OK
	
	All possible bytes(from 0x00 to 0xFF) are sent on the socket as generic bytes.

3.5.7.7.19. IP Easy Authentication Type - #SGACTAUTH

#SGACTAUTH – Easy IP Authentication Type	SELINT 2
AT#SGACTAUTH= <type>	Set command sets the authentication type for IP Easy This command has effect on the authentication mode used on AT#SGACT or AT#GPRS commands. Parameter **<type>** 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication Note: the parameter is not saved in NVM Note: PAP Authentication is default when AT#SGACT contains username e/o password. No Authentication is default when AT#SGACT doesn't contains username and

#SGACTAUTH – Easy IP Authentication Type		SELINT 2
	password.	
AT#SGACTAUTH?	Read command reports the current IP Easy authentication type, in the format: **#SGACTAUTH: <type>**	
AT#SGACTAUTH =?	Test command returns the range of supported values for parameter **<type>**.	

3.5.7.7.20. Context activation and configuration - #SGACTCFG

#SGACTCFG - Context Activation and Configuration		SELINT 2
AT#SGACTCFG= <cid>, <retry>, [,<delay > [,<urcmode >]]	Execution command is used to enable or disable the automatic activation/reactivation of the context for the specified PDP context, to set the maximum number of attempts and to set the delay between an attempt and the next one. The context is activated automatically after every GPRS Attach or after a NW PDP CONTEXT deactivation if at least one IPEasy socket is configured to this context (see AT#SCFG). Parameters: <cid> - PDP context identifier (see +CGDCONT command) 1..5 - numeric parameter which specifies a particular PDP context definition <retry> - numeric parameter which specifies the maximum number of context activation attempts in case of activation failure. The value belongs to the following range: 0 - 15 0 - disable the automatic activation/reactivation of the context (default) <delay> - numeric parameter which specifies the delay in seconds between an attempt and the next one. The value belongs to the following range: 180 - 3600 < urcmode > - URC presentation mode 0 - disable unsolicited result code (default) 1 - enable unsolicited result code, after an automatic activation/reactivation, of the local IP address obtained from the network. It has meaning only if <auto>=1. The unsolicited message is in the format: #SGACT: <ip_address> reporting the local IP address obtained from the network. Note: the URC presentation mode <urcmode> is related to the current AT instance only. Last <urcmode> setting is saved for every instance as extended profile parameter, thus it is possible to restore it even if the multiplexer control channel is released and set up, back and forth. Note: < retry > and <delay> setting are global parameter saved in NVM	

	Note: if the automatic activation is enabled on a context, then it is not allowed to modify by the command AT#SCFG the association between the context itself and the socket connection identifier; all the other parameters of command AT#SCFG are modifiable while the socket is not connected
AT#SGACTCFG?	Read command reports the state of all the five contexts, in the format: #SGACTCFG: <cid1>,<retry1>,<delay1>, < urcmode >CR><LF> … #SGACTCFG: <cid5>,<retry5>,<delay5>,< urcmode > where: <cid*n*> - as <cid> before <retry*n*> - as <retry> before <delay*n*> - as <delay> before < urcmode > - as < urcmode > before
AT#SGACTCFG =?	Test command reports supported range of values for parameters <cid>>,<retry>,<delay>and < urcmode >

3.5.7.7.21. Context activation and configuration extended - #SGACTCFGEXT

#SGACTCFGEXT - context activation configuration extended	SELINT 2
AT#SGACTCFGEXT= <cid>, <abortAttemptEnable> [,<unused> [,<unused> [,<unused>]]]	Execution command is used to enable new features related to context activation. Parameters: <cid> - PDP context identifier (see +CGDCONT command) 1..5 - numeric parameter which specifies a particular PDP context definition < abortAttemptEnable > 0 – old behaviour: no abort possible while attempting context activation 1 – abort during context activation attempt is possible by sending a byte on the serial port. It takes effect on successive GPRS context activation attempt through #SGACT command in the following manner. While waiting for AT#SGACT=<cid>,1 response(up to 150 s) is possible to abort attempt by sending a byte and get back AT interface control(NO CARRIER indication). Note: If we receive delayed CTXT ACTIVATION ACCEPT after abort, network will be automatically informed of our aborted attempt through relative protocol messages(SM STATUS) and will also close on its side.

	Otherwise, if no ACCEPT is received after abort, network will be informed later of our PDP state through other protocol messages (routing area update for instance).
AT# SGACTCFGEXT?	Read command reports the state of all the five contexts, in the format: #SGACTCFGEXT: <cid1>,< abortAttemptEnable1 >,0,0,0<CR><LF> … #SGACTCFGEXT: <cid5>,< abortAttemptEnable5 >,0,0,0<CR><LF> where: <cid*n*> - as <cid> before < abortAttemptEnable *n*> - as < abortAttemptEnable > before Note: values are automatically saved in NVM.
AT#SGACTCFGEXT=?	Test command reports supported range of values for all parameters

3.5.7.7.22. PAD command features - #PADCMD

#PADCMD – PAD command features	**SELINT 2**
AT#PADCMD=<mode>	This command sets features of the pending data flush to socket, opened with AT#SD command. Parameters: **<mode>:** Bit 1: 1 - enable forwarding; 0 – disable forwarding; Other bits reserved; Note: forwarding depends on character defined by AT#PADFWD
AT#PADCMD?	Read command reports the currently selected **<mode>** in the format: **#PADCMD: mode**
AT#PADCMD=?	Test command reports the supported range of values for parameter **<mode>**.

3.5.7.7.23. PAD forward character - #PADFWD

#PADFWD – PAD forward character	**SELINT 2**
AT#PADFWD=<char> [,<mode>]	This command sets the char that immediately flushes pending data to socket, opened with AT#SD command. Parameters: **<char>:** a number, from 0 to 255, that specifies the asci code of the char used to

	flush data **<mode>:** flush mode, 0 – normal mode (default); 1 – reserved; Note: use AT#PADCMD to enable the socket char-flush activity.
AT#PADFWD?	Read command reports the currently selected **<char>** and **<mode>** in the format: **#PADFWD: <char>,mode**
AT#PADFWD=?	Test command reports the supported range of values for parameters **<char>** and **<mode>**.

3.5.7.7.24. Base64 encoding/decoding of data sent/received on a socket - #BASE64

#BASE64 – Base64 encoding/decoding of data sent/received on a skt	**SELINT 2**
AT#BASE64= **<connId>,<enc>,<dec>** **[,<unused_B >** **[,<unused_C >]]**	Set command enables base64 encoding and/or decoding of data sent/received to/from the socket in online or in command mode. Parameters: **<connId>** - socket connection identifier 1..6 **<enc>** 0 – no encoding of data received from serial port. 1 - MIME RFC2045 base64 encoding of data received from serial port that have to be sent to <connId> socket. Note: as indicated from RFC2045 the encoded output stream is represented in lines of no more than 76 characters each. Lines are defined as sequences of octets separated by a CRLF sequence. 2 - RFC 3548 base64 encoding of data received from serial port that have to be sent to <connId> socket. Note: as indicated from RFC3548 CRLF have not to be added. **<dec>** 0 – no decoding of data received from socket <connId>. 1 - MIME RFC2045 base64 decoding of data received from socket <connId> and sent to serial port. (Same rule as for <enc> regarding line feeds in the received file that has to be decoded) 2 - RFC3548 base64 decoding of data received from socket <connId> and sent to serial port. (Same rule as for <enc> regarding line feeds in the received file that has to be decoded)

	Note: it is possible to use command to change current <enc>/<dec> settings for a socket already opened in command mode or in online mode after suspending it. (In this last case obviously it is necessary to set AT#SKIPESC=1). Note: to use #BASE64 in command mode, if data to send exceed maximum value for #SSENDEXT command, they have to be divided in multiple parts. These parts have to be a multiple of 57 bytes, except for the last one, to distinguish EOF condition. (Base64 encoding rules) For the same reason if #SRECV command is used by the application to receive data, a multiple of 78 bytes has to be considered. Note: to use #SRECV to receive data with <dec> enabled, it is necessary to consider that: reading <maxByte> bytes from socket, user will get less due to decoding that is performed. Note: on version 10.0x.xx3 only <connId> 1 is available. Note: values are automatically saved in NVM.
AT# BASE64?	Read command returns the current <enc>/<dec> settings for all the six sockets, in the format: **# BASE64:<connId1><enc1>,<dec1>,0,0<CR><LF>** **. . .** **# BASE64:<connId6>,<enc6>,<dec6>,0,0<CR><LF>**
AT# BASE64=?	Test command returns the range of supported values for all the subparameters.
Example	AT#SKIPESC=1 OK AT#SD=<connId>,<txProt>,<rPort>,<IPaddr> CONNECT //Data sent without modifications(default) …… +++ (suspension) OK at#base64=<connId>,1,0 OK

	AT#SO=<connId>
	CONNECT
	// Data received from serial port are encoded
	// base64 before to be sent on the socket
	……
	+++ (suspension)
	OK
	
	at#base64=<connId>,0,1
	OK
	
	AT#SO=<connId>
	CONNECT
	// Data received from socket are decoded
	// base64 before to be sent on the serial port
	+++ (suspension)
	……

3.5.7.7.25. Send UDP data to a specific remote host - #SSENDUDP

#SSENDUDP – send UDP data to a specific remote host	**SELINT 2**
AT#SSENDUDP=<connId>,<remoteIP>,<remotePort>	This command permits, while the module is in command mode, to send data over UDP to a specific remote host. UDP connection has to be previously completed with a first remote host through **#SLUDP** / **#SA**. Then, if we receive data from this or another host, we are able to send data to it. Like command **#SSEND**, the device responds with '> ' and waits for the data to send. Parameters: **<connId>** - socket connection identifier 1..6 **<remoteIP>** - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx.xxx" **<remotePort>** - remote host port 1..65535 Note: after SRING that indicates incoming UDP data and issuing **#SRECV** to receive data itself, through **#SS** is possible to check last remote host (IP/Port).

	Note: if successive resume of the socket to online mode Is performed(**#SO**), connection with first remote host is restored as it was before. Note: the maximum number of bytes to send is 1472 bytes
AT#SSENDUDP=?	Test command reports the supported range of values for parameters **<connId>**,**<remoteIP>** and **<remotePort>**
Example	*Starts listening on <LocPort>(previous setting of firewall through #FRWL has to be done)* AT#SLUDP=1,1,<LocPort> OK SRING: 1 // *UDP data from a remote host available* AT#SA=1,1 OK SRING: 1 AT#SI=1 #SI: 1,0,0,23,0 *// 23 bytes to read* OK AT#SRECV=1,23 #SRECV:1,23 message from first host OK AT#SS=1 #SS: 1,2,<LocIP>,<LocPort>,<RemIP1>,<RemPort1> OK AT#SSENDUDP=1,<RemIP1>,<RemPort1> >response to first host OK SRING: 1 // *UDP data from a remote host available* AT#SI=1 #SI: 1,22,23,24,0 *// 24 bytes to read* OK

	AT#SRECV=1,24 #SRECV:1,24 message from second host OK AT#SS=1 #SS: 1,2,<LocIP>,<LocPort>,<RemIP2>,<RemPort2> OK *Remote host has changed, we want to send a reponse:* **AT#SSENDUDP=1,<RemIP2>,<RemPort2>** **>response to second host** **OK**

3.5.7.7.26. Send UDP data to a specific remote host extended - #SSENDUDPEXT

#SSENDUDPEXT – send UDP data to a specific remote host extended	**SELINT 2**
AT#SSENDUDPEXT =<connId>,<bytestosend>, ,<remoteIP>,<remotePort>	This command permits, while the module is in command mode, to send data over UDP to a specific remote host including all possible octets(from 0x00 to 0xFF) As indicated about **#SSENDUDP**: UDP socket has to be previously opened through **#SLUDP** / **#SA**, then we are able to send data to different remote hosts Like **#SSENDEXT**, the device responds with the prompt '> ' and waits for the data to send, operation is automatically completed when **<bytestosend>** have been sent. Parameters: **<connId>** - socket connection identifier 1..6 **<bytestosend>** - number of bytes to be sent 1-1472 **<remoteIP>** - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx.xxx" **<remotePort>** - remote host port 1..65535
AT#SSENDUDPEXT=?	Test command reports the supported range of values for parameters **<connId>**,**<bytestosend>**,**<remoteIP>** and **<remotePort>**

3.5.7.7.27. Socket Type - #ST

#ST – Socket Type	SELINT 2
AT#ST [=<ConnId>]	Set command reports the current type of the socket (TCP/UDP) and its direction (Dialer / Listener) Parameter: **< ConnId >** - socket connection identifier 1..6 The response format is: **#ST: <connId>,<type>,<direction>** where **< connId >** - socket connection identifier 1..6 **< type >** - socket type 0 – No socket 1 – TCP socket 2 – UDP socket **< direction >** - direction of the socket 0 – No 1 – Dialer 2 – Listener Note: issuing **#ST<CR>** causes getting information about type of all the sockets; the response format is: **#ST: <connId1>,<type1>,<direction1>** **<CR><LF>** … **#ST: <connId6>,< type 6>,< direction 6>**
AT#ST=?	Test command reports the range for parameter <connId>.
Example	single socket: AT#ST=3 #ST: 3,2,1 Socket 3 is an UDP dialer. All sockets: AT#ST #ST: 1,0,0 #ST: 2,0,0

#ST – Socket Type	SELINT 2
	#ST: 3,2,1 #ST: 4,2,2 #ST: 5,1,1 #ST: 6,1,2 Socket 1 is closed. Socket 2 is closed. Socket 3 is an UDP dialer Socket 4 is an UDP listener Socket 5 is a TCP dialer Socket 6 is a TCP listener

3.5.7.7.28. Detect the cause of a socket disconnection - #SLASTCLOSURE

#SLASTCLOSURE – Detect the cause of a socket disconnection	SELINT 2
AT#SLASTCLOSURE[=[<connId>]	Execution command reports socket disconnection cause Parameters: **<connId>** - socket connection identifier 1..6 The response format is: **#SLASTCLOSURE: <connId>,<cause>** where: **<connId>** - socket connection identifier, as before **<cause>** - socket disconnection cause: 0 – not available(socket has not yet been closed) 1.- remote host TCP connection close due to FIN/END: normal remote disconnection decided by the remote application 2 -.remote host TCP connection close due to RST, all others cases in which the socket is aborted without indication from peer (for instance because peer doesn't send ack after maximum number of retransmissions/peer is no more alive). All these cases include all the "FATAL" errors after recv or send on the TCP socket(named as different from EWOULDBLOCK) 3.- socket inactivity timeout 4.- network deactivation(PDP context deactivation

	from network) Note: issuing **#SLASTCLOSURE<CR>** causes getting socket disconnection reason for all the sockets Note: any time socket is re-opened, last disconnection cause is reset. Command report 0(not available). Note: user closure cause(**#SH**) is not considered and if a user closure is performed after remote disconnection, remote disconnection cause remains saved and is not overwritten. Note: if more consecutive closure causes are received, the original disconnection cause is saved. (For instance: if a TCP FIN is received from remote and later a TCP RST because we continue to send data, FIN cause is saved and not overwritten) Note: also in case of **<closureType>**(**#SD**) set to 255, if the socket has not yet been closed by user after the escape sequence, **#SLASTCLOSURE** indicates remote disconnection cause if it has been received. Note: in case of UDP, cause 2 indicates abnormal(local) disconnection. Cause 3 and 4 are still possible. (Cause 1 is obviously never possible)
AT#SLASTCLOSURE=?	Test command reports the supported range for parameter **<connId>**

3.5.7.7.29. Open a connection, send data and close connection - #SSENDLINE

#SSENDLINE – Open a connection,send data,close connection	**SELINT 2**
AT#SSENDLINE=<data>	This command permits to open a TCP/UDP connection, send specified data and close the TCP/UDP connection. The remote host/port of the connection have to be previously specified with **#IPCONSUMECFG** command. Parameters: **<data>** - text to send, shall be enclosed between double quotes. Note: maximum allowed amount of data is 380 octets Note: in case of UDP obviously only local opening/closure is done, datagram is sent with **<data>** contained in the payload.

AT#SSENDLINE=?	Test command reports the supported range of values for parameters

Example	at+cgdcont=1,"IP",”APN"
	OK
	
	at#ipconsumecfg=1,0,"remoteHost",remotePort
	OK
	// Socket with <connId> 1 will be used by #ssendline;
	// TCP will be the transmission protocol;
	// connection will be opened with “remoteHost”/remotePort
	
	at#sgact=1,1
	#SGACT: xxx.xxx.xxx.xxx
	
	OK
	
	at#ssendline="test sample"
	// TCP connection with “remoteHost”/remotePort is opened ,
	// data between double quotes are sent,
	// then TCP connection is closed
	OK

3.5.7.7.30. #SGACT and #SSENDLINE configuration - #IPCONSUMECFG

#IPCONSUMECFG – #SGACT/#SSENDLINE configuration	**SELINT 2**
AT#IPCONSUMECFG= **[<connId>** **[,<txProt>** **[,<remoteHost>** **[,<remotePort>** **[,<authIMEI/ICCIDEna>** **[,<unused_A>** **[,<unused_B>** **[,<unused_C>** **]]]]]]]**	This command configures **#SGACT** authentication and **#SSENDLINE** connection parameters. Parameters: Following settings take effect on successive **#SSENDLINE** command: **<connId>: -** socket connection identifier 1(default)..6 Note: verify **<connId>** is currently available(i.e: not already connected) by multisocket commands(**#SD**,**#SL**,…) before entering successive **#SSENDLINE** command **<txProt> -** transmission protocol 0 – TCP(default) 1 – UDP **<remoteHost> -** address of the remote host, string type. This parameter can be either:

	- any valid IP address in the format: “xxx.xxx.xxx.xxx” - any host name to be solved with a DNS query. Default “” **<remotePort> -** remote host port to contact 1..65535 Default 1024 Following setting takes effect on successive **#SGACT** command: **<authIMEI/ICCIDEna> -** enables PDP context activation (#SGACT) authentication(user/pwd) with ICCID/IMEI 0 – disable **#SGACT** authentication with IMEI/ICCID as user/pwd(default) 1 – enable **#SGACT** authentication with with IMEI/ICCID as user/pwd Note: **<authIMEI/ICCIDEna>** setting takes effect when successive **#SGACT** not indicating **<userId>** and **<pwd>** will be used Note: the values set by command are directly stored in NVM and doesn’t depend on the specific CMUX instance.
AT#IPCONSUMECFG?	Read command reports the currently configuration parameters in the format: **#IPCONSUMECFG: <connId>,<txProt>,<remoteHost> ,<remotePort>,<authIMEI/ICCIDEna>,<0>,<0>,<0> <CR><LF>**
AT#IPCONSUMECFG=?	Test command reports the supported range of values for all the parameters

3.5.7.8. FTP AT Commands

3.5.7.8.1. FTP Time-Out - #FTPTO

#FTPTO - FTP Time-Out	SELINT 0 / 1
AT#FTPTO[=<tout>]	Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel. Parameter: **<tout>** - time-out in 100 ms units 100..5000 - hundreds of ms (factory default is 100) Note: The parameter is not saved in NVM. Note: if parameter **<tout>** is omitted the behaviour of Set command is the same as Read command.
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format: **#FTPTO: <tout>**
AT#FTPTO=?	Test command returns the range of supported values for parameter **<tout>**

#FTPTO - FTP Time-Out	SELINT 2
AT#FTPTO=[<tout>]	Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel. Parameter: **<tout>** - time-out in 100 ms units 100..5000 - hundreds of ms (factory default is 100) Note: The parameter is not saved in NVM.
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format: **#FTPTO: <tout>**
AT#FTPTO=?	Test command returns the range of supported values for parameter **<tout>**

3.5.7.8.2. FTP Open - #FTPOPEN

#FTPOPEN - FTP Open	SELINT 0 / 1
AT#FTPOPEN=<server:port>,<username>,<password>[,<mode>]	Execution command opens an FTP connection toward the FTP server. Parameters: **<server:port>** - string type, address and port of FTP server (factory default port 21). **<username>** - string type, authentication user identification string for FTP. **<password>** - string type, authentication password for FTP. **<mode>**

#FTPOPEN - FTP Open	SELINT 0 / 1
	0 - active mode (default) 1 - passive mode Note: Before opening an FTP connection the GPRS context must have been activated by **AT#GPRS=1**

#FTPOPEN - FTP Open	SELINT 2
AT#FTPOPEN=[<server:port>,<username>,<password>[,<mode>]]	Execution command opens an FTP connection toward the FTP server. Parameters: **<server:port>** - string type, address and port of FTP server (factory default port 21). **<username>** - string type, authentication user identification string for FTP. **<password>** - string type, authentication password for FTP. **<mode>** 0 - active mode (factory default) 1 - passive mode Note: Before opening an FTP connection either the GSM context must have been activated by **AT#SGACT=0,1** or the PDP context #1 must have been activated by **AT#SGACT=1,1** or by **AT#GPRS=1**
AT#FTPOPEN=?	Test command returns the **OK** result code.

3.5.7.8.3. FTP Close - #FTPCLOSE

#FTPCLOSE - FTP Close	SELINT 0 / 1
AT#FTPCLOSE	Execution command closes an FTP connection.
AT#FTPCLOSE?	Read command behavior is the same as Execution command.

#FTPCLOSE - FTP Close	SELINT 2
AT#FTPCLOSE	Execution command closes an FTP connection.
AT#FTPCLOSE=?	Test command returns the **OK** result code.

3.5.7.8.4. FTP Put - #FTPPUT

#FTPPUT - FTP Put	SELINT 0 / 1
AT#FTPPUT=<filename>	Execution command, issued during an FTP connection, opens a data connection and starts sending **<filename>** file to the FTP server. If the data connection succeeds, a **CONNECT** indication is sent, afterward a NO CARRIER indication is sent when the socket is closed. Parameter:

#FTPPUT - FTP Put	SELINT 0 / 1
	<filename> - string type, name of the file (maximum length 200 characters) Note: use the escape sequence +++ to close the data connection. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.
AT#FTPPUT=?	Test command returns the OK result code.

#FTPPUT - FTP Put	SELINT 2
AT#FTPPUT=[[<filename>],[<connMode>]]	Execution command, issued during an FTP connection, opens a data connection and starts sending **<filename>** file to the FTP server. If the data connection succeeds, a **CONNECT** indication is sent. afterward a NO CARRIER indication is sent when the socket is closed. Note: if we set **<connMode>** to 1, the data connection is openedand we remain in command mode and we see the result code **OK** (instead of **CONNECT**) Parameters: **<filename>** - string type, name of the file (maximum length 200 characters) **<connMode>** 0 - online mode 1 – command mode Note: use the escape sequence +++ to close the data connection. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: The <connMode> parameter is not available in SW 13.00.xxx.
AT#FTPPUT=?	Test command reports the supported range of values for parameters **<filename>** and **<connMode>**

3.5.7.8.5. FTP Get - #FTPGET

#FTPGET - FTP Get	SELINT 0 / 1
AT#FTPGET=<filename>	Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server. If the data connection succeeds a **CONNECT** indication is sent, otherwise a **NO CARRIER** indication is sent. The file is received on the serial port.

#FTPGET - FTP Get	SELINT 0 / 1
	Parameter: **<filename>** - file name, string type. Note: The command causes an **ERROR** result code to be returned in case no FTP connection has been opened yet. Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.

#FTPGET - FTP Get	SELINT 2
AT#FTPGET=[<filename>]	Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server. If the data connection succeeds a **CONNECT** indication is sent. The file is received on the serial port. Parameter: **<filename>** - file name, string type. Note: The command causes an **ERROR** result code to be returned in case no FTP connection has been opened yet. Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.
AT#FTPGET=?	Test command returns the OK result code.

3.5.7.8.6. FTP GET in command mode - #FTPGETPKT

#FTPGETPKT - FTP Get in command mode	SELINT 2
AT#FTPGETPKT=<filename>[,<viewMode>]	Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server while remaining in **command mode**. The data port is opened and we remain in **command mode** and we see the result code **OK**. Retrieval from FTP server of "remotefile" is started, but data are only buffered in the module. It's possible to read data afterwards issuing #FTPRECV command Parameters: **<filename>** - file name, string type (maximum length: 200 characters). **<viewMode>** - permits to choose view mode; numeric parameter: 0 – text format (default) 1 – hexadecimal format Note: The command causes an **ERROR** result code to be returned in case no FTP connection has been opened yet.

#FTPGETPKT - FTP Get in command mode	SELINT 2
	Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.
AT#FTPGETPKT?	Read command reports current download state for <filename> with <viewMode> chosen, in the format: **#FTPGETPKT: <remotefile>,<viewMode>,<eof>** where **<eof>** is a numeric parameter: 0 = file currently being transferred 1 = complete file has been transferred to FTP client
AT#FTPGETPKT=?	Test command returns the OK result code.

3.5.7.8.7. Receive and store FTP server data - #FTPGETF

#FTPGETF – Receive and store FTP server data	SELINT 2
AT#FTPGETF= <src_filename>, <dest_filename> [,<verbose>]	Execution command, issued during a FTP connection, opens a data connection and starts downloading a file from the FTP server. The file is saved into module's file system. Parameter: **<src_filename>** - Name of the file to be downloaded, string type **<dest_filename>** - Name of the destination file to be written into module's file system, string type (max 16 chars, case sensitive). **<verbose>** - 0: Disable verbose mode (default) - 1: Enable verbose mode
AT#FTPGETF=?	Test command returns the OK result code.
Note	This command returns an **ERROR** result code if no FTP connection has been opened yet. Command closure should always be handled by application. A timeout should be implemented by the application in order to avoid download stall situations When verbose mode is enabled, i.e. **<verbose>** is set to 1, the '**#**' character is printed on the AT command port every time a chunk of data is received and then written.

3.5.7.8.8. FTP Type - #FTPTYPE

#FTPTYPE - FTP Type	SELINT 0 / 1

#FTPTYPE - FTP Type	SELINT 0 / 1
AT#FTPTYPE[=<type>]	Set command, issued during an FTP connection, sets the file transfer type. Parameter: **<type>** - file transfer type: 0 - binary 1 - ascii Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: If the parameter is omitted then the behaviour of Set command is the same of Read command.
#FTPTYPE?	Read command returns the current file transfer type, in the format: **#FTPTYPE: <type>**
#FTPTYPE=?	Test command returns the range of available values for parameter **<type>**: **#FTPTYPE: (0,1)**

#FTPTYPE - FTP Type	SELINT 2
AT#FTPTYPE=[<type>]	Set command, issued during an FTP connection, sets the file transfer type. Parameter: **<type>** - file transfer type: 0 - binary 1 - ascii Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.
#FTPTYPE?	Read command returns the current file transfer type, in the format: **#FTPTYPE: <type>**
#FTPTYPE=?	Test command returns the range of available values for parameter **<type>**: **#FTPTYPE: (0,1)**

3.5.7.8.9. FTP Read Message - #FTPMSG

#FTPMSG - FTP Read Message	SELINT 0 / 1
AT#FTPMSG	Execution command returns the last response from the server.
AT#FTPMSG?	Read command behaviour is the same as Execution command.

#FTPMSG - FTP Read Message	SELINT 2
AT#FTPMSG	Execution command returns the last response from the server.
AT#FTPMSG=?	Test command returns the **OK** result code.

3.5.7.8.10. FTP Delete - #FTPDELE

#FTPDELE - FTP Delete	SELINT 0 / 1
AT#FTPDELE=<filename>	Execution command, issued during an FTP connection, deletes a file from the remote working directory. Parameter: **<filename>** - string type, it's the name of the file to delete. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: In case of delayed server response, it is necessary to check if ERROR indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary empty. (Checking later #FTPMSG response will match with delayed server response)

#FTPDELE - FTP Delete	SELINT 2
AT#FTPDELE=[<filename>]	Execution command, issued during an FTP connection, deletes a file from the remote working directory. Parameter: **<filename>** - string type, it's the name of the file to delete. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: In case of delayed server response, it is necessary to check if ERROR indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary empty. (Checking later #FTPMSG response will match with delayed server response)
AT#FTPDELE=?	Test command returns the **OK** result code.

3.5.7.8.11. FTP Print Working Directory - #FTPPWD

#FTPPWD - FTP Print Working Directory	SELINT 0 / 1
AT#FTPPWD	Execution command, issued during an FTP connection, shows the current working directory on FTP server. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.

#FTPPWD - FTP Print Working Directory	SELINT 2
AT#FTPPWD	Execution command, issued during an FTP connection, shows the current working directory on FTP server.

#FTPPWD - FTP Print Working Directory	SELINT 2
	Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.
AT#FTPPWD=?	Test command returns the **OK** result code.

3.5.7.8.12. FTP Change Working Directory - #FTPCWD

#FTPCWD - FTP Change Working Directory	SELINT 0 / 1
AT#FTPCWD=<dirname>	Execution command, issued during an FTP connection, changes the working directory on FTP server. Parameter: **<dirname>** - string type, it's the name of the new working directory. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.

#FTPCWD - FTP Change Working Directory	SELINT 2
AT#FTPCWD=[<dirname>]	Execution command, issued during an FTP connection, changes the working directory on FTP server. Parameter: **<dirname>** - string type, it's the name of the new working directory. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet.
AT#FTPCWD=?	Test command returns the **OK** result code.

3.5.7.8.13. FTP List - #FTPLIST

#FTPLIST - FTP List	SELINT 0 / 1
AT#FTPLIST[=<name>]	Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file. Parameter: **<name>** - string type, it's the name of the directory or file. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: issuing **AT#FTPLIST<CR>** opens a data connection and starts getting from the server the list of contents of the working directory.

#FTPLIST - FTP List	SELINT 2
AT#FTPLIST[= [<name>]]	Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file. Parameter: **<name>** - string type, it's the name of the directory or file. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: issuing **AT#FTPLIST<CR>** opens a data connection and starts getting from the server the list of contents of the working directory.
AT#FTPLIST=?	Test command returns the **OK** result code.

3.5.7.8.14. Get file size - #FTPFSIZE

#FTPFSIZE – Get file size from FTP server	SELINT 2
AT#FTPFSIZE= <filename>	Execution command, issued during an FTP connection, permits to get file size of <filename> file. Note: FTPTYPE=0 command has to be issued before FTPFSIZE command, to set file transfer type to binary mode.
AT# FTPFSIZE=?	Test command returns the OK result code.

3.5.7.8.15. FTP Append - #FTPAPP

#FTPAPP - FTP Append	SELINT 2
AT#FTPAPP= [[<filename>], <connMode>]	Execution command, issued during an FTP connection, opens a data connection and append data to existing <filename> file. If the data connection succeeds, a **CONNECT** indication is sent, afterward a NO CARRIER indication is sent when the socket is closed. Note: if we set **<connMode>** to 1, the data connection is openedand we remain in command mode and we see the result code **OK** (instead of **CONNECT**) Parameter: **<filename>** - string type, name of the file. **<connMode>** 0 - online mode 1 – command mode

#FTPAPP - FTP Append	SELINT 2
	Note: use the escape sequence +++ to close the data connection. Note: The command causes an **ERROR** result code to be returned if no FTP connection has been opened yet. Note: The <connMode> parameter is not available in SW 13.00.xxx.
AT#FTPAPP=?	Test command reports the supported range of values for parameters **<filename>** and **<connMode>**

3.5.7.8.16. Send data on a FTP data port while the module is in command mode - #FTPAPPEXT

#FTPAPPEXT – send data on a FTP data port while the module is in command mode	SELINT 2
AT#FTPAPPEXT= <bytestosend>[,< eof >]	This command permits to send data on a FTP data port while the module is in command mode. FTP data port has to be previously opened through **#FTPPUT** (or **#FTPAPP**) with **<connMode>** parameter set to command mode connection. Parameters: **< bytestosend > -** number of bytes to be sent 1..1500 **<eof> -** data port closure 0 – normal sending of data chunk 1 – close data port after sending data chunk The device responds to the command with the prompt <greater_than><space> and waits for the data to send. When **<bytestosend>** bytes have been sent, operation is automatically completed. If (all or part of the) data are successfully sent, then the response is: **#FTPAPPEXT: <sentbytes>** **OK** Where **<sentbytes>** are the number of sent bytes. Note: **<sentbytes>** could be less than **<bytestosend>** If data sending fails for some reason, an error code is reported.

AT#FTPAPPEXT=?	Test command reports the supported range of values for parameters **<bytestosend>** and **<eof>**
Example	*AT#FTPOPEN="IP",username,password* *OK* *AT#FTPPUT=<filename>,1 -> the new param 1 means that we open the connection in* *command mode* *OK* *// Here data socket will stay opened, but interface will be* *//available(command mode)* *AT#FTPAPPEXT=Size* *>… write here the binary data. As soon Size byte are written, data are sent and OK is returned* *#FTPAPPEXT: <SentBytes>* *OK* …… *// Last #FTPAPPEXT will close the data socket, because* *// second(optional) parameter has this meaning:* *AT#FTPAPPEXT=Size,1* *>…write here the binary data. As soon Size byte are written, data are sent and OK is returned* *#FTPAPPEXT: <SentBytes>* *OK* *// If the user has to reopen the data port to send another* *// (or append to the same) file, he can restart with the* *// FTPPUT(or FTPAPP.)* *//Then FTPAPPEXT,… to send the data chunks on the //reopened data port.* *// Note: if while sending the chunks the data port is closed* *// from remote, user will be aware of it because #FTPAPPEXT // will indicate ERROR and cause (available if previously //issued the command AT+CMEE=2) will indicate that* *//socket has been closed.* *// Also in this case obviously, data port will have to be //reopened with*

	FTPPUT and so on…(same sequence)

3.5.7.8.17. Set restart position - # FTPREST

#FTPREST – Set restart position for FTP GET	**SELINT 2**
AT#FTPREST= <restartposition>	Set command sets the restart position for successive FTPGET (or FTPGETPKT) command. It permits to restart a previously interrupted FTP download from the selected position in byte. Parameter: <restartposition> position in byte of restarting for successive FTPGET (or FTPGETPKT) Note: It's necessary to issue FTPTYPE=0 before successive FTPGET (or FTPGETPKT command) to set binary file transfer type. Note: Setting <restartposition> has effect on successive FTP download. After successive successfully initiated FTPGET(or FTPGETPKT) command <restartposition> is automatically reset. Note: value set for <restartposition> has effect on next data transfer(data port opened by FTPGET or FTPGETPKT). Then <restartposition> value is automatically assigned to 0 for next download.
AT# FTPREST?	Read command returns the current <restartposition> #FTPREST: <restartposition>
AT# FTPREST=?	Test command returns the OK result code.

3.5.7.8.18. Receive Data In Command Mode - #FTPRECV

#FTPRECV – Receive Data In Command Mode	**SELINT 2**
AT#FTPRECV= <blocksize>	Execution command permits the user to transfer at most <blocksize> bytes of remote file, provided that retrieving from the FTP server has been started with a previous #FTPGETPKT command, onto the serial port. This number is limited to the current number of bytes of the remote file which have been transferred from the FTP server.

#FTPRECV – Receive Data In Command Mode	SELINT 2
	Parameters: < **blocksize** > - max number of bytes to read 1..3000 Note: it's necessary to have previously opened FTP data port and started download and buffering of remote file through #FTPGETPKT command Note: issuing **#FTPRECV** when there's no FTP data port opened raises an error. Note: data port will stay opened if socket is temporary waiting to receive data(FTPRECV returns 0 and FTPGETPKT gives a EOF 0 indication).
AT# FTPRECV?	Read command reports the number of bytes currently received from FTP server, in the format: #FTPRECV: <available>
AT# FTPRECV=?	Test command returns the range of supported values for <blocksize> parameter.
Example	AT#FTPRECV? #FTPRECV: 3000 OK Read required part of the buffered data: AT#FTPRECV=400 #FTPRECV: 400 Text row number 1 * 111111111111111111111111 * Text row number 2 * 222222222222222222222222 * Text row number 3 * 333333333333333333333333 * Text row number 4 * 444444444444444444444444 * Text row number 5 * 555555555555555555555555 * Text row number 6 * 666666666666666666666666 * Text row number 7 * 777777777777777777777777 * Text row number 8 * 88888888888888888888

#FTPRECV – Receive Data In Command Mode	SELINT 2
	OK AT#FTPRECV =200 #FTPRECV: 200 88888 * Text row number 9 * 99999999999999999999999 * Text row number 10 * AAAAAAAAAAAAAAAAAAAAAAAA * Text row number 12 * BBBBBBBBBBBBBBBBBBBBBBB * Text row number 13 * CCCCCCCCCCCCCCC OK Note: to check when you have received complete file it's possible to use AT#FTPGETPKT read command: AT#FTPGETPKT? #FTPGETPKT: sample.txt,0,1 OK (you will get <eof> set to 1)

3.5.7.8.19. FTP configuration - #FTPCFG

#FTPCFG – ftp configuration	SELINT 2
AT#FTPCFG=<tout>,<IPPignoring>[,<FTPSEn>[,<FTPSendSize>]]	**<tout>** - time-out in 100 ms units 100..5000 - hundreds of ms (factory default is 100) Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel. Note: The parameter is not saved in NVM. **<IPPignoring>** 0: No IP Private ignoring. During a FTP passive mode connection client uses the IP address received from server, even if it is a private IPV4 address. 1: IP Private ignoring enabled. During a FTP passive mode connection if the server sends a private IPV4 address the client doesn't consider this and connects with server using the IP address used in AT#FTPOPEN. Note: obviously during a FTP active mode connection,

	parameter doesn't take effect because it has no meaning. **[,<FTPSEn>]** 0 – Disable FTPS security: all FTP commands will perform plain FTP connections. 1 – Enable FTPS security: from now on any FTP session opened through FTP commands will be compliant to FTPS protocol, providing authentication and encrypted communication. **<FTPSendSize>** - send size to be used by the TCP/IP stack for data sending. It takes effect on send size when FTP upload in online mode is running. Send is not called until **< FTPSendSize>** bytes are reached**,** unless internal transmission timer(5 sec) expires. 0 – select automatically default value(300).. 1 – 1500 – send size in bytes. Note: in order to maintain retrocompatibility, read command (AT#FTPCFG?) doesn't show this parameter until it is set. Once it is set, read command includes it in the response no matter if later it is included or not in set command. Note: in FTPS mode, FTP commands response time is generally bigger than in normal FTP mode. This latency is mainly due to the SSL handshake that has to be done at the opening of the FTP session (#FTPOPEN) and whenever a data exchange is required (#FTPPUT, #FTPGET etcetera). Note: FTP security cannot be enabled if an SSL socket has been activated by means of #SSLD or #SSLFASTD. Moreover, trying to dial an SSL socket when **<enable>**=1 raises an error. Note: any **<enable>** change is forbidden during an open FTP connection (with or without security). Furthermore, SSL configuration settings are forbidden during FTPS connections
AT#FTPCFG?	Read command reports the currently selected parameters in the format: **#FTPCFG: <tout>,<IPPignoring>,<FTPSEn>**
AT+FTPCFG=?	Test command reports the supported range of values for parameter(s) **<tout>,<IPPignoring> and <FTPSEn>**

3.5.7.9. Enhanced IP Easy Extension AT Commands

3.5.7.9.1. Authentication User ID - #USERID

#USERID - Authentication User ID	**SELINT 0 / 1**
AT#USERID [=<user>]	Set command sets the user identification string to be used during the authentication step. Parameter: **<user>** - string type, it's the authentication User Id; the max length for this value is the output of Test command, **AT#USERID=?** (factory default is the empty string ""). Note: If parameter is omitted then the behaviour of Set command is the same of Read command.
AT#USERID?	Read command reports the current user identification string, in the format: **#USERID: <user>**.
AT#USERID=?	Test command returns the maximum allowed length of the string parameter **<user>**.
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

#USERID - Authentication User ID	**SELINT 2**
AT#USERID= [<user>]	Set command sets the user identification string to be used during the authentication step. Parameter: **<user>** - string type, it's the authentication User Id; the max length for this value is the output of Test command, **AT#USERID=?** (factory default is the empty string ""). Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#USERID?	Read command reports the current user identification string, in the format: **#USERID: <user>**
AT#USERID=?	Test command returns the maximum allowed length of the string parameter **<user>**.
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

3.5.7.9.2. Authentication Password - #PASSW

#PASSW - Authentication Password	SELINT 0/1
AT#PASSW=<pwd>	Set command sets the user password string to be used during the authentication step. Parameter: **<pwd>** - string type, it's the authentication password; the max length for this value is the output of Test command, **AT#PASSW=?** (factory default is the empty string "").
AT#PASSW=?	Test command returns the maximum allowed length of the string parameter **<pwd>**.
Example	AT#PASSW="myPassword" OK

#PASSW - Authentication Password	SELINT 2
AT#PASSW=[<pwd>]	Set command sets the user password string to be used during the authentication step. Parameter: **<pwd>** - string type, it's the authentication password; the max length for this value is the output of Test command, **AT#PASSW=?** (factory default is the empty string ""). Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#PASSW=?	Test command returns the maximum allowed length of the string parameter **<pwd>**.
Example	AT#PASSW="myPassword" OK

3.5.7.9.3. Packet Size - #PKTSZ

#PKTSZ - Packet Size	SELINT 0 / 1
AT#PKTSZ[=[<size>]]	Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending. Parameter: **<size>** - packet size in bytes 0 - automatically chosen by the device 1..512 - packet size in bytes (factory default is 300) Note: issuing **AT#PKTSZ<CR>** is the same as issuing the Read command. Note: issuing **AT#PKTSZ=<CR>** is the same as issuing the command **AT#PKTSZ=0<CR>**.
AT#PKTSZ?	Read command reports the current packet size value. Note: after issuing command **AT#PKTSZ=0**, the Read command reports the value automatically chosen by the device.

#PKTSZ - Packet Size	SELINT 0 / 1
AT#PKTSZ=?	Test command returns the allowed values for the parameter **<size>**.
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100 OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 *->value automatically chosen by device* OK

#PKTSZ - Packet Size	SELINT 2
AT#PKTSZ= [<size>]	Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending. Parameter: **<size>** - packet size in bytes 0 - automatically chosen by the device 1..1500 - packet size in bytes (factory default is 300) Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#PKTSZ?	Read command reports the current packet size value. Note: after issuing command **AT#PKTSZ=0**, the Read command reports the value automatically chosen by the device.
AT#PKTSZ=?	Test command returns the allowed values for the parameter **<size>**.
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100 OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 *->value automatically chosen by device* OK

3.5.7.9.4. Data Sending Time-Out - #DSTO

#DSTO - Data Sending Time-Out	SELINT 0 / 1
AT#DSTO[= [<tout>]]	Set command sets the maximum time that the module awaits before sending anyway a packet whose size is less than the default one. Parameter:

#DSTO - Data Sending Time-Out	SELINT 0 / 1
	<tout> - packet sending time-out in 100ms units (factory default is 50) 0 - no time-out, wait forever for packets to be completed before send. 1..255 hundreds of ms Note: In order to avoid low performance issues, it is suggested to set the data sending time-out to a value greater than 5. Note: this time-out applies to data whose size is less than packet size and whose sending would have been delayed for an undefined time until new data to be sent had been received and full packet size reached. Note: issuing **AT#DSTO<CR>** is the same as issuing the Read command. Note: issuing **AT#DSTO=<CR>** is the same as issuing the command **AT#DSTO=0<CR>**.
AT#DSTO?	Read command reports the current data sending time-out value.
AT#DSTO=?	Test command returns the allowed values for the parameter **<tout>**.
Example	AT#DSTO=10 ->1 sec. time-out OK AT#DSTO? #DSTO: 10 OK

#DSTO -Data Sending Time-Out	SELINT 2
AT#DSTO=[<tout>]	Set command sets the maximum time that the module awaits before sending anyway a packet whose size is less than the default one. Parameter: **<tout>** - packet sending time-out in 100ms units (factory default is 50) 0 - no time-out, wait forever for packets to be completed before send. 1..255 hundreds of ms Note: In order to avoid low performance issues, it is suggested to set the data sending time-out to a value greater than 5. Note: this time-out applies to data whose size is less than packet size and whose sending would have been delayed for an undefined time until new data to be sent had been received and full packet size reached. Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#DSTO?	Read command reports the current data sending time-out value.
AT#DSTO=?	Test command returns the allowed values for the parameter **<tout>**.
Example	AT#DSTO=10 ->1 sec. time-out OK AT#DSTO? #DSTO: 10

#DSTO -Data Sending Time-Out	SELINT 2
	OK

3.5.7.9.5. Socket Inactivity Time-Out - #SKTTO

#SKTTO - Socket Inactivity Time-Out	SELINT 0 / 1
AT#SKTTO[= [<tout>]]	Set command sets the maximum time with no data exchanging on the socket that the module awaits before closing the socket and deactivating the GPRS context. Parameter: **<tout>** - socket inactivity time-out in seconds units 0 - no time-out. 1..65535 - time-out in sec. units (factory default is 90). Note: this time-out applies when no data is exchanged through the socket for a long time and therefore the socket connection has to be automatically closed; the GPRS context is deactivated only if it has been activated issuing **#SKTOP**; if it has been activated issuing **#SKTD**, now it stays activated. Note: issuing **AT#SKTTO<CR>** is the same as issuing the Read command. Note: issuing **AT+#SKTTO=<CR>** is the same as issuing the command **AT+#SKTTO=0<CR>**.
AT#SKTTO?	Read command reports the current socket inactivity time-out value.
AT#SKTTO=?	Test command returns the allowed values for parameter **<tout>**.
Example	AT#SKTTO=30 ->(30 sec. time-out) OK AT#SKTTO? #SKTTO: 30 OK

#SKTTO - Socket Inactivity Time-Out	SELINT 2
AT#SKTTO= [<tout>]	Set command sets the maximum time with no data exchanging on the socket that the module awaits before closing the socket and deactivating the GPRS context. Parameter: **<tout>** - socket inactivity time-out in seconds units 0 - no time-out. 1..65535 - time-out in sec. units (factory default is 90). Note: this time-out applies when no data is exchanged in the socket for a long time and therefore the socket connection has to be automatically closed; the GPRS context is deactivated only if it has been activated issuing **#SKTOP**; if it has been activated issuing **#SKTD**, now it stays activated. Note: this command is not allowed for sockets associated to a GSM context (see

#SKTTO - Socket Inactivity Time-Out	SELINT 2
	#SCFG).
AT#SKTTO?	Read command reports the current socket inactivity time-out value.
AT#SKTTO=?	Test command returns the allowed values for parameter **<tout>**.
Example	AT#SKTTO=30 ->(30 sec. time-out) OK AT#SKTTO? #SKTTO: 30 OK

3.5.7.9.6. Socket Definition - #SKTSET

#SKTSET - Socket Definition	SELINT 0 / 1
AT#SKTSET[= <socket type>, <remote port>, <remote addr>, [<closure type>], [<local port>]]	Set command sets the socket parameters values. Parameters: **<socket type>** - socket protocol type 0 - TCP (factory default) 1 - UDP **<remote port>** - remote host port to be opened 0..65535 - port number (factory default is 3333) **<remote addr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string "") **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. **<local port>** - local host port to be used on UDP socket 0..65535 - port number Note: **<closure type>** parameter is valid only for TCP socket type, for UDP sockets shall be left unused. Note: **<local port>** parameter is valid only for UDP socket type, for TCP sockets shall be left unused. Note: The resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the **#SKTSET** command, then error message will be issued. Note: the DNS Query to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set **(#USERID**, **#PASSW**) - the GPRS coverage is enough to permit a connection.

#SKTSET - Socket Definition	SELINT 0 / 1
	Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.
AT#SKTSET?	Read command reports the socket parameters values, in the format: **AT#SKTSET: <socket type>,<remote port>,<remote addr>, <closure type>,<local port>**
AT#SKTSET=?	Test command returns the allowed values for the parameters.
Example	AT#SKTSET=0,1024,"123.255.020.001" OK AT#SKTSET=0,1024,"www.telit.net" OK
Note	Issuing command **#QDNS** will overwrite **<remote addr>** setting.

#SKTSET - Socket Definition	SELINT 2
AT#SKTSET= [<socket type>, <remote port>, <remote addr>, [<closure type>], [<local port>]]	Set command sets the socket parameters values. Parameters: **<socket type>** - socket protocol type 0 - TCP (factory default) 1 - UDP **<remote port>** - remote host port to be opened 0..65535 - port number (factory default is 3333) **<remote addr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string "") **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. **<local port>** - local host port to be used on UDP socket 0..65535 - port number Note: **<closure type>** parameter is valid only for TCP socket type, for UDP sockets shall be left unused. Note: **<local port>** parameter is valid only for UDP socket type, for TCP sockets shall be left unused. Note: The resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the **#SKTSET** command, then an error message will be issued. Note: the DNS Query to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT**

#SKTSET - Socket Definition	SELINT 2
	- the authentication parameters are set (**#USERID**, **#PASSW**) - the GPRS coverage is enough to permit a connection. Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#SKTSET?	Read command reports the socket parameters values, in the format: **AT#SKTSET: <socket type>,<remote port>,<remote addr>,<closure type>,<local port>**
AT#SKTSET=?	Test command returns the allowed values for the parameters.
Example	AT#SKTSET=0,1024,"123.255.020.001" OK AT#SKTSET=0,1024,"www.telit.net" OK
Note	Issuing command **#QDNS** will overwrite **<remote addr>** setting.

3.5.7.9.7. Socket Open - #SKTOP

#SKTOP - Socket Open	SELINT 0 / 1
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by **#USERID** and **#PASSW** commands, and opens a socket connection with the host specified in the **#SKTSET** command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name. If the connection succeeds a **CONNECT** indication is sent, otherwise a **NO CARRIER** indication is sent.
AT#SKTOP?	Read command behaviour is the same as Execution command.
Example	AT#SKTOP *..GPRS context activation, authentication and socket open..* CONNECT

#SKTOP - Socket Open	SELINT 2
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by **#USERID** and **#PASSW** commands, and opens a socket connection with the host specified in the **#SKTSET** command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name. If the connection succeeds a **CONNECT** indication is sent, otherwise a **NO CARRIER** indication is sent. Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#SKTOP=?	Test command returns the **OK** result code.
Example	AT#SKTOP *..GPRS context activation, authentication and socket open..* CONNECT

#SKTOP - Socket Open	SELINT 2
Note	This command is obsolete. It's suggested to use the couple **#SGACT** and **#SO** instead of it.

3.5.7.9.8. Query DNS - #QDNS

#QDNS - Query DNS	SELINT 0 / 1
AT#QDNS=<host name>	Execution command executes a DNS query to solve the host name into an IP address. Parameter: **<host name>** - host name, string type. If the DNS query is successful then the IP address will be reported in the result code, as follows: **#QDNS: <host name>,<IP address>** where **<host name>** - string type **<IP address>** - string type, in the format **"xxx.xxx.xxx.xxx"** Note: the command has to activate the GPRS context if it was not previously activated. In this case the context is deactivated after the DNS query.
Note	This command requires that the authentication parameters are correctly set and that the GPRS network is present.
Note	Issuing command **#QDNS** will overwrite **<remote addr>** setting for command **#SKTSET**.

#QDNS - Query DNS	SELINT 2
AT#QDNS=[<host name>]	Execution command executes a DNS query to solve the host name into an IP address. Parameter: **<host name>** - host name, string type. If the DNS query is successful then the IP address will be reported in the result code, as follows: **#QDNS: <host name>,<IP address>** where **<host name>** - string type **<IP address>** - string type, in the format **"xxx.xxx.xxx.xxx"** Note: the command has to activate the GPRS context if it was not previously

#QDNS - Query DNS	SELINT 2
	activated. In this case the context is deactivated after the DNS query. It also works with GSM context, but the GSM context has to be activated before.
AT#QDNS=?	Test command returns the **OK** result code.
Note	This command requires that the authentication parameters are correctly set and that the GPRS network is present (or GSM, if GSM context is used).
Note	Issuing command **#QDNS** will overwrite **<remote addr>** setting for command **#SKTSET**.
Note	This command is available only on the first virtual port of CMUX and works on the PDP context 1 and on the first ConnId (see AT#SCFG)

3.5.7.9.9. DNS Response Caching - #CACHEDNS

#CACHEDNS – DNS Response Caching	SELINT 2
AT#CACHEDNS= [<mode>]	Set command enables caching a mapping of domain names to IP addresses, as does a resolver library. Parameter: **<mode>** 0 - caching disabled; it cleans the cache too 1 - caching enabled Note: the validity period of each cached entry (i.e. how long a DNS response remains valid) is determined by a value called the **Time To Live** (**TTL**), set by the administrator of the DNS server handing out the response. Note: If the cache is full (8 elements) and a new IP address is resolved, an element is deleted from the cache: the one that has not been used for the longest time. Note: it is recommended to clean the cache, if command **+CCLK** has been issued while the DNS Response Caching was enabled.
AT#CACHEDNS?	Read command reports whether the DNS Response Caching is currently enabled or not, in the format: **#CACHEDNS: <mode>**
AT#CACHEDNS=?	Test command returns the currently cached mapping along with the range of available values for parameter **<mode>**, in the format: **#CACHEDNS: [<hostn*1*>,<IPaddr*1*>,[…,[<hostn*n*>,<IPaddr*n*>,]]](0,1)** where: **<hostn*n*>** - hostname, string type **<IPaddr*n*>** - IP address, string type, in the format **"xxx.xxx.xxx.xxx"**

3.5.7.9.10. Manual DNS Selection - #DNS

#DNS – Manual DNS Selection	**SELINT 2**
AT#DNS=<cid>, <primary>, <secondary>	Set command allows to manually set primary and secondary DNS servers either for a PDP context defined by **+CGDCONT** or for a GSM context defined by **#GSMCONT** Parameters: **<cid>** - context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition **<primary>** - **manual primary DNS server**, string type, in the format **"xxx.xxx.xxx.xxx"** used for the specified cid; we're using this value instead of the **primary DNS server** come from the network (default is "0.0.0.0") **<secondary>** - **manual secondary DNS server**, string type, in the format **"xxx.xxx.xxx.xxx"** used for the specified cid; we're using this value instead of the **secondary DNS server** come from the network (default is "0.0.0.0"). Note: if **<primary> is "0.0.0.0"** and **<secondary> is not "0.0.0.0"**, then issuing **AT#DNS=…** raises an error. Note: if **<primary> is "0.0.0.0"** we're using the **primary DNS server** come from the network as consequence of a context activation. Note: if **<primary> is not "0.0.0.0"** and **<secondary> is "0.0.0.0"**, then we're using only the **manual primary DNS server.** Note: the context identified by **<cid>** has to be previously defined, elsewhere issuing **AT#DNS=…** raises an error. Note: the context identified by **<cid>** has to be not activated yet, elsewhere issuing **AT#DNS=…** raises an error.
AT#DNS?	Read command returns the manual DNS servers set either for every defined PDP context and for the single GSM context (only if defined), in the format: **[#DNS: <cid>,<primary>,<secondary>[<CR><LF>** **#DNS: <cid>,<primary>,<secondary>]]**
AT#DNS=?	Test command reports the supported range of values for the **<cid>** parameter.only, in the format: **#DNS: (0-5),,**

3.5.7.9.11. DNS from Network - #NWDNS

#NWDNS – DNS from Network	SELINT 2
AT#NWDNS=[<cid>[,<cid>[,…]]]	Execution command returns either the primary and secondary DNS addresses for the GSM context (if specified) and/or a list of primary and secondary DNS addresses for the specified PDP context identifiers Parameters: **<cid>** - context identifier 0 - specifies the GSM context (see **+GSMCONT**). 1..5 - numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command). Note: if no **<cid>** is specified, the DNS addresses for all **defined** contexts are returned. Note: issuing the command with more than 6 parameters raises an error. Note: the command returns only one row of information for every specified **<cid>**, even if the same **<cid>** is present more than once. The command returns a row of information for every specified **<cid>** whose context has been already defined. No row is returned for a **<cid>** whose context has not been defined yet. Response format is: **#NWDNS: <cid>,<PDNSaddress>,<SDNSaddress>[<CR><LF>** **#NWDNS: <cid>,<PDNSaddress>,<SDNSaddress> […]]** where: **<cid>** - context identifier, as before **<PDNSaddress>,<SDNSaddress>** - primary and secondary DNS addresses set through AT#DNS command. If not set, they are the primary and secondary DNS addresses assigned during the PDP(or GSM) context activation.
AT#NWDNS=?	Test command returns a list of defined **<cid>**s.

3.5.7.9.12. Socket TCP Connection Time-Out - #SKTCT

#SKTCT - Socket TCP Connection Time-Out	SELINT 0 / 1
AT#SKTCT[=<tout>]	Set command sets the TCP connection time-out for the first **CONNECT** answer from the TCP peer to be received. Parameter: **<tout>** - TCP first **CONNECT** answer time-out in 100ms units 10..1200 - hundreds of ms (factory default value is 600). Note: this time-out applies only to the time that the TCP stack waits for the

#SKTCT - Socket TCP Connection Time-Out	SELINT 0 / 1
	CONNECT answer to its connection request. Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time-out. Note: if parameter is omitted then the behaviour of Set command is the same as Read command.
AT#SKTCT?	Read command reports the current TCP connection time-out.
AT#SKTCT=?	Test command returns the allowed values for parameter **<tout>**.
Example	AT#SKTCT=600 OK *socket first connection answer time-out has been set to 60 s.*

#SKTCT - Socket TCP Connection Time-Out	SELINT 2
AT#SKTCT=[<tout>]	Set command sets the TCP connection time-out for the first **CONNECT** answer from the TCP peer to be received. Parameter: **<tout>** - TCP first **CONNECT** answer time-out in 100ms units 10..1200 - hundreds of ms (factory default value is 600). Note: this time-out applies only to the time that the TCP stack waits for the **CONNECT** answer to its connection request. Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time-out. Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#SKTCT?	Read command reports the current TCP connection time-out.
AT#SKTCT=?	Test command returns the allowed values for parameter **<tout>**.
Example	AT#SKTCT=600 OK *socket first connection answer time-out has been set to 60 s.*

3.5.7.9.13. Socket Parameters Save - #SKTSAV

#SKTSAV - Socket Parameters Save	SELINT 0 / 1
AT#SKTSAV	Execution command stores the current socket parameters in the NVM of the device. The socket parameters to store are: - User ID - Password - Packet Size

#SKTSAV - Socket Parameters Save	SELINT 0 / 1
	- Socket Inactivity Time-Out - Data Sending Time-Out - Socket Type (UDP/TCP) - Remote Port - Remote Address - TCP Connection Time-Out
Example	AT#SKTSAV OK *socket parameters have been saved in NVM*
Note	If some parameters are not previously specified then a default value will be stored.

#SKTSAV - Socket Parameters Save	SELINT 2
AT#SKTSAV	Execution command stores the current socket parameters in the NVM of the device. The socket parameters to store are: - User ID - Password - Packet Size - Socket Inactivity Time-Out - Data Sending Time-Out - Socket Type (UDP/TCP) - Remote Port - Remote Address - TCP Connection Time-Out Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#SKTSAV=?	Test command returns the **OK** result code.
Example	AT#SKTSAV OK *socket parameters have been saved in NVM*
Note	If some parameters have not been previously specified then a default value will be stored.

3.5.7.9.14. Socket Parameters Reset - #SKTRST

#SKTRST - Socket Parameters Reset	SELINT 0 / 1
AT#SKTRST	Execution command resets the socket parameters to the "factory default" configuration and stores them in the NVM of the device. The socket parameters to reset are: - User ID - Password - Packet Size - Socket Inactivity Time-Out - Data Sending Time-Out

#SKTRST - Socket Parameters Reset	SELINT 0 / 1
	- Socket Type - Remote Port - Remote Address - TCP Connection Time-Out
Example	AT#SKTRST OK *socket parameters have been reset*

#SKTRST - Socket Parameters Reset	SELINT 2
AT#SKTRST	Execution command resets the socket parameters to the "factory default" configuration and stores them in the NVM of the device. The socket parameters to reset are: - User ID - Password - Packet Size - Socket Inactivity Time-Out - Data Sending Time-Out - Socket Type - Remote Port - Remote Address - TCP Connection Time-Out
AT#SKTRST=?	Test command returns the **OK** result code.
Example	AT#SKTRST OK *socket parameters have been reset*

3.5.7.9.15. GPRS Context Activation - #GPRS

#GPRS - GPRS Context Activation	SELINT 0 / 1
AT#GPRS[=[<mode>]]	Execution command deactivates/activates the GPRS context, eventually proceeding with the authentication with the parameters given with **#PASSW** and **#USERID**. Parameter: **<mode>** - GPRS context activation mode 0 - GPRS context deactivation request 1 - GPRS context activation request In the case that the GPRS context has been activated, the result code **OK** is preceded by the intermediate result code: **+IP: <ip_address_obtained>** reporting the local IP address obtained from the network. Note: issuing **AT#GPRS<CR>** reports the current status of the GPRS context, in the format:

#GPRS - GPRS Context Activation	SELINT 0 / 1
	#GPRS: <status> where: **<status>** 0 - GPRS context deactivated 1 - GPRS context activated 2 - GPRS context activation pending. Note: issuing **AT#GPRS=<CR>** is the same as issuing the command **AT#GPRS=0<CR>**. Note: if you request a GPRS context deactivation during a call issuing either **AT#GPRS=0** or **AT#EMAILACT=0** and then, after the call termination, you want to request a GPRS context activation through **#GPRS**, you **need** to issue the following sequence of three commands **AT#GPRS=1** **OK** **AT#GPRS=0** **OK** **AT#GPRS=1** **OK**
AT#GPRS?	Read command has the same effect as the Execution command **AT#GPRS<CR>.**
AT#GPRS=?	Test command returns the allowed values for parameter **<mode>**.
Example	AT#GPRS=1 +IP: 129.137.1.1 OK *Now GPRS Context has been activated and our IP is 129.137.1.1* AT#GPRS=0 OK *Now GPRS context has been deactivated, IP is lost.*
Note	It is strongly recommended to use the same command (e.g. **#GPRS**) to activate the context, deactivate it and interrogate about its status.

#GPRS - GPRS Context Activation	SELINT 2
AT#GPRS= **[<mode>]**	Execution command deactivates/activates the **PDP context #1**, eventually proceeding with the authentication with the parameters given with **#PASSW** and **#USERID**. Parameter: **<mode> - PDP context** activation mode 0 - **PDP context #1** deactivation request 1 - **PDP context #1** activation request

#GPRS - GPRS Context Activation	SELINT 2
	In the case that the **PDP context #1** has been activated, the result code **OK** is preceded by the intermediate result code: **+IP: <ip_address_obtained>** reporting the local IP address obtained from the network. Note: at least a **socket identifier** needs to be associated with **PDP context #1** in order to every **#GPRS** action be effective; by default the **PDP context #1** is associated with **socket identifiers 1**, **2** and **3**, but it is possible to modify these associations through **#SCFG**. Trying to issue a **#GPRS** action when **no socket identifier** is associated with **PDP context #1** raises an error. Note: if the **PDP context #1** has been activated issuing **AT#GPRS=1**, then • if you request to deactivate the **PDP context #1** issuing **AT#EMAILACT=0** an **ERROR** is raised and nothing happens • if you request to deactivate the **PDP context #1 during a call** issuing **AT#GPRS=0** and then, after the call termination, you want to activate the **PDP context #1** again through **#GPRS**, you **need** to issue the following sequence of three commands **AT#GPRS=1** **OK** **AT#GPRS=0** **OK** **AT#GPRS=1** **OK** *(Analogous considerations if you want to request the activation of **PDP context #1** issuing **AT#EMAILACT=1**, see **#EMAILACT**)* Note: this command is not allowed if GSM context has been activated (see **AT#SGACT=0,1**).
AT#GPRS?	Read command reports the current status of the **PDP context #1**, in the format: **#GPRS: <status>** where: **<status>** 0 - **PDP context #1** deactivated 1 - **PDP context #1** activated 2 - **PDP context #1** activation pending.
AT#GPRS=?	Test command returns the allowed values for parameter **<mode>**.
Example	AT#GPRS=1 +IP: 129.137.1.1 OK *Now **PDP Context #1** has been activated and our IP is 129.137.1.1*

#GPRS - GPRS Context Activation	SELINT 2
	AT#GPRS=0 OK *Now **PDP Context #1** has been deactivated, IP is lost.*
Note	It is strongly recommended to use the same command (e.g. **#GPRS**) to activate the context, deactivate it and interrogate about its status.

3.5.7.9.16. Socket Dial - #SKTD

#SKTD - Socket Dial	SELINT 0 / 1
AT#SKTD **[=<socket type>,** **<remote port>,** **<remote addr>,** **[<closure type>],** **[<local port>]]**	Set command opens the socket towards the peer specified in the parameters. Parameters: **<socket type>** - socket protocol type 0 - TCP (factory default) 1 - UDP **<remote port>** - remote host port to be opened 0..65535 - port number (factory default is 0) **<remote addr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string “”) **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. **<local port>** - local host port to be used on UDP socket 0..65535 - port number Note: **<closure type>** parameter is valid only for TCP socket type, for UDP sockets shall be left unused. Note: **<local port>** parameter is valid only for UDP socket type, for TCP sockets shall be left unused. Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the **#SKTD** command, then an error message will be issued. Note: the command to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set **(#USERID**, **#PASSW**) the GPRS coverage is enough to permit a connection - the GPRS has been activated with **AT#GPRS=1**

#SKTD - Socket Dial	SELINT 0 / 1
	Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.
AT#SKTD?	Read command reports the socket dial parameters values, in the format: **AT#SKTD: <socket type>,<remote port>,<remote addr>,** **<closure type>,<local port>**
AT#SKTD=?	Test command returns the allowed values for the parameters.
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT *In this way my local port 1025 is opened to the remote port 1024* AT#SKTD=0,1024,"www.telit.net", 255 CONNECT
Note	The main difference between this command and **#SKTOP** is that this command does not interact with the GPRS context status, leaving it **ON** or **OFF** according to the **#GPRS** setting, therefore when the connection made with **AT#SKTD** is closed the context (and hence the local IP address) is maintained.

#SKTD - Socket Dial	SELINT 2
AT#SKTD= **[<socket type>,** **<remote port>,** **<remote addr>,** **[<closure type>],** **[<local port>]]**	Set command opens the socket towards the peer specified in the parameters. Parameters: **<socket type>** - socket protocol type 0 - TCP (factory default) 1 - UDP **<remote port>** - remote host port to be opened **1**..65535 - port number **<remote addr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string "") **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. **<local port>** - local host port to be used on UDP socket 0..65535 - port number Note: **<closure type>** parameter is valid only for TCP socket type, for UDP sockets shall be left unused. Note: **<local port>** parameter is valid only for UDP socket type, for TCP sockets shall be left unused.

#SKTD - Socket Dial	SELINT 2
	Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the **#SKTD** command, then an error message will be issued. Note: the command to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set **(#USERID**, **#PASSW**) the GPRS coverage is enough to permit a connection - the GPRS has been activated with **AT#GPRS=1** Note: this command is not allowed for sockets associated to a GSM context (see **#SCFG**).
AT#SKTD?	Read command reports the socket dial parameters values, in the format: **AT#SKTD: <socket type>,<remote port>,<remote addr>, <closure type>,<local port>**
AT#SKTD=?	Test command returns the allowed values for the parameters.
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT *In this way my local port 1025 is opened to the remote port 1024* AT#SKTD=0,1024,"www.telit.net", 255 CONNECT
Note	The main difference between this command and **#SKTOP** is that this command does not interact with the GPRS context status, leaving it **ON** or **OFF** according to the **#GPRS** setting, therefore when the connection made with **#SKTD** is closed the context (and hence the local IP address) is maintained.

3.5.7.9.17. Socket Listen - #SKTL

#SKTL - Socket Listen	SELINT 0 / 1
AT#SKTL [=<mode>, <socket type>, <input port>, [<closure type>]]	Execution command opens/closes the socket listening for connection requests. Parameters: **<mode>** - socket mode 0 - closes socket listening 1 - starts socket listening **<socket type>** - socket protocol type 0 - TCP **<input port>** - local host input port to be listened 0..65535 - port number **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default)

#SKTL - Socket Listen	SELINT 0 / 1
	255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. Command returns the **OK** result code if successful. Note: the command to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set (**#USERID**, **#PASSW**) - the GPRS coverage is enough to permit a connection - the GPRS has been activated with **AT#GPRS=1** When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command **#FRWL**), an unsolicited code is reported: **+CONN FROM: <remote addr>** Where: **<remote addr>** - host address of the remote machine that contacted the device. When the connection is established the **CONNECT** indication is given and the modem goes into data transfer mode. On connection close or when context is closed with **#GPRS=0** the socket is closed and no listen is anymore active. If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported: **#SKTL: ABORTED** Note: if all parameters are omitted the command returns the current socket listening **status** and the last settings of parameters **<input port>** and **<closure type>**, in the format: **#SKTL: <status>,<input port>,<closure type>** where **<status>** - socket listening status 0 - socket not listening 1 - socket listening
AT#SKTL?	Read command has the same effect as Execution command when parameters are omitted.
AT#SKTL=?	Test command returns the allowed values for parameters **<mode>**, **<input port>** and **<closure type>**.
Example	*Activate GPRS* AT#GPRS=1 +IP: ###.###.###.###

#SKTL - Socket Listen	SELINT 0 / 1
	OK *Start listening* AT#SKTL=1,0,1024 OK or AT#SKTL=1,0,1024,255 OK *Receive connection requests* +CONN FROM: 192.164.2.1 CONNECT *exchange data with the remote host* *send escape sequence* +++ NO CARRIER *Now listen is not anymore active* *to stop listening* AT#SKTL=0,0,1024, 255 OK
Note	The main difference between this command and the **#SKTD** is that **#SKTL** does not contact any peer, nor does any interaction with the GPRS context status, leaving it **ON** or **OFF** according to the **#GPRS** setting, therefore when the connection made with **#SKTL** is closed the context (and hence the local IP address) is maintained. The improving command **@SKTL** has been defined.

#SKTL - Socket Listen	SELINT 2
AT#SKTL =[<mode>, <socket type>, <input port>, [<closure type>]]	Execution command opens/closes the socket listening for connection requests. Parameters: **<mode>** - socket mode 0 - closes socket listening 1 - starts socket listening **<socket type>** - socket protocol type 0 -TCP (default) 1- UDP **<input port>** - local host input port to be listened **1**..65535 - port number **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. Command returns the **OK** result code if successful. Note: the command to be successful requests that:

#SKTL - Socket Listen	SELINT 2
	- the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set (**#USERID**, **#PASSW**) - the GPRS coverage is enough to permit a connection - the GPRS has been activated with **AT#GPRS=1** When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command **#FRWL**), an unsolicited code is reported: **+CONN FROM: <remote addr>** Where: **<remote addr>** - host address of the remote machine that contacted the device. When the connection is established the **CONNECT** indication is given and the modem goes into data transfer mode. On connection close or when context is closed with **#GPRS=0** the socket is closed and no listen is anymore active. If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported: **#SKTL: ABORTED** Note: when closing the listening socket <input port> is a don't care parameter
AT#SKTL?	Read command returns the current socket listening **status** and the last settings of parameters **<input port>** and **<closure type>**, in the format: **#SKTL: <status>,<socket type>, <input port>,<closure type>** Where **<status>** - socket listening status 0 - socket not listening 1 - socket listening
AT#SKTL=?	Test command returns the allowed values for parameters **<mode>**, **<socket type>**, **<input port>** and **<closure type>**.
Example	*Activate GPRS* AT#GPRS=1 +IP: ###.###.###.### OK *Start TCP listening* AT#SKTL=1,0,1024 OK or AT#SKTL=1,0,1024,255

#SKTL - Socket Listen		SELINT 2
	OK *Receive TCP connection requests* +CONN FROM: 192.164.2.1 CONNECT *exchange data with the remote host* *send escape sequence* +++ NO CARRIER *Now listen is not anymore active* *to stop listening* AT#SKTL=0,0,1024, 255 OK	
Note	The main difference between this command and **#SKTD** is that **#SKTL** does not contact any peer, nor does any interaction with the GPRS context status, leaving it **ON** or **OFF** according to the **#GPRS** setting, therefore when the connection made with **#SKTL** is closed the context (and hence the local IP address) is maintained.	

3.5.7.9.18. Socket Listen Improved - @SKTL

@SKTL - Socket Listen Improved		SELINT 0 / 1
AT@SKTL **[=<mode>,** **<socket type>,** **<input port>,** **[<closure type>]]**	Execution command opens/closes the socket listening for connection requests. Parameters: **<mode>** - socket mode 0 - closes socket listening 1 - starts socket listening **<socket type>** - socket protocol type 0 - TCP **<input port>** - local host input port to be listened 0..65535 - port number **<closure type>** - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. Command returns the **OK** result code if successful. Note: the command to be successful requests that: - the GPRS context 1 is correctly set with **+CGDCONT** - the authentication parameters are set (**#USERID**, **#PASSW**) - the GPRS coverage is enough to permit a connection - the GPRS has been activated with **AT#GPRS=1**	

@SKTL - Socket Listen Improved	**SELINT 0 / 1**
	When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command **#FRWL**), an unsolicited code is reported: **+CONN FROM: <remote addr>** Where: **<remote addr>** - host address of the remote machine that contacted the device. When the connection is established the **CONNECT** indication is given and the modem goes into data transfer mode. On connection close or when context is closed with **#GPRS=0** the socket is closed and no listen is anymore active. If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported: **@SKTL: ABORTED** Note: if all parameters are omitted the command returns the current socket listening **status** and the last settings of parameters **<socket type>**, **<input port>** and **<closure type>**, in the format: **@SKTL: <status>,<socket type>,<input port>,<closure type>** Where **<status>** - socket listening status 0 - socket not listening 1 - socket listening
AT@SKTL?	Read command has the same effect as Execution command when parameters are omitted.
AT@SKTL=?	Test command returns the allowed values for parameters **<mode>**, **<socket type>**, **<input port>** and **<closure type>**.
Example	*Activate GPRS* AT#GPRS=1 +IP: ###.###.###.### OK *Start listening* AT@SKTL=1,0,1024 OK or AT@SKTL=1,0,1024,255 OK *Receive connection requests* +CONN FROM: 192.164.2.1 CONNECT

@SKTL - Socket Listen Improved	**SELINT 0 / 1**
	exchange data with the remote host *send escape sequence* +++ NO CARRIER *Now listen is not anymore active* *to stop listening* AT@SKTL=0,0,1024, 255 OK
Note	The main difference between this command and the **#SKTD** is that **@SKTL** does not contact any peer, nor does any interaction with the GPRS context status, leaving it **ON** or **OFF** according to the **#GPRS** setting, therefore when the connection made with **@SKTL** is closed the context (and hence the local IP address) is maintained.

3.5.7.9.19. Firewall Setup - #FRWL

#FRWL - Firewall Setup	**SELINT 0 / 1**
AT#FRWL[= **<action>,** **<ip_addr>,** **<net_mask>]**	Execution command controls the internal firewall settings. Parameters: **<action>** - command action 0 - remove selected chain 1 - add an **ACCEPT** chain 2 - remove all chains (**DROP** everything); **<ip_addr>** and **<net_mask>** has no meaning in this case. **<ip_addr>** - remote address to be added into the **ACCEPT** chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx **<net_mask>** - mask to be applied on the **<ip_addr>**; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx Command returns **OK** result code if successful. Note: the firewall applies for incoming (listening) connections only. Firewall general policy is **DROP**, therefore all packets that are not included into an **ACCEPT** chain rule will be silently discarded. When a packet comes from the IP address **incoming_IP**, the firewall chain rules will be scanned for matching with the following criteria: **incoming_IP & <net_mask> = <ip_addr> & <net_mask>** If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.

#FRWL - Firewall Setup	SELINT 0 / 1
	Note: If all parameters are omitted the command reports the list of all **ACCEPT** chain rules registered in the Firewall settings in the format: **#FRWL: <ip_addr>,<net_mask>** **#FRWL: <ip_addr>,<net_mask>** **….** **OK**
AT#FRWL?	Read command has the same effect as Execution command when parameters are omitted.
AT#FRWL=?	Test command returns the allowed values for parameter **<action>.**
Example	*Let assume we want to accept connections only from our devices which are on the IP addresses ranging from* *197.158.1.1 to 197.158.255.255* *We need to add the following chain to the firewall:* AT#FRWL=1,"197.158.1.1","255.255.0.0" OK
Note	For outgoing connections made with **#SKTOP** and **#SKTD** the remote host is dynamically inserted into the **ACCEPT** chain for all the connection duration. Therefore the **#FRWL** command shall be used only for defining either the **#SKTL** or the **@SKTL** behaviour, deciding which hosts are allowed to connect to the local device. Rules are not saved in NVM, at startup the rules list will be empty.

#FRWL - Firewall Setup	SELINT 2
AT#FRWL= **[<action>,** **<ip_address>,** **<net mask>]**	Execution command controls the internal firewall settings. Parameters: **<action>** - command action 0 - remove selected chain 1 - add an **ACCEPT** chain 2 - remove all chains (**DROP** everything); **<ip_addr>** and **<net_mask>** has no meaning in this case. **<ip_addr>** - remote address to be added into the **ACCEPT** chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx **<net_mask>** - mask to be applied on the **<ip_addr>**; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx Command returns **OK** result code if successful. Note: the firewall applies for incoming (listening) connections only. Firewall general policy is **DROP**, therefore all packets that are not included into an **ACCEPT** chain rule will be silently discarded. When a packet comes from the IP address **incoming_IP**, the firewall chain rules will be scanned for matching with the following criteria:

#FRWL - Firewall Setup	SELINT 2
	incoming_IP & <net_mask> = <ip_addr> & <net_mask> If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.
AT#FRWL?	Read command reports the list of all **ACCEPT** chain rules registered in the Firewall settings in the format: **#FRWL: <ip_addr>,<net_mask>** **#FRWL: <ip_addr>,<net_mask>** **….** **OK**
AT#FRWL=?	Test command returns the allowed values for parameter **<action>.**
Example	*Let assume we want to accept connections only from our devices which are on the IP addresses ranging from* *197.158.1.1 to 197.158.255.255* *We need to add the following chain to the firewall:* AT#FRWL=1,"197.158.1.1","255.255.0.0" OK
Note	For outgoing connections made with **#SKTOP** and **#SKTD** the remote host is dynamically inserted into the **ACCEPT** chain for all the connection duration. Therefore the **#FRWL** command shall be used only for defining the **#SKTL** behaviour, deciding which hosts are allowed to connect to the local device. Rules are not saved in NVM, at startup the rules list will be empty.

3.5.7.9.20. Firewall Setup for IPV6 addresses - #FRWLIPV6

#FRWLIPV6 - Firewall Setup for IPV6 addresses	SELINT 2
AT#FRWLIPV6= **[<action>,** **<ip_address>,** **<net mask>]**	Execution command controls the internal firewall settings for IPV6 addresses. Parameters: **<action>** - command action 0 - remove selected chain 1 - add an **ACCEPT** chain 2 - remove all chains (**DROP** everything); **<ip_addr>** and **<net_mask>** has no meaning in this case. **<ip_addr>** - remote address to be added into the **ACCEPT** chain; string type, it can be any valid IP address in the format xxx.xxx.xxx.xxx. xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx or in the format yyyy:yyyy:yyyy:yyyy:yyyy:yyyy:yyyy:yyyy **<net_mask>** - mask to be applied on the **<ip_addr>**; string type, it

	can be any valid IP address mask in the format xxx.xxx.xxx.xxx. xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx or in the format yyyy:yyyy:yyyy:yyyy:yyyy:yyyy:yyyy:yyyy Command returns **OK** result code if successful. Note: the firewall applies for incoming (listening) connections only. Firewall general policy is **DROP**, therefore all packets that are not included into an **ACCEPT** chain rule will be silently discarded. When a packet comes from the IP address **incoming_IP**, the firewall chain rules will be scanned for matching with the following criteria: **incoming_IP & <net_mask> = <ip_addr> & <net_mask>** If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.
AT#FRWLIPV6?	Read command reports the list of all **ACCEPT** chain rules registered in the Firewall settings in the format: **#FRWLIPV6: <ip_addr>,<net_mask>** **#FRWLIPV6: <ip_addr>,<net_mask>** **….** **OK**
AT#FRWLIPV6=?	Test command returns the allowed values for parameter **<action>.**

3.5.7.9.21. GPRS Data Volume - #GDATAVOL

#GDATAVOL - GPRS Data Volume	**SELINT 2**
AT#GDATAVOL=[<mode>]	Execution command reports, for every active PDP context, the amount of data the last GPRS session (and the last GSM session, if GSM context is active) received and transmitted, or it will report the total amount of data received and transmitted during all past GPRS (and GSM) sessions, since last reset. Parameter: **<mode>** 0 - it resets the GPRS data counter for the all the available PDP contexts (1-5) and GSM data counter for GSM context 0 1 - it reports the last GPRS session data counter for the all the set PDP contexts (i.e. all the PDP contexts with APN parameter set using **+CGDCONT**) (and the last GSM session data counter for the GSM context, if set through **#GSMCONT**), in the format:

#GDATAVOL - GPRS Data Volume	SELINT 2
	#GDATAVOL: <cid*n*>,<tot*n*>,<sent*n*>,<received*n*>[<CR><LF> **#GDATAVOL: <cid*m*>,<tot*m*>,<sent*m*>,<received*m*>[…]]** where: **<cid*n*>** - PDP context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition **<tot*n*>** - number of bytes either received or transmitted in the last GPRS (or GSM) session for **<cid*n*>** PDP context; **<sent*n*>** - number of bytes transmitted in the last GPRS (or GSM) session for **<cid*n*>** PDP context; **<received*n*>** - number of bytes received in the last GPRS (or GSM) session for **<cid*n*>** PDP context; 2 - it reports the total GPRS data counter, since last reset, for the all the set PDP contexts (i.e. all the PDP context with APN parameter set using **+CGDCONT**) and the total GSM data counter for the GSM context, if set through **#GSMCONT**, in the format: **#GDATAVOL: <cid*n*>,<tot*n*>,<sent*n*>,<received*n*>[<CR><LF>** **#GDATAVOL: <cid*m*>,<tot*m*>,<sent*m*>,<received*m*>[…]]** where: **<cid*n*>** - PDP context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition **<tot*n*>** - number of bytes either received or transmitted, in every GPRS (or GSM) session since last reset, for **<cid*n*>** PDP context; **<sent*n*>** - number of bytes transmitted, in every GPRS (or GSM) session since last reset, for **<cid*n*>** PDP context; **<received*n*>** - number of bytes received, in every GPRS (or GSM) session since last reset, for **<cid*n*>** PDP context; Note: last GPRS and GSM session counters are not saved in NVM so they are loosen at power off. Note: total GPRS and GSM session counters are saved on NVM.
AT#GDATAVOL=?	Test command returns the range of supported values for parameter **<mode>.**

3.5.7.9.22. ICMP Ping Support - #ICMP

#ICMP - ICMP Ping Support	SELINT 2
AT#ICMP=<mode>	Set command enables/disables the ICMP Ping support. Parameter: **<mode>** 0 - disable ICMP Ping support (default)

#ICMP - ICMP Ping Support	SELINT 2
	1 - enable firewalled ICMP Ping support: the module is sending a proper ECHO_REPLY only to a subset of IP Addresses pinging it; this subset of IP Addresses has been previously specified through **#FRWL** (see) 2 - enable free ICMP Ping support; the module is sending a proper ECHO_REPLY to every IP Address pinging it.
AT#ICMP?	Read command returns whether the ICMP Ping support is currently enabled or not, in the format: **#ICMP: <mode>**
AT#ICMP=?	Test command reports the supported range of values for the **<mode>** parameter.

3.5.7.9.23. Maximum TCP Payload Size - #TCPMAXDAT

#TCPMAXDAT - Maximum TCP Payload Size	SELINT 2
AT#TCPMAXDAT= <size>	Set command allows to set the maximum TCP payload size in TCP header options. Parameter: **<size>** - maximum TCP payload size accepted in one single TCP/IP datagram; it is sent in TCP header options in SYN packet. 0 - the maximum TCP payload size is automatically handled by module (default). 496..1420 - maximum TCP payload size
AT#TCPMAXDAT?	Read command reports the current maximum TCP payload size, in the format: **#TCPMAXDAT: <size>**
AT#TCPMAXDAT=?	Test command reports the supported range of values for parameter **<size>**

3.5.7.9.24. TCP Reassembly - #TCPREASS

#TCPREASS - TCP Reassembly	SELINT 2
AT#TCPREASS= <n>	Set command enables/disables the **TCP reassembly feature**, in order to handle fragmented TCP packets. Parameter: **<n>** 0 - disable TCP reassembly feature 1 - enable TCP reassembly feature (default)
AT#TCPREASS?	Read command returns whether the TCP reassembly feature is enabled or not, in the format: **#TCPREASS: <n>**

#TCPREASS - TCP Reassembly	SELINT 2
AT#TCPREASS=?	Test command returns the supported range of values for parameter **<n>**.

3.5.7.9.25. PING request - #PING

#PING – Send PING request	SELINT 2
AT#PING=<IPaddr>[,<retryNum>[,<len>[,<timeout>[,<ttl>]]]]	This command is used to send Ping Echo Request messages and to receive the corresponding Echo Reply. Parameters: **<IPaddr>** - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx.xxx" - any host name to be solved with a DNS query **<retryNum>** - the number of Ping Echo Request to send 1-64 (default 4) **<len>** - the lenght of Ping Echo Request message 32-1460 (default 32) **<timeout>** - the timeout, in 100 ms units, waiting a single Echo Reply 1-600 (default 50) **<ttl>** - time to live 1-255 (default 128) Once the single Echo Reply message is receive a string like that is displayed: **#PING: <replyId>,<Ip Address>,<replyTime>,<ttl>** Where: **<replyId>** - Echo Reply number **<Ip Address>** - IP address of the remote host **<replyTime>** - time, in 100 ms units, required to receive the response **<ttl>** - time to live of the Echo Reply message Note1: when the Echo Request timeout expires (no reply received on time) the response will contain **<replyTime>** set to 600 and **<ttl>** set to 255 Note2: To receive the corresponding Echo Reply is not required to enable separately AT#ICMP Note3: Before send PING Request the GPRS context must have been activated by AT#SGACT=1,1
AT#PING=?	Test command reports the supported range of values for the **#PING** command parameters.
Example	AT#PING="www.telit.com"

#PING – Send PING request		SELINT 2
	#PING: 01,"81.201.117.177",6,50 #PING: 02,"81.201.117.177",5,50 #PING: 03,"81.201.117.177",6,50 #PING: 04,"81.201.117.177",5,50 OK	

3.5.7.10. E-mail Management AT Commands

3.5.7.10.1. Configure SMTP parameters - #SMTPCFG

#SMTPCFG – configure SMTP parameters	SELINT 2
AT#SMTPCFG=<ssl_enabled>[,<port>[,<mode>[,<charset>[,<UNUSED_1>[,<UNUSED_2>]]]]]	This command sets the parameters needed to the SMTP connection Parameters: **<ssl_enabled>** - Numeric parameter indicating if the SSL encryption is enabled. 0 – SSL encryption disabled (default) 1 – SSL encryption enabled **<port>:** SMTP port to contact (default 25) 25..465, 587. **<mode>** - SMTP start session command 0 – SMTP start session command HELO (default) 1 – SMTP start session command EHLO **<charset>** - Numeric parameter indicating the character encoding used in e-mail text and subject 0 - US-ASCII (default) 1 - UTF-8 Note: the SSL encryption can be enabled only if <Enable> parameter of #SSLEN is set to 0, <FTPSEn> parameter of #FTPCFG is set to 0 and <ssl_enabled> parameter of #HTTPCFG is set to 0. Note: values are automatically saved in NVM.
AT#SMTPCFG?	Read command returns the current settings in the format: **#SMTPCFG: <ssl_enabled>,<port>,<mode>,<charset>,0,0<CR><LF>**
AT#SMTPCFG=?	Test command returns the supported range of parameters **<ssl_enabled>, <port>, <mode>** and **<charset>** in the format: **#SMTPCFG: (list of supported <ssl_enabled>s),(list of supported <port>s),(list of supported <mode>s), (list of supported <charset>s) ,(0),(0)**

3.5.7.10.2. E-mail SMTP Server - #ESMTP

#ESMTP - E-mail SMTP Server	SELINT 0 / 1
AT#ESMTP [=<smtp>]	Set command sets the SMTP server address, used for E-mail sending. SMTP server can be specified as IP address or as nick name. Parameter: **<smtp>** - SMTP server address, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string "") Note: the max length for **<smtp>** is the output of Test command. Note: If parameter is omitted then the behaviour of Set command is the same of Read command
AT#ESMTP?	Read Command reports the current SMTP server address, in the format: **#ESMTP: <smtp>**
AT#ESMTP=?	Test command returns the max length for the parameter **<smtp>.**
Example	AT#ESMTP="smtp.mydomain.com" OK
Note	The SMTP server used shall be inside the APN space (the smtp server provided by the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.

#ESMTP - E-mail SMTP Server	SELINT 2
AT#ESMTP= [<smtp>]	Set command sets the SMTP server address, used for E-mail sending. SMTP server can be specified as IP address or as nick name. Parameter: **<smtp>** - SMTP server address, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: **<host name>** (factory default is the empty string "") Note: the max length for **<smtp>** is the output of Test command.
AT#ESMTP?	Read Command reports the current SMTP server address, in the format: **#ESMTP: <smtp>**
AT#ESMTP=?	Test command returns the max length for the parameter **<smtp>.**
Example	AT#ESMTP="smtp.mydomain.com" OK
Note	The SMTP server used shall be inside the APN space (the smtp server provided by the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.

3.5.7.10.3. E-mail Sender Address - #EADDR

#EADDR - E-mail Sender Address	SELINT 0 / 1
AT#EADDR [=<e-addr>]	Set command sets the sender address string to be used for sending the e-mail. Parameter: **<e-addr>** - sender address, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) Note: If parameter is omitted then the behaviour of Set command is the same of Read command
AT#EADDR?	Read command reports the current sender address, in the format: **#EADDR: <e-addr>**
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter **<e-addr>.**
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK

#EADDR - E-mail Sender Address	SELINT 2
AT#EADDR= [<e-add>]	Set command sets the sender address string to be used for sending the e-mail. Parameter: **<e-addr>** - sender address, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”)
AT#EADDR?	Read command reports the current sender address, in the format: **#EADDR: <e-addr>**
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter **<e-addr>.**
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK

3.5.7.10.4. E-mail Authentication User Name - #EUSER

#EUSER - E-mail Authentication User Name	SELINT 0 / 1
AT#EUSER [=<e-user>]	Set command sets the user identification string to be used during the authentication step of the SMTP. Parameter: **<e-user>** - e-mail authentication User ID, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) Note: if no authentication is required then the **<e-user>** parameter shall be empty "". Note: If parameter is omitted then the behaviour of Set command is the same of Read command
AT#EUSER?	Read command reports the current user identification string, in the format: **#EUSER: <e-user>**
AT#EUSER=?	Test command returns the maximum allowed length of the string parameter **<e-user>**.
Example	AT#EUSER="myE-Name" OK AT#EUSER? #EUSER: "myE-Name" OK
Note	It is a different user field than the one used for GPRS authentication (see **#USERID**).

#EUSER - E-mail Authentication User Name	SELINT 2
AT#EUSER= [<e-user>]	Set command sets the user identification string to be used during the authentication step of the SMTP. Parameter: **<e-user>** - e-mail authentication User ID, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) Note: if no authentication is required then the **<e-user>** parameter shall be empty "".
AT#EUSER?	Read command reports the current user identification string, in the format: **#EUSER: <e-user>**
AT#EUSER=?	Test command returns the maximum allowed length of the string parameter **<e-user>**.
Example	AT#EUSER="myE-Name" OK

#EUSER - E-mail Authentication User Name	SELINT 2
	AT#EUSER? #EUSER: "myE-Name" OK
Note	It is a different user field than the one used for GPRS authentication (see **#USERID**).

3.5.7.10.5. E-mail Authentication Password - #EPASSW

#EPASSW - E-mail Authentication Password	SELINT 0 / 1
AT#EPASSW= <e-pwd>	Set command sets the password string to be used during the authentication step of the SMTP. Parameter: **<e-pwd>** - e-mail authentication password, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) Note: if no authentication is required then the **<e-pwd>** parameter shall be empty "".
AT#EPASSW=?	Test command returns the maximum allowed length of the string parameter **<e-pwd>**.
Example	AT#USERID="myPassword" OK
Note	It is a different password field than the one used for GPRS authentication (see **#PASSW**).

#EPASSW - E-mail Authentication Password	SELINT 2
AT#EPASSW= [<e-pwd>]	Set command sets the password string to be used during the authentication step of the SMTP. Parameter: **<e-pwd>** - e-mail authentication password, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) Note: if no authentication is required then the **<e-pwd>** parameter shall be empty "".
AT#EPASSW=?	Test command returns the maximum allowed length of the string parameter **<e-pwd>**.
Example	AT#EPASSW="myPassword" OK
Note	It is a different password field than the one used for GPRS authentication (see **#PASSW**).

3.5.7.10.6. E-mail Sending With GPRS Context Activation - #SEMAIL

#SEMAIL - E-mail Sending With GPRS Context Activation	**SELINT 0 / 1**
AT#SEMAIL=<da>, <subj>	Execution command activates a GPRS context, if not previously activated by **#EMAILACT**, and sends an e-mail message. The GPRS context is deactivated when the e-mail is sent. Parameters: **<da>** - destination address, string type (maximum length 100 characters). **<subj>** - subject of the message, string type (maximum length 100 characters). The device responds to the command with the prompt '>' and awaits for the message body text. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). If e-mail message is successfully sent, then the response is **OK**. If message sending fails for some reason, an error code is reported. Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated. Note: Care must be taken to ensure that during the command execution, no other commands are issued. To avoid malfunctions is suggested to wait for the **OK** or **ERROR / +CMS ERROR:<err>** response before issuing further commands. Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body… this is the text of the mail message… CTRL-Z *..wait..* OK *Message has been sent.*
Note	This command is obsolete. It's suggested to use the couple **#EMAILACT** and **#EMAILD** instead of it.

#SEMAIL – E-mail Sending With GPRS Context Activation	**SELINT 2**
AT#SEMAIL=[<da>,<subj>]	Execution command activates a GPRS context, if not previously activated by #EMAILACT, and sends an e-mail message. The GPRS context is deactivated when the e-mail is sent.

	Parameters: **<da>** - destination address, string type. (maximum length 100 characters) **<subj>** - subject of the message, string type. (maximum length 200 characters) The device responds to the command with the prompt '>' and awaits for the message body text. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If e-mail message is successfully sent, then the response is OK. If message sending fails for some reason, an error code is reported. Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated. Note: Care must be taken to ensure that during the command execution, no other commands are issued. To avoid malfunctions is suggested to wait for the OK or ERROR / +CMS ERROR:<err> response before issuing further commands. Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost. Note: this command is not allowed if GSM context is active (see AT#SGACT=0,1).
AT#SEMAIL=?	Test command returns the **OK** result code.
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body… this is the text of the mail message… CTRL-Z ..wait.. OK Message has been sent.

3.5.7.10.7. E-mail GPRS Context Activation - #EMAILACT

#EMAILACT - E-mail GPRS Context Ativation	**SELINT 0 / 1**
AT#EMAILACT[=[<mode>]]	Execution command deactivates/activates the GPRS context, eventually proceeding with the authentication with the parameters given with **#PASSW** and **#USERID**. Parameter: **<mode>** - GPRS context activation mode

#EMAILACT - E-mail GPRS Context Ativation	SELINT 0 / 1
	0 - GPRS context deactivation request 1 - GPRS context activation request Note: issuing **AT#EMAILACT<CR>** reports the current status of the GPRS context for the e-mail, in the format: **#EMAILACT: <status>** where: **<status>** 0 - GPRS context deactivated 1 - GPRS context activated Note: issuing **AT#EMAILACT=<CR>** is the same as issuing the command **AT#EMAILACT=0<CR>**. Note: if you request a GPRS context deactivation during a call issuing either **AT#GPRS=0** or **AT#EMAILACT=0** and then, after the call termination, you want to request a GPRS context activation through **#EMAILACT**, you **need** to issue the following sequence of three commands AT#EMAILACT=1 OK AT#EMAILACT=0 OK AT#EMAILACT=1 OK
AT#EMAILACT?	Read command has the same effect of the Execution command **AT#EMAILACT<CR>**.
AT#EMAILACT=?	Test command returns the allowed values for parameter **<mode>**.
Example	AT#EMAILACT=1 OK *Now GPRS Context has been activated* AT# EMAILACT=0 OK *Now GPRS context has been deactivated.*
Note	It is strongly recommended to use the same command (e.g. **#EMAILACT**) to activate the context, deactivate it and interrogate about its status.

#EMAILACT - E-mail GPRS Context Ativation	SELINT 2
AT#EMAILACT=[<mode>]	Execution command deactivates/activates the **PDP context #1**, eventually proceeding with the authentication with the parameters given with **#PASSW** and **#USERID**. Parameter: **<mode>** - **PDP context** activation mode

#EMAILACT - E-mail GPRS Context Ativation	SELINT 2
	0 - GPRS context deactivation request 1 - GPRS context activation request Note: at least a **socket identifier** needs to be associated with **PDP context #1** in order to every **#EMAILACT** action be effective; by default the **PDP context #1** is associated with **socket identifiers 1**, **2** and **3**, but it is possible to modify these associations through **#SCFG**. Trying to issue a **#EMAILACT** action when **no socket identifier** is associated with **PDP context #1** raises an error. Note: if the **PDP context #1** has been activated issuing **AT#EMAILACT=1**, then • if you request to deactivate the **PDP context #1** issuing **AT#GPRS=0** DTE receives the final result code **OK** but nothing really happens • if you request to deactivate the **PDP context #1 during a call** issuing **AT#EMAILACT=0** and then, after the call termination, you want to activate the **PDP context #1** again through **#EMAILACT**, you **need** to issue the following sequence of three commands AT#EMAILACT=1 OK AT#EMAILACT=0 OK AT#EMAILACT=1 OK *(Analogous considerations if you want to request the activation of **PDP context #1** issuing **AT#GPRS=1**, see **#GPRS**)* Note: this command is not allowed if GSM context is active (see **AT#SGACT=0,1**).
AT#EMAILACT?	Read command reports the current status of the GPRS context for the e-mail, in the format: **#EMAILACT: <status>** where: **<status>** 0 - GPRS context deactivated 1 - GPRS context activated
AT#EMAILACT=?	Test command returns the allowed values for parameter **<mode>**.
Example	AT#EMAILACT=1 OK *Now GPRS Context has been activated* AT# EMAILACT=0 OK *Now GPRS context has been deactivated.*
Note	It is strongly recommended to use the same command (e.g. **#EMAILACT**) to

#EMAILACT - E-mail GPRS Context Ativation	SELINT 2
	activate the context, deactivate it and interrogate about its status.

3.5.7.10.8. E-mail Sending - #EMAILD

#EMAILD - E-mail Sending	SELINT 0 / 1
AT#EMAILD=<da>, <subj>	Execution command sends an e-mail message if GPRS context has already been activated by either **AT#EMAILACT=1** or **AT#GPRS=1**. Parameters: **<da>** - destination address, string type (maximum length 100 characters). **<subj>** - subject of the message, string type (maximum length 100 characters). The device responds to the command with the prompt '>' and awaits for the message body text. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). If e-mail message is successfully sent, then the response is **OK**. If message sending fails for some reason, an error code is reported. Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated. Note: Care must be taken to ensure that during the command execution, no other commands are issued. To avoid malfunctions is suggested to wait for the **OK** or **ERROR / +CMS ERROR:<err>** response before issuing further commands. Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.
Example	AT#EMAILD=”me@myaddress.com”,”subject of the mail” >message body… this is the text of the mail message… CTRL-Z *..wait..* OK *Message has been sent.*
Note	The only difference between this command and the **#SEMAIL** is that this command does not interact with the GPRS context status, leaving it **ON** or **OFF** according to the **#EMAILACT** setting, thus, when the connection made with **#EMAILD** is closed, the context status is maintained.

#EMAILD – E-mail Sending	SELINT 2
AT#EMAILD=[<da>,<subj>]	Execution command sends an e-mail message if GPRS context has already been activated by either **AT#SGACT=1,1** or **AT#EMAILACT=1** or

	AT#GPRS=1 It is also possible to send an e-mail on the GSM context, if it has already been activated by **AT#SGACT=0,1**. Parameters: **<da> -** destination address, string type. (maximum length 100 characters) **<subj> -** subject of the message, string type. (maximum length 200 characters) The device responds to the command with the prompt '>' and awaits for the message body text. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If e-mail message is successfully sent, then the response is OK. If message sending fails for some reason, an error code is reported. Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated. Note: Care must be taken to ensure that during the command execution, no other commands are issued. To avoid malfunctions is suggested to wait for the OK or ERROR / +CMS ERROR:<err> response before issuing further commands. Note: maximum length for message body is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2, 1500 bytes for versions starting from 10.0x.xx3, trying to send more data will cause the surplus to be discarded and lost.
AT#EMAILD=?	Test command returns the **OK** result code.
Example	AT#EMAILD="me@myaddress.com","subject of the mail" >message body… this is the text of the mail message… CTRL-Z ..wait.. OK Message has been sent.
Note	The only difference between this command (set using GPRS context) and the **#SEMAIL** is that this command does not interact with the GPRS context status, leaving it **ON** or **OFF** according to the **#EMAILACT (#SGACT**) setting, thus, when the connection made with **#EMAILD** is closed, the context status is maintained.

3.5.7.10.9. E-mail Parameters Save - #ESAV

#ESAV - E-mail Parameters Save	SELINT 0 / 1
AT#ESAV	Execution command stores the e-mail parameters in the NVM of the device. The e-mail parameters to store are: - E-mail User Name - E-mail Password - E-mail Sender Address - E-mail SMTP server
Note	If some parameters have not been previously specified then a default value will be taken.

#ESAV - E-mail Parameters Save	SELINT 2
AT#ESAV	Execution command stores the e-mail parameters in the NVM of the device. The e-mail parameters to store are: - E-mail User Name - E-mail Password - E-mail Sender Address - E-mail SMTP server
AT#ESAV=?	Test command returns the **OK** result code.
Note	If some parameters have not been previously specified then a default value will be taken.

3.5.7.10.10. E-mail Parameters Reset - #ERST

#ERST - E-mail Parameters Reset	SELINT 0 / 1
AT#ERST	Execution command resets the e-mail parameters to the "factory default" configuration and stores them in the NVM of the device. The e-mail parameters to reset are: - E-mail User Name - E-mail Password - E-mail Sender Address - E-mail SMTP server

#ERST - E-mail Parameters Reset	SELINT 2
AT#ERST	Execution command resets the e-mail parameters to the "factory default" configuration and stores them in the NVM of the device. The e-mail parameters to reset are: - E-mail User Name - E-mail Password - E-mail Sender Address - E-mail SMTP server
AT#ERST=?	Test command returns the **OK** result code.

3.5.7.10.11. SMTP Read Message - #EMAILMSG

#EMAILMSG - SMTP Read Message	SELINT 0 / 1
AT#EMAILMSG	Execution command returns the last response from SMTP server.
AT#EMAILMSG?	Read command has the same behaviour as Execution command.

#EMAILMSG - SMTP Read Message	SELINT 2
AT#EMAILMSG	Execution command returns the last response from SMTP server.
AT#EMAILMSG=?	Test command returns the **OK** result code.

3.5.7.10.12. Send mail with attachment - #SMTPCL

#SMTPCL – send mail with attachment	SELINT 2
AT#SMTPCL= <da>,<subj>,<att> [,<filename>,<encod>]	This command permits to send an email with different types of attachments if GPRS context has already been activated (#SGACT,#EMAILACT or #GPRS). After sending message body text (as with #EMAILD), the command switch to online mode if attachment has to be sent. While in online mode data received on the serial port are transmitted on the SMTP socket as MIME attachment. The escape sequence has to be sent to close the SMTP connection. Encoding of data received on the serial port is performed if required (binary data), before transmission on the SMTP socket. Parameters: <**da**> - destination address, string type. (maximum length 100 characters) <**subj**> - subject of the message, string type. (maximum length 200 characters) <**att**> - attached file flag 0 – no attachment 1 – attach a txt file 2 – attach a binary file(jpg,bin,pdf,...) <**filename**> - attached file name (maximum length 50 characters) <**encod**> -Content-Transfer-Encoding used for attachment 0 – "7bit" means data all represented as short lines of US-ASCII data 1 – "base64" designed to represent arbitrary sequences of octets in a form that need not be humanly readable Note: if no attachment (<**att**> 0) has to be sent, the behavior is the same as with #EMAILD. OK after CTRL-Z is returned(if connection was successful), the switch to

	online mode is not performed. Note: If a txt file (**<att>**=1) is attached, only **<encod>**0("7bit") is possible. If a binary file (**<att>**=2) is attached, only **<encod>**1("base64") is possible. Note: if **<att>**=0 and **<filename>** is present and not empty, the attachment won't be considered Note: if **<att>** 1 or 2 and **<filename>** is not present, command will return an ERROR Note: default SMTP port (25) is used
AT#SMTPCL=?	Test command reports the supported range of values for parameters **<da>,<subj>,<att>[,<filename>,<encod>]**
Examples	at#smtpcl="me@myaddress.com","test1",1,"sample.txt",0 >message body...this is the text of the mail message… Send CTRL-Z CONNECT …data received on the serial port are sent as attachment…. Send escape sequence to close the SMTP connection +++ NO CARRIER at#smtpcl="me@myaddress.com","test2",2,"image.jpg",1 >message body...this is the text of the mail message… Send CTRL-Z CONNECT …data received on the serial port are base64-encoded and sent as attachment… . Send escape sequence to close the SMTP connection +++ NO CARRIER

3.5.7.10.13. E-mail SMTP Port - #ESMTPPORT

#ESMTPPORT – E-mail SMTP Port	**SELINT 2**
AT#ESMTPPORT=<Port>	This command permits to set SMTP port Parameters: **<Port>** - SMTP port to contact (default 25)

	25..465,587 Note: SMTP protocol is used on the selected port Note: the value set by command is directly stored in NVM
AT#ESMTPPORT?	Read command reports the currently selected **<Port>** in the format: **#ESMTPPORT: <Port >**
AT#ESMTPPORT=?	Test command reports the supported range of values for parameter **< Port >**

3.5.7.10.14. E-mail sender name - #ENAME

#ENAME – E-mail sender name	**SELINT 2**
AT#ENAME=[<e-name>][,<charset>]	Set command sets the full name of the e-mail sender that will be displayed by the receiver in place of the sender e-mail address. Parameter: **<e-name>** - sender name, string type. - any string value up to max length reported in the Test command. (factory default is the empty string “”) **<charset>** - Numeric parameter indicating the character encoding used in <e-name> parameter 0 - US-ASCII (default) 1 - UTF-8 Note: do not use the SPACE character. In place of it, use UNDERSCORE (“_”), but only if <charset> is 0.
AT#ENAME?	Read command returns the current setting in the format: **#ENAME**: **<e-name>,<charset><CR><LF>**
AT#ENAME=?	Test command returns the maximum allowed length of the string parameter **<e-name>** and the range of values accepted by parameter <charset>

3.5.7.11. Easy Scan® Extension AT Commands

NOTE:

it is strongly suggested to issue all the Easy Scan® Extension AT commands with **NO SIM** inserted, to avoid a potential conflict with normal module operations, such as "incoming call", "periodic location update, "periodic routing area update" and so on.

3.5.7.11.1. Network Survey - #CSURV

#CSURV - Network Survey	**SELINT 0 / 1**
AT#CSURV [=<s>,<e>] **AT*CSURV [=<s>,<e>]** *(both syntax are possible)*	Execution command allows to perform a quick survey through band channels, starting from channel **<s>** to channel **<e>**. If parameters are omitted, a full band scan is performed. Parameters: **<s>** - starting channel **<e>** - ending channel After issuing the command the device responds with the string: **Network survey started…** and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format: **(For BCCH-Carrier)** **arfcn: <arfcn> bsic: <bsic> rxLev: <rxLev> ber: <ber> mcc: <mcc> mnc: <mnc> lac: <lac> cellId: <cellId> cellStatus: <cellStatus> numArfcn: <numArfcn> arfcn: [<arfcn1> ..[<arfcn64>]] [numChannels: <numChannels> array: [<ba1> ..[<ba32>]] [pbcch: <pbcch> [nom: <nom> rac: <rac> spgc: <spgc> pat: <pat> nco: <nco> t3168: <t3168> t3192: <t3192> drxmax: <drxmax> ctrlAck: <ctrlAck> bsCVmax: <bsCVmax> alpha: <alpha> pcMeasCh: <pcMeasCh>]]]** **<CR><LF><CR><LF><CR><LF>** where: **<arfcn>** - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel) **<bsic>** - base station identification code **<rxLev>** - receiption level (in dBm) **<ber>** - bit error rate (in %) **<mcc>** - mobile country code **<mnc>** - mobile network code **<lac>** - location area code **<cellId>** - cell identifier **<cellStatus>** - cell status

#CSURV - Network Survey	SELINT 0 / 1

..CELL_SUITABLE - C0 is a suitable cell.
CELL_LOW_PRIORITY - the cell is low priority based on the received system information.
CELL_FORBIDDEN - the cell is forbidden.
CELL_BARRED - the cell is barred based on the received system information.
CELL_LOW_LEVEL - the cell **<rxLev>** is low.
CELL_OTHER - none of the above e.g. exclusion timer running, no BCCH available…etc.

<numArfcn> - number of valid channels in the Cell Channel Description

<arfcn*n*> - arfcn of a valid channel in the Cell Channel Description (*n* is in the range **1..<numArfcn>**)

<numChannels> - number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last **#CSURVEXT** setting:

1. if **#CSURVEXT=0** this information is displayed only for serving cell
2. if **#CSURVEXT=1** or **2** this information is displayed also for every valid scanned BCCH carrier.

<ba*n*> - arfcn of a valid channel in the BA list (***n*** is in the range **1..<numChannels>**); the output of this information for non-serving cells depends on last **#CSURVEXT** setting:

1. if **#CSURVEXT=0** this information is displayed only for serving cell
2. if **#CSURVEXT=1** or **2** this information is displayed also for every valid scanned BCCH carrier.

(The following informations will be printed only if GPRS is supported in the cell)

<pbcch> - packet broadcast control channel
0 - pbcch not activated on the cell
1 - pbcch activated on the cell

<nom> - network operation mode
1
2
3

<rac> - routing area code
0..255 -

<spgc> - SPLIT_PG_CYCLE support
..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell
..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell

<pat> - priority access threshold
0 -
3..6 -

<nco> - network control order
0..2 -

<t3168> - timer 3168

<t3192> - timer 3192

<drxmax> - discontinuous reception max time (in seconds)

#CSURV - Network Survey	SELINT 0 / 1
	<ctrlAck> - packed control ack **<bsCVmax>** - blocked sequenc countdown max value **<alpha>** - alpha parameter for power control **<pcMeasCh>** - type of channel which shall be used for downlink measurements for power control 0 - BCCH 1 - PDCH **(For non BCCH-Carrier)** **arfcn: <arfcn> rxLev: <rxLev>** where: **<arfcn>** - RF channel **<rxLev>** - receiption level (in dBm) Lastly, the **#CSURV** output ends in two ways, depending on the last **#CSURVF** setting: if **#CSURVF=0** or **#CSURVF=1** The output ends with the string: **Network survey ended** if **#CSURVF=2** the output ends with the string: **Network survey ended (Carrier: <NoARFCN> BCCh: <NoBCCh>)** where **<NoARFCN>** - number of scanned frequencies **<NoBCCH>** - number of found BCCh
AT#CSURV? **AT*CSURV?**	Read command has the same behaviour as Execution command with parameters omitted.
Example	AT#CSURV Network survey started… arfcn: 48 bsic: 24 rxLev: -52 ber: 0.00 mcc: 610 mnc: 1 lac: 33281 cellId: 3648 cellStatus: CELL_SUITABLE numArfcn: 2 arfcn: 30 48 numChannels: 5 array: 14 19 22 48 82 arfcn: 14 rxLev: 8 Network survey ended

#CSURV - Network Survey	SELINT 0 / 1
	OK
Note	The command is executed within max. 2 minutes.

#CSURV - Network Survey	SELINT 2
AT#CSURV[= [<s>,<e>]] **AT*CSURV[= [<s>,<e>]]** *(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)*	Execution command allows to perform a quick survey through band channels, starting from channel **<s>** to channel **<e>**. Issuing **AT#CSURV<CR>**, a full band scan is performed. Parameters: **<s>** - starting channel **<e>** - ending channel After issuing the command the device responds with the string: **Network survey started…** and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format: **(For BCCH-Carrier)** **arfcn: <arfcn> bsic: <bsic> rxLev: <rxLev> ber: <ber> mcc: <mcc> mnc: <mnc> lac: <lac> cellId: <cellId> cellStatus: <cellStatus> numArfcn: <numArfcn> arfcn: [<arfcn1> ..[<arfcn64>]] [numChannels: <numChannels> array: [<ba1> ..[<ba32>]] [pbcch: <pbcch> [nom: <nom> rac: <rac> spgc: <spgc> pat: <pat> nco: <nco> t3168: <t3168> t3192: <t3192> drxmax: <drxmax> ctrlAck: <ctrlAck> bsCVmax: <bsCVmax> alpha: <alpha> pcMeasCh: <pcMeasCh>]]] mstxpwr: <mstxpwr> rxaccmin: <rxaccmin> croffset: <croffset> penaltyt: <penaltyt> t3212: <t3212> CRH: <CRH>** **<CR><LF><CR><LF><CR><LF>** where: **<arfcn>** - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel) **<bsic>** - base station identification code; if **#CSURVF** last setting is 0, **<bsic>** is a decimal number, else it is **at the most** a 2-digits octal number **<rxLev>** - decimal number; it is the receiption level (in dBm) **<ber>** - decimal number; it is the bit error rate (in %) **<mcc>** - hexadecimal 3-digits number; it is the mobile country code **<mnc>** - hexadecimal 2-digits number; it is the mobile network code **<lac>** - location area code; if **#CSURVF** last setting is 0, **<lac>** is a decimal number, else it is a 4-digits hexadecimal number **<cellId>** - cell identifier; if **#CSURVF** last setting is 0, **<cellId>** is a decimal number, else it is a 4-digits hexadecimal number **<cellStatus>** - string type; it is the cell status ..CELL_SUITABLE - C0 is a suitable cell. CELL_LOW_PRIORITY - the cell is low priority based on the received system

#CSURV - Network Survey	SELINT 2

information.
CELL_FORBIDDEN - the cell is forbidden.
CELL_BARRED - the cell is barred based on the received system information.
CELL_LOW_LEVEL - the cell **<rxLev>** is low.
CELL_OTHER - none of the above e.g. exclusion timer running, no BCCH available…etc.

<numArfcn> - decimal number; it is the number of valid channels in the Cell Channel Description

<arfcn*n*> - decimal number; it is the arfcn of a valid channel in the Cell Channel Description (*n* is in the range **1..<numArfcn>**)

<numChannels> - decimal number; it is the number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last **#CSURVEXT** setting:

2. if **#CSURVEXT=0** this information is displayed only for serving cell
3. if **#CSURVEXT=1, 2** or **3** this information is displayed also for every valid scanned BCCH carrier.

<ba*n*> - decimal number; it is the arfcn of a valid channel in the BA list (***n*** is in the range **1..<numChannels>**); the output of this information for non-serving cells depends on last **#CSURVEXT** setting:

2. if **#CSURVEXT=0** this information is displayed only for serving cell
3. if **#CSURVEXT=1** or **2** this information is displayed also for every valid scanned BCCH carrier.

(The following informations will be printed only if GPRS is supported in the cell)

	arfcn: 14 rxLev: 8 Network survey ended OK
Note	The command is executed within max. 2 minute.

3.5.7.11.2. Network Survey - #CSURVC

#CSURVC - Network Survey (Numeric Format)	SELINT 0 / 1
AT#CSURVC [=<s>,<e>] **AT*CSURVC [=<s>,<e>]** *(both syntax are possible)*	Execution command allows to perform a quick survey through band channels, starting from channel **<s>** to channel **<e>**. If parameters are omitted, a full band scan is performed. Parameters: **<s>** - starting channel **<e>** - ending channel After issuing the command the device responds with the string: **Network survey started…** and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format: **(For BCCH-Carrier)** **<arfcn>,<bsic>,<rxLev>,<ber>,<mcc>,<mnc>,<lac>,<cellId>,** **<cellStatus>,<numArfcn>[,<arfcn1> ..[<arfcn64>]]** **[,<numChannels>[,<ba1> ..[<ba32>]][,<pbcch> [,<nom>,<rac>,<spgc>,** **<pat>,<nco>,<t3168>,<t3192>,<drxmax>,<ctrlAck>,<bsCVmax>,** **<alpha>,<pcMeasCh>]]]** **<CR><LF><CR><LF><CR><LF>** where: **<arfcn>** - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel) **<bsic>** - base station identification code **<rxLev>** - receiption level (in dBm) **<ber>** - bit error rate (in %) **<mcc>** - mobile country code **<mnc>** - mobile network code **<lac>** - location area code **<cellId>** - cell identifier **<cellStatus>** - cell status ..0 - C0 is a suitable cell (CELL_SUITABLE). 1 - the cell is low priority based on the received system information (CELL_LOW_PRIORITY).

#CSURVC - Network Survey (Numeric Format)	SELINT 0 / 1

2 - the cell is forbidden (CELL_FORBIDDEN).
3 - the cell is barred based on the received system information (CELL_BARRED).
4 - the cell **<rxLev>** is low (CELL_LOW_LEVEL).
5 - none of the above e.g. exclusion timer running, no BCCH available…etc.. (CELL_OTHER).

<numArfcn> - number of valid channels in the Cell Channel Description

<arfcn*n*> - arfcn of a valid channel in the Cell Channel Description (*n* is in the range **1..<numArfcn>**)

<numChannels> - number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last **#CSURVEXT** setting:
1. if **#CSURVEXT=0** this information is displayed only for serving cell
2. if **#CSURVEXT=1 or 2** this information is displayed also for every valid scanned BCCH carrier.

<ba*n*> - arfcn of a valid channel in the BA list (***n*** is in the range **1..<numChannels>**); the output of this information for non-serving cells depends on last **#CSURVEXT** setting:
1. if **#CSURVEXT=0** this information is displayed only for serving cell
2. if **#CSURVEXT=1 or 2** this information is displayed also for every valid scanned BCCH carrier.

(The following informations will be printed only if GPRS is supported in the cell)

<pbcch> - packet broadcast control channel
0 - pbcch not activated on the cell
1 - pbcch activated on the cell

<nom> - network operation mode
1
2
3

<rac> - routing area code
0..255 -

<spgc> - SPLIT_PG_CYCLE support
..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell
..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell

<pat> - priority access threshold
0 -
3..6 -

<nco> - network control order
0..2 -

<t3168> - timer 3168

<t3192> - timer 3192

<drxmax> - discontinuous reception max time (in seconds)

<ctrlAck> - packed control ack

<bsCVmax> - blocked sequenc countdown max value

<alpha> - alpha parameter for power control

#CSURVC - Network Survey (Numeric Format)	SELINT 0 / 1
	<pcMeasCh> - type of channel which shall be used for downlink measurements for power control 0 - BCCH 1 - PDCH **(For non BCCH-Carrier)** **<arfcn>,<rxLev>** where: **<arfcn>** - RF channel **<rxLev>** - receiption level (in dBm) The output ends with the string: **Network survey ended**
AT#CSURVC? **AT*CSURVC?**	Read command has the same behaviour as the Execution command with parameters omitted
Example	AT#CSURVC Network survey started… 48,24,-52,0.00,610,1,33281,3648,0,2,30 48,5,14 19 22 48 82 14,8 Network survey ended OK
Note	The command is executed within max. 2 minute. The information provided by **#CSURVC** is the same as that provided by **#CSURV**. The difference is that the output of **#CSURVC** is in numeric format only.

#CSURVC - Network Survey (Numeric Format)	SELINT 2
AT#CSURVC[= [<s>,<e>]] **AT*CSURVC[= [=<s>,<e>]]** *(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future*	Execution command allows to perform a quick survey through band channels, starting from channel **<s>** to channel **<e>**. Issuing **AT#CSURVC<CR>**, a full band scan is performed. Parameters: **<s>** - starting channel **<e>** - ending channel After issuing the command the device responds with the string: **Network survey started…**

#CSURVC - Network Survey (Numeric Format)	SELINT 2
versions)	and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format: **(For BCCH-Carrier)** **<arfcn>,<bsic>,<rxLev>,<ber>,<mcc>,<mnc>,<lac>,<cellId>,** **<cellStatus>,<numArfcn>[,<arfcn1> ..[<arfcn64>]]** **[,<numChannels>[,<ba1> ..[<ba32>]][,<pbcch> [,<nom>,<rac>,<spgc>,** **<pat>,<nco>,<t3168>,<t3192>,<drxmax>,<ctrlAck>,<bsCVmax>,** **<alpha>,<pcMeasCh>]]],<mstxpwr>,<rxaccmin>,<croffset>,<penaltyt>,<t3212>,<CRH>** **<CR><LF><CR><LF><CR><LF>** where: **<arfcn>** - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel) **<bsic>** - base station identification code; if **#CSURVF** last setting is 0, **<bsic>** is a decimal number, else it is **at the most** a 2-digits octal number **<rxLev>** - decimal number; it is the receiption level (in dBm) **<ber>** - decimal number; it is the bit error rate (in %) **<mcc>** - hexadecimal 3-digits number; it is the mobile country code **<mnc>** - hexadecimal 2-digits number; it is the mobile network code **<lac>** - location area code; if **#CSURVF** last setting is 0, **<lac>** is a decimal number, else it is a 4-digits hexadecimal number **<cellId>** - cell identifier; if **#CSURVF** last setting is 0, **<cellId>** is a decimal number, else it is a 4-digits hexadecimal number **<cellStatus>** - string type; it is the cell status ..0 - C0 is a suitable cell (CELL_SUITABLE). 1 - the cell is low priority based on the received system information (CELL_LOW_PRIORITY). 2 - the cell is forbidden (CELL_FORBIDDEN). 3 - the cell is barred based on the received system information (CELL_BARRED). 4 - the cell **<rxLev>** is low (CELL_LOW_LEVEL). 5 - none of the above e.g. exclusion timer running, no BCCH available…etc.. (CELL_OTHER). **<numArfcn>** - decimal number; it is the number of valid channels in the Cell Channel Description **<arfcn*n*>** - decimal number; it is the arfcn of a valid channel in the Cell Channel Description (*n* is in the range **1..<numArfcn>**) **<numChannels>** - decimal number; it is the number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last **#CSURVEXT** setting: 1. if **#CSURVEXT=0** this information is displayed only for serving cell 2. if **#CSURVEXT=1, 2 or 3** this information is displayed also for every valid scanned BCCH carrier. **<ba*n*>** - decimal number; it is the arfcn of a valid channel in the BA list (***n*** is in the range **1..<numChannels>**); the output of this information for non-

#CSURVC - Network Survey (Numeric Format)	SELINT 2

serving cells depends on last **#CSURVEXT** setting:

1. if **#CSURVEXT=0** this information is displayed only for serving cell
2. if **#CSURVEXT=1, 2 or 3** this information is displayed also for every valid scanned BCCH carrier.

(The following informations will be printed only if GPRS is supported in the cell)

<pbcch> - packet broadcast control channel
0 - pbcch not activated on the cell
1 - pbcch activated on the cell

<nom> - network operation mode
1
2
3

<rac> - routing area code
0..255 -

<spgc> - SPLIT_PG_CYCLE support
..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell
..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell

<pat> - priority access threshold
0 -
3..6 -

<nco> - network control order
0..2 -

<t3168> - timer 3168

<t3192> - timer 3192

<drxmax> - discontinuous reception max time (in seconds)

<ctrlAck> - packed control ack

<bsCVmax> - blocked sequenc countdown max value

<alpha> - alpha parameter for power control

<pcMeasCh> - type of channel which shall be used for downlink measurements for power control
0 - BCCH
1 - PDCH

(The following informations will be printed only for #CSURVEXT=3 setting)

<mstxpwr> - decimal TX power level
<rxaccmin> - decimal RX level access min, range 0 - 63
<croffset> - decimal Cell Reselection Offset, range 0 - 63
<penaltyt> - decimal Penalty Time, range 0 - 31
<t3212> - decimal T3212 Periodic Location Update Timer
<CRH> - decimal Cell Reselection Offset

(For non BCCH-Carrier)

<arfcn>,<rxLev>

#CSURVC - Network Survey (Numeric Format)	SELINT 2
	where: **<arfcn>** - decimal number; it is the RF channel **<rxLev>** - decimal number; it is the receiption level (in dBm) The last information from **#CSURVC** depends on the last **#CSURVF** setting: **#CSURVF=0** or **#CSURVF=1** The output ends with the string: **Network survey ended** **#CSURVF=2** the output ends with the string: **Network survey ended (Carrier: <NoARFCN> BCCh: <NoBCCh>)** where **<NoARFCN>** - number of scanned frequencies **<NoBCCH>** - number of found BCCh
Example	AT#CSURVC Network survey started… 48,24,-52,0.00,610,1,33281,3648,0,2,30 48,5,14 19 22 48 82,5,4,4,6,,2,7 14,8 Network survey ended OK
Note	The command is executed within max. 2 minute. The information provided by **#CSURVC** is the same as that provided by **#CSURV**. The difference is that the output of **#CSURVC** is in numeric format only.

3.5.7.11.3. Network Survey - #CSURVU

#CSURVU - Network Survey Of User Defined Channels	SELINT 0 / 1
AT#CSURVU=[<ch1>[,<ch2>[,… [,<ch*n*>]]]] **AT*CSURVU=[<ch1>[,<ch2>[,… [,<ch*n*>]]]]** *(both syntax are possible)*	Execution command allows to perform a quick survey through the given channels. The result format is like command **#CSURV**. Parameters: **<ch*n*>** - channel number (arfcn) Note: issuing **AT#CSURVU=<CR>** is the same as issuing the command **AT#CSURVU=0<CR>**.
Example	AT#CSURVU=59,110

#CSURVU - Network Survey Of User Defined Channels	SELINT 0 / 1
	Network survey started… arfcn: 59 bsic: 16 rxLev: -76 ber: 0.00 mcc: 546 mnc: 1 lac: 54717 cellId: 21093 cellStatus: CELL_SUITABLE numArfcn 2 arfcn: 36 59 arfcn: 110 rxLev: -107 Network survey ended OK
Note	The command is executed within max. 2 minute.

#CSURVU - Network Survey Of User Defined Channels	SELINT 2
AT#CSURVU=[<ch1>[,<ch2>[,… [,<ch*n*>]]]] **AT*CSURVU=[<ch1>[,<ch2>[,… [,<ch*n*>]]]]** *(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)*	Execution command allows to perform a quick survey through the given channels. The result format is like command **#CSURV**. Parameters: **<ch*n*>** - channel number (arfcn) Note: the maximum number of channels is 20.
Example	AT#CSURVU=59,110 Network survey started… arfcn: 59 bsic: 16 rxLev: -76 ber: 0.00 mcc: 546 mnc: 1 lac: 54717 cellId: 21093 cellStatus: CELL_SUITABLE numArfcn 2 arfcn: 36 59 arfcn: 110 rxLev: -107 Network survey ended OK
Note	The command is executed within max. 2 minute.

3.5.7.11.4. Network Survey - #CSURVUC

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)	SELINT 0 / 1
AT#CSURVUC=[<ch1>[,<ch2>[,… [,<ch*n*>]]]]	Execution command allows to perform a quick survey through the given channels. The result format is like command **#CSURVC**.

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)	SELINT 0 / 1
AT*CSURVUC=[<ch1>[,<ch2>[,… [,<ch*n*>]]]] *(both syntax are possible)*	Parameters: **<ch*n*>** - channel number (arfcn) Note: issuing **AT#CSURVUC=<CR>** is the same as issuing the command **AT#CSURVUC=0<CR>**.
Example	AT#CSURVUC=59,110 Network survey started… 59,16,-76,0.00,546,1,54717,21093,0,2,36 59 110,-107 Network survey ended OK
Note	The command is executed within max. 2 minute. The information provided by **#CSURVUC** is the same as that provided by **#CSURVU**. The difference is that the output of **#CSURVUC** is in numeric format only.

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)	SELINT 2
AT#CSURVUC=[<ch1>[,<ch2>[,… [,<ch*n*>]]]] **AT*CSURVUC=[<ch1>[,<ch2>[,… [,<ch*n*>]]]]** *(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)*	Execution command allows to perform a quick survey through the given channels. The result format is like command **#CSURVC**. Parameters: **<ch*n*>** - channel number (arfcn) Note: the maximum number of channels is 20.
Example	AT#CSURVUC=59,110 Network survey started… 59,16,-76,0.00,546,1,54717,21093,0,2,36 59,5,4,4,6,,2,7 110,-107 Network survey ended

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)	SELINT 2
	OK
Note	The command is executed within max. 2 minute. The information provided by **#CSURVUC** is the same as that provided by **#CSURVU**. The difference is that the output of **#CSURVUC** is in numeric format only.

3.5.7.11.5. BCCH Network Survey - #CSURVB

#CSURVB - BCCH Network Survey	SELINT 0 / 1
AT#CSURVB=<n>	Execution command performs a quick network survey through **M** (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as **<n>** BCCH carriers are found. The result format is like command **#CSURV**. Parameter: **<n>** - number of desired BCCH carriers 1..M
AT#CSURVB=?	Test command reports the range of values for parameter **<n>** in the format: **(1-M)** where **M** is the maximum number of available frequencies depending on last selected band.

#CSURVB - BCCH Network Survey	SELINT 2
AT#CSURVB=[<n>]	Execution command performs a quick network survey through **M** (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as **<n>** BCCH carriers are found. The result format is like command **#CSURV**. Parameter: **<n>** - number of desired BCCH carriers 1..M
AT#CSURVB=?	Test command reports the range of values for parameter **<n>** in the format: **(1-M)** where **M** is the maximum number of available frequencies depending on last selected band.

3.5.7.11.6. BCCH Network Survey - #CSURVBC

#CSURVBC - BCCH Network Survey (Numeric Format)	SELINT 0 / 1
AT#CSURVBC=<n>	Execution command performs a quick network survey through **M** (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as **<n>** BCCH carriers are found. The result is given in numeric format and is like command **#CSURVC**. Parameter: **<n>** - number of desired BCCH carriers 1..M
AT#CSURVBC=?	Test command reports the range of values for parameter **<n>** in the format: **(1-M)** where **M** is the maximum number of available frequencies depending on last selected band.

#CSURVBC - BCCH Network Survey (Numeric Format)	SELINT 2
AT#CSURVBC=[<n>]	Execution command performs a quick network survey through **M** (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as **<n>** BCCH carriers are found. The result is given in numeric format and is like command **#CSURVC**. Parameter: **<n>** - number of desired BCCH carriers 1..M
AT#CSURVBC=?	Test command reports the range of values for parameter **<n>** in the format: **(1-M)** where **M** is the maximum number of available frequencies depending on last selected band.

3.5.7.11.7. Network Survey Format - #CSURVF

#CSURVF - Network Survey Format	SELINT 0 / 1
AT#CSURVF[=[<format>]]	Set command controls the format of the numbers output by all the Easy Scan® Parameter: **<format>** - numbers format 0 - Decimal 1 - Hexadecimal values, no text 2 - Hexadecimal values with text

#CSURVF - Network Survey Format	SELINT 0 / 1
	Note: issuing **AT#CSURVF<CR>** is the same as issuing the Read command. Note: issuing **AT#CSURVF=<CR>** is the same as issuing the command **AT#CSURVF=0<CR>**.
AT#CSURVF?	Read command reports the current number format, as follows: **<format>**
AT#CSURVF=?	Test command reports the supported range of values for the parameter **<format>**.

#CSURVF - Network Survey Format	SELINT 2
AT#CSURVF=[<format>]	Set command controls the format of the numbers output by all the Easy Scan® Parameter: **<format>** - numbers format 0 - Decimal 1 - Hexadecimal values, no text 2 - Hexadecimal values with text
AT#CSURVF?	Read command reports the current number format, as follows: **<format>**
AT#CSURVF=?	Test command reports the supported range of values for the parameter **<format>**.

3.5.7.11.8. <CR><LF> Removing On Easy Scan® Commands Family - #CSURVNLF

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family	SELINT 0 / 1
AT#CSURVNLF[=<value>]	Set command enables/disables the automatic **<CR><LF>** removing from each information text line. Parameter: **<value>** 0 - disables **<CR><LF>** removing; they'll be present in the information text (factory default) 1 - remove **<CR><LF>** from information text Note: if parameter is omitted the behaviour of Set command is the same as Read command.
AT#CSURVNLF?	Read command reports whether automatic **<CR><LF>** removing is currently enabled or not, in the format: **<value>**
AT#CSURVNLF=?	Test command reports the range of values for parameter **<value>.**

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family	SELINT 2
AT#CSURVNLF=[<value>]	Set command enables/disables the automatic **<CR><LF>** removing from each information text line.

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family	SELINT 2
	Parameter: **<value>** 0 - disables **<CR><LF>** removing; they'll be present in the information text (factory default) 1 - remove **<CR><LF>** from information text
AT#CSURVNLF?	Read command reports whether automatic **<CR><LF>** removing is currently enabled or not, in the format: **<value>**
AT#CSURVNLF=?	Test command reports the range of values for parameter **<value>.**

3.5.7.11.9. Extended Network Survey - #CSURVEXT

#CSURVEXT - Extended Network Survey	SELINT 0 / 1
AT#CSURVEXT [=<value>]	Set command enables/disables extended network survey. Parameter: **<value>** 0 - disables extended network survey (factory default) 1 - enables extended network survey; all the network survey execution commands (**#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC**) display the BAList for every valid scanned BCCh carrier 2 - enables extended network survey; all the network survey execution commands (**#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC**) display the BAList for every valid scanned BCCh carrier and, if GPRS is supported in the cell, they report some GPRS informations carried by the System Information 13 of the BCCh Note: if parameter is omitted the behaviour of Set command is the same as Read command.
AT#CSURVEXT?	Read command reports whether extended network survey is currently enabled or not, in the format: **<value>**
AT#CSURVEXT=?	Test command reports the range of values for parameter **<value>.**

#CSURVEXT - Extended Network Survey	SELINT 2
AT#CSURVEXT [=<value>]	Set command enables/disables extended network survey. Parameter: **<value>** 0 - disables extended network survey (factory default) 1 - enables extended network survey; all the network survey execution commands (**#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC**) display the BAList for every valid scanned BCCh carrier 2 - enables extended network survey; all the network survey execution commands (**#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC**) display the BAList for every valid scanned BCCh carrier and, if GPRS is supported in the cell, they report some GPRS informations carried by the System Information 13 of the BCCh 3 - enables more extended network survey**;** all the network survey execution commands (**#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC**). It displays transmit power level, receiving level access min, Cell Reselection Offset, Penalty Time, T3212 Periodic Location Update Timer and Cell Reselection Offset
AT#CSURVEXT?	Read command reports whether extended network survey is currently enabled or not, in the format: **<value>**
AT#CSURVEXT=?	Test command reports the range of values for parameter **<value>.**

3.5.7.11.10. PLMN Network Survey - #CSURVP

#CSURVP - PLMN Network Survey	SELINT 2
AT#CSURVP=<plmn>	Execution command performs a quick network survey through channels. The survey stops as soon as a BCCH carriers belonging to the selected PLMN is found. The result format is like command **#CSURV**. Parameter: **<plmn>** - the desired PLMN in numeric format
AT#CSURVP=?	Test command returns OK

3.5.7.11.11. PLMN Network Survey (Numeric Format) - #CSURVPC

#CSURVPC - PLMN Network Survey (Numeric Format)	SELINT 2
AT#CSURVPC= <plmn>	Execution command performs a quick network survey through channels. The survey stops as soon as a BCCH carriers belonging to the selected PLMN is found. The result is given in numeric format and is like command **#CSURVC**.

#CSURVPC - PLMN Network Survey (Numeric Format)	SELINT 2
	Parameter: <**plmn**> - the desired PLMN in numeric format
AT#CSURVPC=?	Test command returns OK

3.5.7.11.12. Network Survey Of Timing Advance - #CSURVTA

#CSURVTA – Network Survey Of Timing Advance	SELINT 2
AT#CSURVTA=<ch1>,[<ch2>,[,...[,<ch*n*>]]]	Execution command allows to perform a quick survey of timing advance through the given channels or through top 6 neighbour cells. Parameters: <**ch*n***> - channel number (arfcn) or 1024 If <**ch1**> is different than 1024. After issuing the command the device responds with the string: **Network survey started…** and, after a while, a list of timing advance values, one for each received carrier, is reported, each of them in the format: **arfcn: <arfcn> TA: <TAValue><CR><LF><CR><LF><CR><LF>** where: <**arfcn**> - decimal number; it is the RF channel <**TAValue**> - decimal number; it is the timing advance value in bit periods (1 bit period = 48/13 µs); the range of this value is 0-63; this value is -1 if time advance measurement fails Lastly, the **#CSURVTA** output ends in two ways, depending on the last **#CSURVF** setting: if **#CSURVF=0** or **#CSURVF=1** The output ends with the string: **Network survey ended** if **#CSURVF=2** the output ends with the string: **Network survey ended (Carrier: <NoARFCN> BCCh: 0)** where <**NoARFCN**> - number of scanned frequencies

	Note: the maximum number of channels is 20. Note: during the execution of this command calls and sms, either incoming or outgoing, are not supported. Note: after the end of this command it is strongly suggested to wait at least 5 seconds before sending other AT commands. Note: this command can only be executed when mobile is in idle state. Note: it is possible to measure timing advance of cells that do not belong to current selected PLMN or current neighbour cell list. Note: if serving cell timing advance is needed, it is strongly suggested to measure its timing advance with this command, adding serving cell ARFCN to the list, in order to have even measures. Note: the command may be aborted and return ERROR in case of higher priority protocol stack event. Note: AT#CSURVNLF configuration affects this command behaviour. Note: AT#CSURVEXT configuration does not affect this command behaviour. If there is only one parameter and **<ch1>** is equal to 1024. After issuing the command the device responds with the string **ARFCN dBm MCC MNC LAC cell TA<CR><LF>** followed by the list of top 6 neighbour ARFCN parameters, including timing advance, in the format: **<arfcn> <dBm> <mcc> <mnc> <lac> <id> <TAValue><CR><LF>** where: **<arfcn>** - decimal number; it is the RF channel **<dBm>** - decimal number; it is received signal strength in dBm **<mcc>** - hexadecimal number; it is mobile country code **<mnc>** - hexadecimal number; it is mobile network code **<lac>** - hexadecimal number; it is location area code **<id>** - hexadecimal number; it is cell id **<TAValue>** - decimal number; it is the timing advance value in bit periods (1 bit period = 48/13 µs); the range of this value is 0-63; this value is -1 if time advance measurement fails

AT#CSURVTA=?	Test command response is OK.
Example	AT#CSURVTA=9,7,4 Network survey started ... arfcn: 9 TA: 2 arfcn: 7 TA: 11 arfcn: 4 TA: 2 Network survey ended OK AT#CSURVTA=1024 ARFCN dBm MCC MNC LAC cell TA 1004 -75 222 01 D5BD 5265 0 25 -81 222 01 D5BD 520F 11 15 -91 222 01 D5BD 5251 7 19 -93 222 01 D5BD 5219 12 12 -96 222 01 D5BD 5266 1 OK

3.5.7.12. SIM Toolkit AT Commands

3.5.7.12.1. SIM Tookit Interface Activation - #STIA

#STIA - SIM Toolkit Interface Activation	**SELINT 2**
AT#STIA= **[<mode>** **[,<timeout>]]**	Set command is used to activate the SAT sending of unsolicited indications when a **proactive command** is received from SIM. Parameters: **<mode>** 0 - disable SAT (default for all products, except GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL868-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 1 - enable SAT without unsolicited indication **#STN** (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL868-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 2 - enable SAT and extended unsolicited indication **#STN** (see **#STGI**) 3 - enable SAT and reduced unsolicited indication **#STN** (see **#STGI**) 17 - enable SAT without unsolicited indication #STN and 3GPP TS 23.038 alphabet used 18 - enable SAT and extended unsolicited indication #STN (see #STGI) and 3GPP TS 23.038 alphabet used 19 - enable SAT and reduced unsolicited indication #STN (see #STGI)and 3GPP TS 23.038 alphabet used 33 - enable SAT without unsolicited indication #STN and UCS2 alphabet used 34 - enable SAT and extended unsolicited indication #STN (see #STGI)and UCS2 alphabet used 35 - enable SAT and reduced unsolicited indication #STN (see #STGI)and UCS2 alphabet used **<timeout>** - time-out for user responses 1..255 - time-out in minutes (default 10). Any ongoing (but unanswered) **proactive command** will be aborted automatically after **<timeout>** minutes. In this case, the terminal response is either “ME currently unable to process command”, or if applicable, “No response from user”. In addition an unsolicited indication will be sent to the external application: **#STN: <cmdTerminateValue>** where: **<cmdTerminateValue>** is defined as **<cmdType>** + **terminate offset**; the terminate offset equals 100. Note: every time the SIM application issues a **proactive command** that requires

#STIA - SIM Toolkit Interface Activation	SELINT 2

user interaction an unsolicited code will be sent, if enabled with **#STIA** command, as follows:

- if **<mode>** parameter of **#STIA** command has been set to 3 (reduced unsolicited indication) an unsolicited indication will be sent, indicating the type of **proactive command** issued by the SIM:

  #STN: <cmdType>

- if **<mode>** parameter of **#STIA** command has been set to 2 (extended unsolicited indication) the format of the unsolicited indication depends on the specific command:

  if ***<cmdType>=1*** *(REFRESH)*

  an unsolicited notification will be sent to the user:

  #STN: <cmdType>,<refresh type>

  where:
  <refresh type>
  0 - SIM Initialization and Full File Change Notification;
  1 - File Change Notification;
  2 - SIM Initialization and File Change Notification;
  3 - SIM Initialization;
  4 - SIM Reset

  In this case neither **#STGI** nor **#STSR** commands are required:
  - **AT#STGI** is accepted anyway.
  - **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

  if ***<cmdType>=17*** *(SEND SS)*
  if ***<cmdType>=19*** *(SEND SHORT MESSAGE)*
  if ***<cmdType>=20*** *(SEND DTMF)*
  if ***<cmdType>=32*** *(PLAY TONE)*

  an unsolicited notification will be sent if allowed by SIM (see GSM 11.14):

  #STN: <cmdType>[,<text>]

  where:
  <text> - (optional) text to be displayed to user

  In these cases neither **#STGI** nor **#STSR** commands are required:

#STIA - SIM Toolkit Interface Activation	SELINT 2

- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

In case of SEND SHORT MESSAGE (**<cmdType>**=19) command if sending to network fails an unsolicited notification will be sent

#STN: 119

if ***<cmdType>=33*** *(DISPLAY TEXT)*

an unsolicited notification will be sent if allowed by SIM (see GSM 11.14):

#STN: <cmdType>[,<cmdDetails>[,<text>]

where:
<cmdDetails> - unsigned Integer used as a bit field.
0..255 - used as a bit field:
bit 1:
0 - normal priority
1 - high priority
bits 2 to 7: reserved for future use
bit 8:
0 - clear message after a delay
1 - wait for user to clear message
<text> - (optional) text to be displayed to user

In this case:
1. if **<cmdDetails>/bit8** is **0** neither **#STGI** nor **#STSR** commands are required:
   - **AT#STGI** is accepted anyway.
   - **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.
2. If **<cmdDetails>/bit8** is 1 **#STSR** command is required

if ***<cmdType>=40*** *(SET UP IDLE MODE TEXT)*

an unsolicited notification will be sent:

#STN: <cmdType>[,<text>]

where:
<text> - (optional)text to be displayed to user

In these cases neither **#STGI** nor **#STSR** commands are required:
- **AT#STGI** is accepted anyway.

#STIA - SIM Toolkit Interface Activation	SELINT 2

- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

if ***<cmdType>=18*** *(SEND USSD)*

an unsolicited notification will be sent to the user:

#STN: <cmdType>[,<text>]

where:
<text> - optional text string sent by SIM

In this case:
- **AT#STSR=18,20** can be sent to end USSD transaction.
- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

if ***<cmdType>=5*** *(SET UP EVENT LIST)*

an unsolicited notification will be sent:

#STN: <cmdType>[,<event list mask>]

where:
<event list mask> - (optional)hexadecimal number representing the list of events to monitor (see GSM 11.14)
- '00' = MT call
- '01' = Call connected
- '02' = Call disconnected
- '03' = Location status
- '04' = User activity
- '05' = Idle screen available
- '06' = Card reader status (if class "a" is supported)
- '07' = Language selection
- '08' = Browser Termination (if class "c" is supported)
- '09' = Data available (if class "e" is supported)
- '0A' = Channel status (if class "e" is supported)

The hexadecimal number is actually a bit mask, where each bit, when set, indicates that the corresponding event has to be monitored (e.g., if <event list mask> is 0x0001, it means that MT call has to be monitored).

In these cases neither **#STGI** nor **#STSR** commands are required:
- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

#STIA - SIM Toolkit Interface Activation	SELINT 2

if ***<cmdType>=64*** *(OPEN CHANNEL)*

an unsolicited notification will be sent to the user:

#STN: <cmdType>[,<text>]

where:
<text> - optional text string sent by SIM

In this case:
- **AT#STSR=64,34** can be sent to reject request.
- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will start connection.

All other commands:

the unsolicited indication will report just the proactive command type:

#STN: <cmdType>

Note: if the **call control** or **SMS control facility in the SIM** is activated, when the customer application makes an outgoing call, or sends an SS or USSD, or an SMS, the following **#STN** unsolicited indication could be sent, according to GSM 11.14, to indicate whether the outgoing call has been accepted, rejected or modified by the SIM, or if the SMS service centre address or destination has been changed:

#STN: <cmdTerminateValue>,<Result>[,<TextInfo>[,<Number>[,<MODestAddr>]]]

where
<cmdTerminateValue>
150 - SMS control response
160 - call/SS/USSD response
<Result>
0 - Call/SMS not allowed
1 - Call/SMS allowed
2 - Call/SMS allowed with modification
<Number> - Called number, Service Center Address or SS String in ASCII format.
<MODestAddr> - MO destination address in ASCII format.
<TextInfo> - alpha identifier provided by the SIM in ASCII format.

Note: an unsolicited result code

#STIA - SIM Toolkit Interface Activation	SELINT 2
	#STN: 254 is sent if the user has indicated the need to end the proactive SIM application session (**AT#STSR=<cmdType>,**16 i.e. "proactive SIM application session terminated by the user" according to GSM 11.14). The TA does not need to respond directly, i.e. **AT#STSR** is not required. It is possible to restart the SAT session from the main menu again with the command **AT#STGI=37**. Note: The settings are saved on user profile and available on following reboot. SIM Toolkit activation/deactivation is only performed at power on. Note: from version 10.0x.xx4 the set command returns ERROR when USIM is enabled (AT#ENAUSIM? returns 1).
AT#STIA?	Read command can be used to get information about the SAT interface in the format: **#STIA: <state>,<mode>,<timeout>,<SatProfile>** where: **<state>** - the device is in one of the following state: 0 - SIM has not started its application yet 1 - SIM has started its application (SAT main menu ready) **<mode>** - SAT and unsolicited indications enabling status (see above) **<timeout>** - time-out for user responses (see above) **<SatProfile>** - SAT Terminal Profile according to GSM 11.14, i. e. the list of SIM Application Toolkit facilities that are supported by the ME. The profile cannot be changed by the TA. Note: In SAT applications usually an SMS message is sent to the network provider containing service requests, e.g. to send the latest news. The provider returns a message with the requested information. Before activating SAT it is recommended to set the SMS text mode with command **AT+CMGF=1** and to enable unsolicited indications for incoming SMS messages with command **+CNMI**.
AT#STIA=?	Test command returns the range of available values for the parameters **<mode>** and **<timeout>**.
Note	Just one instance at a time, the one which first issued **AT#STIA=*n*** (with ***n*** different from zero), is allowed to issue SAT commands, and this is valid till the same instance issues **AT#STIA=0**. After power cycle another instance can enable SAT.

#STIA - SIM Toolkit Interface Activation	SELINT 2
Note	A typical SAT session on AT interface starts after an **#STN: 37** unsolicited code is received, if enabled(see above). At that point usually an **AT#STGI=37** command is issued (see **#STGI**), and after the SAT main menu has been displayed on TE an **AT#STSR=37,0,x** command is issued to select an item in the menu (see **#STSR**).

3.5.7.12.2. SIM Tookit Get Information - #STGI

#STGI - SIM Tookit Get Information	SELINT 2
AT#STGI=[<cmdType>]	**#STGI** set command is used to request the parameters of a **proactive command** from the ME. Parameter: **<cmdType>** - **proactive command** ID according to GSM 11.14 (decimal); these are only those command types that use the AT interface; SAT commands which are not using the AT interface (not MMI related SAT commands, e.g. PROVIDE LOCAL INFORMATION) are executed without sending any indication to the user 1 - REFRESH 5 – SET UP EVENT LIST 16 - SET UP CALL 17 - SEND SS 18 - SEND USSD 19 - SEND SHORT MESSAGE 20 - SEND DTMF 32 - PLAY TONE 33 - DISPLAY TEXT 34 - GET INKEY 35 - GET INPUT 36 - SELECT ITEM 37 - SET UP MENU 40 – SET UP IDLE MODE TEXT 64 – OPEN CHANNEL Requested command parameters are sent using an **#STGI** indication: **#STGI: <parameters>** where **<parameters>** depends upon the ongoing **proactive command** as follows: *if **<cmdType>=1** (REFRESH)* **#STGI: <cmdType>,<refresh type>** where: **<refresh type>**

#STGI - SIM Tookit Get Information	SELINT 2

0 - SIM Initialization and Full File Change Notification;
1 - File Change Notification;
2 - SIM Initialization and File Change Notification;
3 - SIM Initialization;
4 - SIM Reset

if ***<cmdType>=5*** *(SET UP EVENT LIST)*

#STGI: <cmdType>,<event list mask>

where:
<event list mask> - hexadecimal number representing the list of events to monitor (see GSM 11.14):

- '00' = MT call
- '01' = Call connected
- '02' = Call disconnected
- '03' = Location status
- '04' = User activity
- '05' = Idle screen available
- '06' = Card reader status (if class "a" is supported)
- '07' = Language selection
- '08' = Browser Termination (if class "c" is supported)
- '09' = Data available (if class "e" is supported)
- '0A' = Channel status (if class "e" is supported)

The hexadecimal number is actually a bit mask, where each bit, when set, indicates that the corresponding event has to be monitored (e.g., if <event list mask> is 0x0001, it means that MT call has to be monitored).

if ***<cmdType>=16*** *(SET UP CALL)*

#STGI: <cmdType>,<commandDetails>,[<confirmationText>], <calledNumber>

where:
<commandDetails> - unsigned integer, used as an enumeration
0 Set up call, but only if not currently busy on another call
1 Set up call, but only if not currently busy on another call, with redial
2 Set up call, putting all other calls (if any) on hold
3 Set up call, putting all other calls (if any) on hold, with redial
4 Set up call, disconnecting all other calls (if any)
5 Set up call, disconnecting all other calls (if any), with redial
<confirmationText> - string for user confirmation stage
<calledNumber> - string containing called number

#STGI - SIM Tookit Get Information	SELINT 2

*if <**cmdType**>=**17** (SEND SS)*
*if <**cmdType**>=**18** (SEND USSD)*
*if <**cmdType**>=**19** (SEND SHORT MESSAGE)*
*if <**cmdType**>=**20** (SEND DTMF)*
*if <**cmdType**>=**32** (PLAY TONE)*
*if <**cmdType**>=**40** (SET UP IDLE MODE TEXT)*
*if <**cmdType**>=**64** (OPEN CHANNEL)*

#STGI: <cmdType>[,<text>]

where:

*if <**cmdType**>=**33** (DISPLAY TEXT)*

#STGI: <cmdType>,<cmdDetails>[,<text>]

where:
<cmdDetails> - unsigned Integer used as a bit field.
0..255 - used as a bit field:
bit 1:
0 - normal priority
1 - high priority
bits 2 to 7: reserved for future use
bit 8:
0 - clear message after a delay
1 - wait for user to clear message
<text> - text to be displayed to user

*if <**cmdType**>=**34** (GET INKEY)*

#STGI: <cmdType>,<commandDetails>,<text>

where:
<commandDetails> - unsigned Integer used as a bit field.
0..255 - used as a bit field:
bit 1:
0 - Digits only (0-9, *, # and +)
1 - Alphabet set;
bit 2:
0 - SMS default alphabet (GSM character set)
1 - UCS2 alphabet
bit 3:
0 - Character sets defined by bit 1 and bit 2 are enabled

#STGI - SIM Tookit Get Information	SELINT 2

1 - Character sets defined by bit 1 and bit 2 are disabled and the "Yes/No" response is requested

bits 4 to 7:
0

bit 8:
0 - No help information available
1 - Help information available

<text> - String as prompt for text.

if ***<cmdType>=35*** *(GET INPUT)*

#STGI: <cmdType>,<commandDetails>,<text>,<responseMin>, <responseMax>[,<defaultText>]

where:
<commandDetails> - unsigned Integer used as a bit field.
0..255 - used as a bit field:

bit 1:
0 - Digits only (0-9, *, #, and +)
1 - Alphabet set

bit 2:
0 - SMS default alphabet (GSM character set)
1 - UCS2 alphabet

bit 3:
0 - ME may echo user input on the display
1 - User input shall not be revealed in any way. Hidden entry mode (see GSM 11.14) is only available when using digit input. In hidden entry mode only characters (‘0’-‘9’, ‘*’ and ‘#‘) are allowed.

bit 4:
0 - User input to be in unpacked format
1 - User input to be in SMS packed format

bits 5 to 7:
0

bit 8:
0 - No help information available
1 - Help information available

<text> - string as prompt for text
<responseMin> - minimum length of user input
0..255
<responseMax> - maximum length of user input
0..255
<defaultText> - string supplied as default response text

if ***<cmdType>=36*** *(SELECT ITEM)*

#STGI - SIM Tookit Get Information	SELINT 2

The first line of output is:

#STGI: <cmdType>,<commandDetails>,<numOfItems>[,<titleText>]
<CR><LF>

One line follows for every item, repeated for **<numOfItems>**:

#STGI: <cmdType>,<itemId>,<itemText>[,<nextActionId>]

where:
<commandDetails> - unsigned Integer used as a bitfield
0..255 - used as a bit field:
bit 1:
0 - Presentation type is not specified
1 - Presentation type is specified in bit 2
bit 2:
0 - Presentation as a choice of data values if bit 1 = '1'
1 - Presentation as a choice of navigation options if bit 1 is '1'
bit 3:
0 - No selection preference
1 - Selection using soft key preferred
bits 4 to 7:
0
bit 8:
0 - No help information available
1 - Help information available
<numOfItems> - number of items in the list
<titleText> - string giving menu title
<itemId> - item identifier
1..**<numOfItems>**
<itemText> - title of item
<nextActionId> - the next proactive command type to be issued upon execution of the menu item.
0 - no next action information available.

*if **<cmdType>=37** (SET UP MENU)*

The first line of output is:

#STGI: <cmdType>,<commandDetails>,<numOfItems>,<titleText>
<CR><LF>

One line follows for every item, repeated for **<numOfItems>**:

#STGI: <cmdType>,<itemId>,<itemText>[,<nextActionId>]

#STGI - SIM Tookit Get Information	SELINT 2
	where: **<commandDetails>** - unsigned Integer used as a bitfield 0..255 - used as a bit field: **bit 1**: 0 - no selection preference 1 - selection using soft key preferred **bit 2 to 7**: 0 **bit 8**: 0 - no help information available 1 - help information available **<numOfItems>** - number of items in the list **<titleText>** - string giving menu title **<itemId>** - item identifier 1..**<numOfItems>** **<itemText>** - title of item **<nextActionId>** - the next proactive command type to be issued upon execution of the menu item. 0 - no next action information available. Note: upon receiving the **#STGI** response, the TA must send **#STSR** command (see below) to confirm the execution of the proactive command and provide any required user response, e.g. selected menu item.
AT#STGI?	The read command can be used to request the currently ongoing **proactive command** and the SAT state in the format **#STGI: <state>,cmdType>** where: **<state>** - SAT interface state (see **#STIA**) **<cmdType>** - ongoing proactive command An error message will be returned if there is no pending command.
AT#STGI=?	Test command returns the range for the parameters **<state>** and **<cmdType>**.
Note	The unsolicited notification sent to the user: **#STN: 37** is an indication that the main menu of the SIM Application has been sent to the TA. It will be stored by the TA so that it can be displayed later at any time by issuing an **AT#STGI=37** command. A typical SAT session on AT interface starts after an **#STN: 37** unsolicited code is received, if enabled. At that point usually an **AT#STGI=37** command is issued, and after the SAT main menu has been displayed on TE an **AT#STSR=37,0,x** command is issued to select an item in the menu (see below). The session usually ends with a SIM action like sending an SMS, or starting a call. After this, to restart

#STGI - SIM Tookit Get Information	SELINT 2
	the session from the beginning going back to SAT main menu it is usually required an **AT#STSR=37,16** command. The unsolicited notification sent to the user: **#STN:237** is an indication that the main menu of the SIM Application has been removed from the TA, and it is no longer available. In this case **AT#STGI=37** command response will be always **ERROR**.

3.5.7.12.3. SIM Tookit Send Response - #STSR

#STSR - SIM Tookit Send Response	SELINT 2
AT#STSR= **[<cmdType>,** **<userResponse>** **[,<data>]]**	The write command is used to provide to SIM user response to a command and any required user information, e.g. a selected menu item. Parameters: **<cmdType>** - integer type; **proactive command** ID according to GSM 11.14 (see **#STGI**) **<userResponse>** - action performed by the user 0 - command performed successfully (call accepted in case of call setup, start connection in case of open channel request) 16 - proactive SIM session terminated by user 17 - backward move in the proactive SIM session requested by the user 18 - no response from user 19 - help information required by the user 20 - USSD/SS Transaction terminated by user 32 - TA currently unable to process command 34 - user has denied SIM call setup request 35 - user cleared down SIM call before connection or network release **<data>** - data entered by user, depending on **<cmdType>**, only required if **<Result>** is 0: ***Get Inkey*** **<data>** contains the key pressed by the user; used character set should be the one selected with **+CSCS**. Note: if, as a user response, a binary choice (Yes/No) is requested by the SIM application using bit 3 of the **<commandDetails>** parameter the valid content of the **<inputString>** is: a) “IRA”, ”8859-1”, ”PCCP437” charsets: “Y” or “y” (positive answer) and “N” or “n” (negative answer) b) UCS2 alphabet “0079” or “0059” (positive answer) and “006E” or “004E” (negative answer) ***Get Input***

#STSR - SIM Tookit Send Response	SELINT 2
	<data> - contains the string of characters entered by the user (see above) ***Select Item*** **<data>** - contains the item identifier selected by the user Note: Use of icons is not supported. All icon related actions will respond with no icon available.
AT#STSR?	The read command can be used to request the currently ongoing **proactive command** and the SAT state in the format **#STSRI: <state>,<cmdType>** where: **<state>** - SAT interface state (see **#STIA**) **<cmdType>** - ongoing proactive command An error message will be returned if there is no pending command.
AT#STSR=?	Test command returns the range for the parameters **<state>** and **<cmdType>**.

3.5.7.12.4. SIM Tookit terminal Attach - #STTA

#STTA – SIM Toolkit Terminal Attach	SELINT 2
AT#STTA=<state>	This command attaches/detaches the SIM Toolkit application to the AT instance reserved for this use. Parameters: **<state>:** attached state 0 – SIM Toolkit detaches 1 – SIM Toolkit attaches If SIM Toolkit application has been already attached/detached the command does nothing and returns OK.
AT#STTA?	Read command reports the current **<state>** in the format: **#STTA: <state>**
AT#STTA=?	Test command reports the supported range of values for parameter **<state>**
Note	The AT instance reserved for the SIM Toolkit application is the #3. Issuing AT#STTA=<state> when the AT instance has been already attached to another service (CMUX, SMSATRUN/TCPATRUN, OTA) causes an ERROR result code to be returned.

3.5.7.12.5. SIM Tookit Show Activation - #STSA

#STSA - SIM Toolkit Show Activation	SELINT 2
AT#STSA	Execution command returns the SIM Toolkit activation status, in the format: **#STSA: <menu_created>,<instance>,<activated_instance>** where: **<menu_created>** - 0 – SIM Toolkit SET UP MENU command not received, main menu not present 1- SIM Toolkit SET UP MENU command received, main menu present **<instance>** - instance number where this **#STSA** command has been issued **<activated_instance>** - instance where SIM Toolikit is active for menu interaction Note: if the SIM Toolkit is not active, the command returns just the **OK** result code.
AT#STSA=?	Test command returns the **OK** result code.

3.5.7.13. Jammed Detect & Report AT Commands

3.5.7.13.1. Jammed Detect & Report - #JDR

#JDR - Jammed Detect & Report	**SELINT 0 / 1**
AT#JDR[= [<mode> [,<MNPL>, <DCMN>]]]	Set command allows to control the Jammed Detect & Report feature. The MODULE can detect if a communication Jammer is active in its range and give indication to the user of this condition either on the serial line with an unsolicited code or on a dedicated GPIO by rising it. Parameters: **<mode>** - behaviour mode of the Jammed Detect & Report 0 - disables Jammed Detect & Report (factory default) 1 - enables the Jammed Detect; the Jammed condition is reported on pin GPIO2/JDR GPIO2/JDR **Low** - Normal Operating Condition GPIO2/JDR **High** - Jammed Condition. 2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format: **#JDR: <status>** where: **<status>** JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred. 3 - enables the Jammed Detect; the MODULE will make both the actions as for **<mode>=1** and **<mode>=2**. 4 - enables the Jammed Detect; the Jammed condition is reported with an unsolicited code every 3s on serial line, in the format: **#JDR: <status>** where: **<status>** JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred. 5 - enables the Jammed Detect; the MODULE will make both the actions as for **<mode>=1** and **<mode>=4**. **<MNPL>** - Maximum Noise Power Level 0..127 (factory default is 70) **<DCMN>** - Disturbed Channel Minimum Number 0..254 (factory default is 5)

#JDR - Jammed Detect & Report	SELINT 0 / 1
	Note: issuing **AT#JDR<CR>** is the same as issuing the Read command. Note: issuing **AT#JDR=<CR>** is the same as issuing the command **AT#JDR=0<CR>**.
AT#JDR?	Read command reports the current behaviour mode, Maximum Noise Power Level and Disturbed Channel Minimum Number, in the format: **#JDR: <mode>,<MNPL>,<DCMN>**
AT#JDR=?	Test command reports the supported range of values for the parameters **<mode>**,**<MNPL>** and **<DCMN>**
Example	AT#JDR=2 OK *…jammer enters in the range…* #JDR: JAMMED *…jammer exits the range…* #JDR: OPERATIVE
Note	If the device is installed in a particular environment where the default values are not satisfactory the two parameters **<MNPL>** and **<DCMN>** permit to adapt the detection to all conditions.

#JDR - Jammed Detect & Report	SELINT 2
AT#JDR= [<mode> [,<MNPL>, <DCMN>]]	Set command allows to control the Jammed Detect & Report feature. The MODULE can detect if a communication Jammer is active in its range and give indication to the user of this condition either on the serial line with an unsolicited code or on a dedicated GPIO by rising it. Parameters: **<mode>** - behaviour mode of the Jammed Detect & Report 0 - disables Jammed Detect & Report (factory default) 1 - enables the Jammed Detect; the Jammed condition is reported on pin GPIO2/JDR GPIO2/JDR **Low** - Normal Operating Condition GPIO2/JDR **High** - Jammed Condition. 2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format: **#JDR: <status>** where: **<status>** JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred. 3 - enables the Jammed Detect; the MODULE will make both the actions as for **<mode>=1** and **<mode>=2**.

#JDR - Jammed Detect & Report	SELINT 2
	4 - enables the Jammed Detect; the Jammed condition is reported with an unsolicited code every 3s on serial line, in the format: **#JDR: <status>** where: **<status>** JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred. 5 - enables the Jammed Detect; the MODULE will make both the actions as for **<mode>=1** and **<mode>=4**. 6 - enables the Jammed Detect (this value is available only for 10.0x.xxx release); the Jammed condition is reported in the format: **#JDR: <status>** where: **<status>** JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred UNKNOWN – default state before first successful PLMN searching **<MNPL>** - Maximum Noise Power Level 0..127 (factory default is 70) **<DCMN>** - Disturbed Channel Minimum Number 0..254 (factory default is 5)
AT#JDR?	Read command reports the current behaviour mode, Maximum Noise Power Level and Disturbed Channel Minimum Number, in the format: **#JDR: <mode>,<MNPL>,<DCMN>**
AT#JDR=?	Test command reports the supported range of values for the parameters **<mode>**,**<MNPL>** and **<DCMN>**
Example	AT#JDR=2 OK *…jammer enters in the range…* #JDR: JAMMED *…jammer exits the range…* #JDR: OPERATIVE AT#JDR=6 #JDR: JAMMED //when jammed OK AT#JDR=6 #JDR: OPERATIVE //when in normal operating mode OK AT#JDR=6

#JDR - Jammed Detect & Report	SELINT 2
	#JDR: UNKNOWN // default state before 1st PLMN searching OK
Note	If the device is installed in a particular environment where the default values are not satisfactory the two parameters **<MNPL>** and **<DCMN>** permit to adapt the detection to all conditions.

3.5.7.13.2. Jammed detect and report enhanced - #JDRENH

#JDRENH – Enhanced Jamming Detection and Reporting	SELINT 2
AT#JDRENH[=<type>[,<mode>[,<Param1>[,<Param2>[,<Timer>]]]]	Set command allows to control the Enhanced Jamming Detection & Reporting feature, that can be considered an extension of AT#JDR. Parameters: <**type**> - Jamming Reporting Type 0 - Disable the feature (factory default). 1 - Enable the JDRE; jamming condition is reported on pin GPIO2/JDR. GPIO/JDR **Low** – Normal Operating Condition. GPIO/JDR **High** – Jammed Condition. 2 - Enable the JDRE; jamming condition is reported with a single unsolicited result code on serial port, in the format: **#JDRENH:** <**status**> Where: <**status**> **JAMMED** – Jammed condition detected **OPERATIVE** – Normal Operating condition restored. This code will be shown only after a jammed condition has occurred. 3 - Enable the JDRE; the MODULE will execute both actions as for <**type**>=**1** and <**type**>=**2**. 4 - Enable the JDRE; jamming condition is reported with an unsolicited code every 3s on serial port, in format: **#JDRENH:** <**status**> Where: <**status**> **JAMMED** – Jammed condition detected **OPERATIVE** – Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.

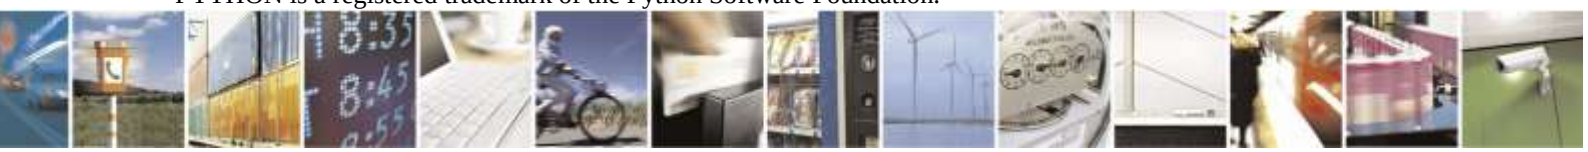
	5 - Enable the JDRE; the MODULE will execute both actions as for <**type**>=**1** and <**type**>=**4**. <**mode**> - This parameter sets the method to be used to detect the jamming condition 1 - Method 1 – Counter of Disturbed Channels for band 2 - Method 2 – Sudden variation of the signal strength 3 – Method 1 whit all JDRENH counters resetted every time the module receives a good BSIC <**Param1**> - The meaning of this parameter depends by the selected <**mode**>. When **<mode>=1,** <**Param1**> is used to set the minimum number of Disturbed Channels, for Band, to be considered to measure the jamming condition Range 1-50, default value 10. When **<mode>=2**, <**Param1**> is used to set the value of the minimum variation of received signal strength of the channel, in negative dBm, to be considered to measure the jamming condition. Range 1-20, default value 5. <**Param2**> - The meaning of this parameter depends by the selected <**mode**>. When **<mode>=1,** <**Param2**> is used to set the maximum noise level, in negative dBm, to do not consider the bad channel decoding like a jamming condition. Range 35 – 127, default value 110. When **<mode>=2,** <**Param2**> is used to set the minimum number of Disturbed Channels to be considered to measure the jamming condition situation. Range 1 - 20, default value 5. <**Time**> - This parameter sets, for both methods, the Jamming Reporting timer. The timer **<Time>** starts when the jamming condition is detected; when the timer expires, if the jamming condition is still true, the jamming is notified. 1 – 254 (default 10) 255 - jamming is notified, if required, only at the end of the scan of all the powerful channels
AT#JDRENH?	Read command reports the current parameter settings for **#JDRENH** in the format: **#JDRENH: <type>,<mode>,<Param1>,<Param2>,<Time>**
AT#JDRENH=?	Test command reports the supported range of values for parameters **<type>**,**<mode>**,**<Param1>,<Param2>,<Time>**

3.5.7.14. Easy Script® Extension - Python[40] Interpreter, AT Commands

3.5.7.14.1. Write Script - #WSCRIPT

#WSCRIPT - Write Script	**SELINT 0 / 1**
AT#WSCRIPT= <script_name>, <size> [,<hidden>]	Execution command causes the MODULE to store a file in the Easy Script® related NVM, naming it **<script_name>** The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: **Flow control: hardware.** **Baud rate: 115200 bps** Parameters: **<script_name>** - name of the file in NVM, string type (max 16 chars, case sensitive). **<size>** - file size in bytes **<hidden>** - file hidden attribute 0 - file content is readable with **#RSCRIPT** (default). 1 - file content is hidden, **#RSCRIPT** command will report empty file. The device shall prompt a three character sequence **<greater_than><greater_than><greater_than>** **(IRA 62, 62, 62)** after command line is terminated with **<CR>**; after that a file can be entered from TE, sized **<size>** bytes. The operations completes when all the bytes are received. If writing ends successfully, the response is **OK**; otherwise an error code is reported. Note: the file name should be passed between quotes; every textual script file must have **.py** extension, whilst every pre-compiled executable script file must have **.pyo** extension; file names are case sensitive. Note: when sending the script be sure that the line terminator is **<CR><LF>** and that your terminal program does not change it. Note: in case of repeated unexpected ERROR response at the end of file download it is strongly suggested to set AT#CPUMODE=1 (when available).

[40] PYTHON is a registered trademark of the Python Software Foundation.



#WSCRIPT - Write Script	SELINT 0 / 1
AT#WSCRIPT=?	Test command returns **OK** result code.
Example	AT#WSCRIPT="First.py ",54,0 *>>> here receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then type or send the script, sized 54 bytes* OK Script has been stored.
Note	It's recommended to use the extension **.py** only for textual script files and the extension **.pyo** only for pre-compiled executable script files.
Note	It's recommended to use the extension **.py** only for textual script files and the extension **.pyo** only for pre-compiled executable script files.

#WSCRIPT - Write Script	SELINT 2
AT#WSCRIPT= [<script_name>, <size>, [,<hidden>]]	Execution command causes the MODULE to store a file in the Easy Script® related NVM, naming it **<script_name>** The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: **Flow control: hardware.** **Baud rate: 115200 bps** Parameters: **<script_name>** - name of the file in NVM, string type (max 16 chars, case sensitive). **<size>** - file size in bytes **<hidden>** - file hidden attribute 0 - file content is readable with **#RSCRIPT** (default). 1 - file content is hidden, **#RSCRIPT** command will report empty file. The device shall prompt a five character sequence **<CR><LF><greater_than><greater_than><greater_than>** **(IRA 13, 10, 62, 62, 62)** after command line is terminated with **<CR>**; after that a file can be entered from TE, sized **<size>** bytes. The operations completes when all the bytes are received. If writing ends successfully, the response is **OK**; otherwise an error code is reported. Note: the file name should be passed between quotes; every textual script file must have **.py** extension, whilst every pre-compiled executable script file must have **.pyo** extension; file names are case sensitive. Note: when sending the script be sure that the line terminator is **<CR><LF>** and that your terminal program does not change it.

#WSCRIPT - Write Script	SELINT 2
	Note: in case of repeated unexpected ERROR response at the end of file download it is strongly suggested to set AT#CPUMODE=1 (when available).
AT#WSCRIPT=?	Test command returns **OK** result code.
Example	AT#WSCRIPT="First.py ",54,0 *>>> here receive the prompt; then type or send the textual script, sized 54 bytes* OK *Textual script has been stored*
Note	It's recommended to use the extension **.py** only for textual script files and the extension **.pyo** only for pre-compiled executable script files.

3.5.7.14.2. Select Active Script - #ESCRIPT

#ESCRIPT - Select Active Script	SELINT 0 / 1
AT#ESCRIPT[= [<script_name>]]	Set command selects either a) the name of the textual script file that will be compiled and executed by the Easy Script® compiler at startup according to last **#STARTMODESCR** setting, or b) the name of the pre-compiled executable file that will be executed at startup according to last **#STARTMODESCR** setting. We call this file (either textual or pre-compiled) the **current script**. Parameter: **<script_name>** - file name, string type (max 16 chars, case sensitive). Note: all textual script files must have **.py** extension; all pre-compiled executable files must have **.pyo** extension. Note: **<script_name>** must match to the name of a file written by **#WSCRIPT** in order to have it run. Note: the command does not check whether a textual script named **<script_name>** does exist or not in the Easy Script® related NVM. If the file **<script_name>** is not present at startup then the compiler will not execute. Note: issuing **AT#ESCRIPT<CR>** is the same as issuing the Read command. Note: issuing **AT#ESCRIPT=<CR>** is the same as issuing the command **AT#ESCRIPT=””<CR>**.
AT#ESCRIPT?	Read command reports as a quoted string the file name of the **current script**.
AT#ESCRIPT=?	Test command returns **OK** result code.

#ESCRIPT - Select Active Script	SELINT 2
AT#ESCRIPT=[<script_name>]	Set command selects either c) the name of the textual script file that will be compiled and executed by the Easy Script® compiler at startup according to last **#STARTMODESCR** setting, or d) the name of the pre-compiled executable file that will be executed at startup according to last **#STARTMODESCR** setting. We call this file (either textual or pre-compiled) the **current script**. Parameter: **<script_name>** - file name, string type (max 16 chars, case sensitive). Note: all textual script files must have **.py** extension; all pre-compiled executable files must have **.pyo** extension. Note: **<script_name>** must match to the name of a file written by **#WSCRIPT** in order to have it run. Note: the command does not check whether a textual script named **<script_name>** does exist or not in the Easy Script® related NVM. If the file **<script_name>** is not present at startup then the compiler will not execute.
AT#ESCRIPT?	Read command reports as a quoted string the file name of the **current script**.
AT#ESCRIPT=?	Test command returns **OK** result code.

3.5.7.14.3. Script Execution Start Mode - #STARTMODESCR

#STARTMODESCR - Script Execution Start Mode	SELINT 0 / 1
AT#STARTMODESCR[=<script_start_mode>[,<script_start_to>]]	Set command sets the **current script** (see **#ESCRIPT**) execution start mode. Parameter: **<script_start_mode>** - **currente script** execution start mode 0 - **current script** will be executed at startup only if the **DTR** line is found **Low** (that is: COM is not open on a PC), otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port (factory default). 1 - **current script** will be executed at startup only if the user does not send any AT command on the serial port for the time interval specified in **<script_start_to>** parameter, otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port. The **DTR** line is not tested. 2 - **current script** will be executed at startup in any case. **DTR** line and if the user does not send any AT command on the serial port have no influence on script execution. But AT command interface will be available on serial port ASC0 and connected to third AT parser instance.

#STARTMODESCR - Script Execution Start Mode	SELINT 0 / 1
	See ”Easy Script in Python” document for further details on this execution start mode. **<script_start_to> - current script** start time-out; 10..60 - time interval in seconds; this parameter is used only if parameter **<script_start_mode>** is set to 1; it is the waiting time for an AT command on the serial port to disable active script execution start. If the user does not send any AT command on the serial port for the time specified in this parameter active script will be executed (default is 10). Note: issuing **AT#STARTMODESCR<CR>** is the same as issuing the Read command.
AT#STARTMODESCR?	Read command reports the **current script** start mode and the **current script** start time-out, in the format: **#STARTMODESCR= <script_start_mode>,<script_start_timeout>**
AT#STARTMODESCR=?	Test command returns the range of available values for parameters **<script_start_mode>** and **<script_start_timeout>**, in the format: **#STARTMODESCR: (0-2),(10-60)** In versions 13.00.xxx: **#STARTMODESCR: (0-1),(10-60)**

#STARTMODESCR - Script Execution Start Mode	SELINT 2
AT#STARTMODESCR= <script_start_mode> [,<script_start_to>]	Set command sets the **current script** (see **#ESCRIPT**) execution start mode. Parameter: **<script_start_mode> - currente script** execution start mode 0 - **current script** will be executed at startup only if the **DTR** line is found **Low** (that is: COM is not open on a PC), otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port (factory default). 1 - **current script** will be executed at startup only if the user does not send any AT command on the serial port for the time interval specified in **<script_start_to>** parameter, otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port. The **DTR** line is not tested. 2 - **current script** will be executed at startup in any case. **DTR** line and if the user does not send any AT command on the serial port have no influence on script execution. But AT command interface will be available on serial port ASC0 and connected to third AT parser instance. See ”Easy Script in Python” document for further details on this execution start mode. Not available in versions 13.00.xxx.

#STARTMODESCR - Script Execution Start Mode	SELINT 2
	<script_start_to> - **current script** start time-out; 10..60 - time interval in seconds; this parameter is used only if parameter **<script_start_mode>** is set to 1; it is the waiting time for an AT command on the serial port to disable active script execution start. If the user does not send any AT command on the serial port for the time specified in this parameter active script will be executed (default is 10).
AT#STARTMODESCR?	Read command reports the **current script** start mode and the **current script** start time-out, in the format: **#STARTMODESCR= <script_start_mode>,<script_start_timeout>**
AT#STARTMODESCR=?	Test command returns the range of available values for parameters **<script_start_mode>** and **<script_start_timeout>**, in the format: **#STARTMODESCR: (0-2),(10-60)**

3.5.7.14.4. Execute Active Script - #EXECSCR

#EXECSCR - Execute Active Script	SELINT 0 / 1
AT#EXECSCR	Execution command causes the **current script** (see **#ESCRIPT**) execution not at startup. This command is useful when the execution at startup has been blocked deliberately and the user wants to control execution start.
AT#EXECSCR?	Read command has the same behaviour as execution command
AT#EXECSCR=?	Test command returns **OK** result code.

#EXECSCR - Execute Active Script	SELINT 2
AT#EXECSCR	Execution command causes the **current script** (see **#ESCRIPT**) execution not at startup. This command is useful when the execution at startup has been blocked deliberately and the user wants to control execution start.
AT#EXECSCR=?	Test command returns **OK** result code.

3.5.7.14.5. Read Script - #RSCRIPT

#RSCRIPT - Read Script	SELINT 0 / 1
AT#RSCRIPT= <script_name>	Execution command reports the content of file **<script_name>**. Parameter: **<script_name>** - file name, string type (max 16 chars, case sensitive). The device shall prompt a three character sequence **<less_than><less_than><less_than>** **(IRA 60, 60, 60)**

#RSCRIPT - Read Script	SELINT 0 / 1
	followed by the file content. Note: if the file **<script_name>** was saved with the hidden attribute, then an empty file is reported with the **OK** result code. Note: If the file **<script_name>** is not present an error code is reported.
AT#RSCRIPT=?	Test command returns **OK** result code.
Example	AT#RSCRIPT="First.py " *hereafter receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then the script is displayed, immediately after the prompt* <<<import MDM MDM.send('AT\r',10) Ans=MDM.receive(20) OK

#RSCRIPT - Read Script	SELINT 2
AT#RSCRIPT=[<script_name>]	Execution command reports the content of file **<script_name>**. Parameter: **<script_name>** - file name, string type (max 16 chars, case sensitive). The device shall prompt a five character sequence **<CR><LF><less_than><less_than><less_than>** **(IRA 13, 10, 60, 60, 60)** followed by the file content. Note: if the file **<script_name>** was saved with the hidden attribute, then an empty file is reported with the **OK** result code. Note: If the file **<script_name>** is not present an error code is reported.
AT#RSCRIPT=?	Test command returns **OK** result code.
Example	AT#RSCRIPT="First.py " *hereafter receive the prompt; then the script is displayed, immediately after the prompt* <<<import MDM MDM.send('AT\r',10) Ans=MDM.receive(20) OK

3.5.7.14.6. List Script Names - #LSCRIPT

#LSCRIPT - List Script Names	SELINT 0 / 1
AT#LSCRIPT	Execution command reports either the list of file names for the files currently stored

#LSCRIPT - List Script Names	SELINT 0 / 1
	in the Easy Script® related NVM and the available free NVM memory in the format: **[#LSCRIPT: <script_name1> <size1>…** **[<CR><LF><CR><LF>#LSCRIPT: <script_name*n*> <size*n*>]]** **<CR><LF><CR><LF>#LSCRIPT: free bytes: <free_NVM>** where: **<script-name*n*>** - file name, quoted string type (max 16 chars, case sensitive) **<size*n*>** - size of script in bytes **<free_NVM>** - size of available NVM memory in bytes
AT#LSCRIPT?	Read command has the same behavior of Execution command.
Example	AT#LSCRIPT #LSCRIPT: First.py 51 #LSCRIPT: Second.py 178 #LSCRIPT: Third.py 95 #LSCRIPT: free bytes: 20000 OK

#LSCRIPT - List Script Names	SELINT 2
AT#LSCRIPT	Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM and the available free NVM memory in the format: **[#LSCRIPT: <script_name1>,<size1>…** **[<CR><LF>#LSCRIPT: <script_name*n*>,<size*n*>]]** **<CR><LF>#LSCRIPT: free bytes: <free_NVM>** where: **<script-name*n*>** - file name, quoted string type (max 16 chars, case sensitive) **<size*n*>** - size of script in bytes **<free_NVM>** - size of available NVM memory in bytes
AT#LSCRIPT=?	Test command returns **OK** result code.
Example	AT#LSCRIPT #LSCRIPT: “First.py”,51 #LSCRIPT: “Second.py”,178 #LSCRIPT: “Third.py”,95 #LSCRIPT: free bytes: 20000 OK

3.5.7.14.7. List Script Names with CRC16 info - #LCSCRIPT

#LCSCRIPT - List Script Names with CRC16 info	SELINT 2
AT#LCSCRIPT	Execution command reports either the list of file names for the files currently stored

#LCSCRIPT - List Script Names with CRC16 info	SELINT 2
	in the Easy Script® related NVM, adding CRC16 information, and the available free NVM memory in the format: **[#LCSCRIPT: <script_name1>,<size1>[,<crc1>]…** **[<CR><LF>#LCSCRIPT: <script_name*n*>,<size*n*>[,<crc*n*>]]]** **<CR><LF>#LCSCRIPT: free bytes: <free_NVM>** where: **<script-name*n*>** - file name, quoted string type (max 16 chars, case sensitive) **<size*n*>** - size of script in bytes **<crc*n*>** - CRC16 poly (x^16+x^12+x^5+1) of script in hex format **<free_NVM>** - size of available NVM memory in bytes Note: CRC16 is calculated using the standard reversed CRC16-CCITT x^16+x^12+x^5+1 polynomial (0x1021 representation reversed) with initial value FFFF. Note: if one file currently stored in NVM is in use than CRC16 cannot be calculated and execution command does not report **<crc*n*>** for that file. This is always true if command is executed by a Python script because at least the file pointed by #ESCRIPT is in use.
AT#LCSCRIPT=<script_name>	Execution command reports size and CRC16 information of file **<script_name>** in the format: **[#LCSCRIPT: <script_name>,<size>[,<crc>]]** where: **<script-name>** - file name, quoted string type (max 16 chars, case sensitive) **<size>** - size of script in bytes **<crc>** - CRC16 poly (x^16+x^12+x^5+1) of script in hex format Parameter: **<script_name>** - file name, string type (max 16 chars, case sensitive). Note: CRC16 is calculated using the standard reversed CRC16-CCITT x^16+x^12+x^5+1 polynomial (0x1021 representation reversed) with initial value FFFF. Note: if file **<script_name>** is in use than CRC16 cannot be calculated and execution command does not report **<crc>**. Note: if file **<script_name>** is not in the list of files stored in NVM execution command exits with error message.
AT#LCSCRIPT=?	Test command returns **OK** result code.
Example	AT#LCSCRIPT

#LCSCRIPT - List Script Names with CRC16 info	SELINT 2
	#LCSCRIPT: “First.py”,51,8FD6 #LCSCRIPT: “Second.py”,178,A034 #LCSCRIPT: “Third.py”,120,7C48 #LCSCRIPT: free bytes: 20000 OK AT#LCSCRIPT=“Second.py” #LCSCRIPT: “Second.py”,178,A034 OK If file Third.py is already in use. AT#LCSCRIPT #LCSCRIPT: “First.py”,51,8FD6 #LCSCRIPT: “Second.py”,178,A034 #LCSCRIPT: “Third.py”,120 #LCSCRIPT: free bytes: 20000 OK

3.5.7.14.8. Delete Script - #DSCRIPT

#DSCRIPT - Delete Script	SELINT 0 / 1
AT#DSCRIPT=<script_name>	Execution command deletes a file from Easy Script® related NVM memory. Parameter: **<script_name>** - name of the file to delete, string type (max 16 chars, case sensitive) Note: if the file **<script_name>** is not present an error code is reported.
AT#DSCRIPT=?	Test command returns **OK** result code.
Example	AT#DSCRIPT="Third.py" OK

#DSCRIPT - Delete Script	SELINT 2
AT#DSCRIPT=[<script_name>]	Execution command deletes a file from Easy Script® related NVM memory. Parameter: **<script_name>** - name of the file to delete, string type (max 16 chars, case sensitive) Note: if the file **<script_name>** is not present an error code is reported.
AT#DSCRIPT=?	Test command returns **OK** result code.
Example	AT#DSCRIPT="Third.py"

#DSCRIPT - Delete Script	SELINT 2
	OK

3.5.7.14.9. Delete All Scripts - #DASCRIPT

#DASCRIPT – Delete All Scripts	SELINT 2
AT#DASCRIPT	Execution command deletes all files from Easy Script® related NVM memory. Note: if product supports directories execution command deletes all files from current working directory, it does not delete directories.
AT#DASCRIPT=?	Test command returns **OK** result code.

3.5.7.14.10. Reboot - #REBOOT

#REBOOT - Reboot	SELINT 0 / 1
AT#REBOOT	Execution command reboots immediately the unit. It can be used to reboot the system after a remote update of the script in order to have the new one running. Note: if AT#REBOOT follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#REBOOT, to permit the complete NVM storing
AT#REBOOT?	Read command has the same behaviour of Execution command.
AT#REBOOT=?	Test command returns **OK** result code.
Example	AT#REBOOT OK … Module Reboots …

#REBOOT - Reboot	SELINT 2
AT#REBOOT	Execution command reboots immediately the unit. It can be used to reboot the system after a remote update of the script in order to have the new one running. Note: if AT#REBOOT follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#REBOOT, to permit the complete NVM storing

#REBOOT - Reboot	SELINT 2
	Note: AT#REBOOT is an obsolete AT command; please refer to AT#ENHRST to perform a module reboot
AT#REBOOT=?	Test command returns **OK** result code.
Example	AT#REBOOT OK … Module Reboots …

3.5.7.14.11. CMUX Interface Enable - #CMUXSCR

#CMUXSCR - CMUX Interface Enable	SELINT 2
AT#CMUXSCR= <enable>,[<rate>]	Set command enables/disables the 3GPP TS 27.010 multiplexing protocol control channel (see **+CMUX**) at startup before the **current script** (see **#ESCRIPT**) execution and specifies the **DTE** speed at which the device sends and receives CMUX frames (used to fix the **DTE-DCE** interface speed). Parameters: **<enable>** - enables/disables CMUX interface at startup. 0 - it disables CMUX interface at startup, before **current script** execution (factory default) 1 - it enables CMUX interface at startup, before **current script** execution **<rate>** 300 1200 2400 4800 9600 19200 38400 57600 115200 (default) If **<rate>** is omitted the value is unchanged **<enable>** and **<rate>** values are saved in NVM
AT#CMUXSCR ?	Read command returns the current value of **#CMUXSCR** parameters in the format: **#CMUXSCR: <enable>,<rate>**
AT#CMUXSCR =?	Test command reports the range for the parameters **<enable>** and **<rate>**

3.5.7.15. MMS AT Command Set

3.5.7.15.1. Set network parameters for MMS - #MMSSET

#MMSSET – Set network parameters for MMS	SELINT 2
AT#MMSSET=<cid>, <MMS proxy>, <MMS port>, <username>, <password>, <mmsc>,<host>	This command sets MMSC parameters required to send or retrieve an MMS. Note that PDP context **<cid>** should be previously set by AT+CGDCONT and activated. Parameters: **<cid>** - PDP context identifier (see **+CGDCONT** command) 1..5 - numeric parameter which specifies a particular PDP context definition **<MMS proxy>** - string that indicates MMS proxy IP address for MMS sending; it can be any valid IP address in the format xxx.xxx.xxx.xxx **<MMS port>** - integer that indicates MMS port for MMS sending **<username>** - string that indicates the user name that will be used when connecting to the MMS proxy. The valid characters are ASCII characters. Maximum length is 64 characters **<password>** - string that indicates the password that will be used when connecting to the MMS proxy. The valid characters are ASCII characters. Maximum length is 40 characters **<mmsc>** - string that indicates the MMS Server URL, i.e the address for MMS Service Centre name. The length of the string is limited to 50 characters **<host>** - string that indicates the "Host:" string to be used in the POST message sent to MMSC, instead of MMS proxy IP address. This string is used if **<MMS port>** is 0, and is required by some operators**.** The length of the string is limited to 50 characters. Note: the values set by command are directly stored in NVM and do not depend on the specific CMUX instance.
AT#MMSSET?	Read command reports the currently selected parameters in the format: **#MMSSET: <cid>,<MMS proxy>,<MMS port>,<username>,<password>,<mmsc>,<host>**
AT#MMSSET=?	Test command reports the supported range of values for parameters **<MMS APN>,<MMS proxy>,<MMS port>,<username>,<password>,<mmsc>.**

3.5.7.15.2. General settings - #MMSGS

#MMSGS – General Settings	SELINT 2
AT#MMSGS=<send retries>, <message class>, <priority>, <sender visibilty>, <delivery report>, <read report>	This command sets outgoing MMS parameters. Parameters: **<send retries>** - Number of sending retries in case of sending failure. Default is '1': message is sent once to the MMS center. Maximum tries are 3 (including the first try) **<message class>** - integer that indicates MMS class 128 – personal (default) 129 - advertisement 130 - informational 131 - auto **<priority>** - integer that indicates the priority of the MMS assigned by the originator MMS Client 128 - low 129 – normal (default) 130 - high **<sender visibility>** - integer value indicating whether the originator of the MMS wishes to show or hide her address 128 - hide 129 - show (default) **<delivery report>** - integer that specifies whether the originator MMS Client requests a delivery report from each recipient 128 - yes 129 – no (default) **<read report>** - integer that specifies whether the originator MMS Client wants a read report from each recipient 128 - yes 129 – no (default) Note: the values set by command are directly stored in NVM and do not depend on the specific CMUX instance.
AT#MMSGS?	Read command reports the currently selected parameters in the format: **#MMSGS: <send retries>,<message class>,<priority>, <sender visibilty>,<delivery report>,<read report>**
AT#MMSGS=?	Test command reports the supported range of values for parameters **<send retries>,<message class>,<priority>, <sender visibilty>,<delivery report>,<read report>.**

3.5.7.15.3. Create/Update MMS Message Mailing List - #MMSTO

#MMSTO – Create/Update MMS Message Mailing List	SELINT 2
AT#MMSTO=<op>, <recipients>	This command creates/updates a list of recipients for outgoing MMS. Parameters: **<op>** - operation 0 – overwrite (default) 1 - append **<recipients>** - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters) Note: the value of **<recipients>** set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.
AT#MMSTO?	Read command reports the currently selected **<recipients>** in the format: **#MMSTO: <recipients>**
AT#MMSTO=?	Test command reports the supported range of values for parameters **<op>** and **<recipients>** (maximum number of <recipients> addresses).
Example	*To clear whole recipients list:* *at#mmsto=0,""* *OK*

3.5.7.15.4. Send a MMS Message - #MMSSEND

#MMSSEND – Send a MMS Message	SELINT 2
AT#MMSSEND=<subject>,<attached file>,<recipients>[,<subscriber list>]	This command sends an MMS. Parameters: **<subject>** - string indicating MMS subject, with maximum input size of 41 characters **<attached file>** - string indicating the name of the image file to be attached to MMS. The maximum allowed name size is 32 characters **<recipients>** - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters) **<subscriber list>** - integer indicating whether to use or not the subscriber list created with **#MMSTO** 0 – do not use subscriber list (see **#MMSTO**), use **<recipients>** (default) 1 – use subscriber list (see **#MMSTO**) ; **<recipients>** is ignored

	The device responds to the command with the prompt '>' and waits for the message text. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). If MMS message is successfully sent, then the response is **OK**. If delivery report has been requested, a MMS Delivery Report must be sent from the MMS Proxy-Relay to the originator MMS Client. Upon receiving of such report, an unsolicited code will be sent: **#MMSSEND: <msgID>** where **<msgID>** is the reference that was originally assigned to the MMS by the MMS Proxy-Relay and included in the corresponding M-Send.conf. The ID enables an MMS Client to match delivery reports with previously sent or forwarded MMS's. If message sending fails for some reason, an error code is reported. Note: prior to send the MMS, the PDP context **<cid>** (see **#MMSSET** command) must be defined and activated using **+CGDCONT** and **#SGACT** commands. Note: only **.jpg** or **.gif** images can be sent as attachment.
AT#MMSSEND=?	Test command tests for command existence.
Example	*at+cgdcont=1,"IP","mms.tim.it","0.0.0.0",0,0* *OK* *at#sgact=1,1* *#SGACT: 10.214.84.15* *OK*

3.5.7.15.5. Add MMS attachment - #MMSATTD

#MMSATTD – Add MMS Attachment	**SELINT 2**
AT#MMSATTD=<file name>,<size>	This command causes the MODULE to store a file in the NVM, naming it **<file name>**. The file is then attached to a MMS message by **#MMSSEND**. The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: **Flow control: hardware.**

	Baud rate: 115200 bps Parameters: **<file name>** - string indicating MMS attached file name with extension, with maximum name size of 16 characters (including extension; case sensitive). **<size>** - size of the attached file, in bytes. The maximum allowed size length is 300K. The device shall prompt a five character sequence **<CR><LF><greater_than><greater_than><greater_than> (IRA 13, 10, 62, 62, 62)** after command line is terminated with **<CR>**; after that a file can be entered from TE, sized **<size>** bytes. The operations completes when all the bytes are received. If writing ends successfully, the response is **OK**; otherwise an error code is reported. Note: the file name should be passed between quotes; typically it has **.jpg** extension; file names are case sensitive. Only **.jpg** or **.gif** images can be stored to be sent as attachment. Note: when sending the script be sure that the line terminator is **<CR><LF>** and that your terminal program does not change it.
AT#MMSATTD=?	Test command reports the maximum length of **<file name>** and range for **<size>**.

3.5.7.15.6. HTTP last message - #MMSMSG

#MMSMSG - HTTP Last Message	**SELINT 2**
AT#MMSMSG	Execution command returns the last response from HTTP server (numerical code and string, if available).
AT#MMSMSG=?	Test command returns the **OK** result code.

3.5.7.15.7. Set notification handling - #MMSSNH

#MMSSNH - Set Notification Handling	**SELINT 2**
AT#MMSSNH = <mode>	Set command enables/disables the received MMS notification unsolicited indication in the ME. Parameter: **<mode>** - type of notification

#MMSSNH - Set Notification Handling	SELINT 2
	0 - disabled (factory default) 1 - enabled; the ME informs of receiving of MMS Notifications, providing the MMS Client with information about a MMS located at the recipient MMS Proxy-Relay and waiting for retrieval, through the following basic unsolicited indication: **#MMSI: "MMS NOTIFICATION"** The notification typically consists of a concatenated SMS in WAP Push format. The message can be then decoded with **#MMSLN** command. Single SMS in the notification can be listed using **+CMGL** command. It is recommended to use +CNMI command to enable unsolicited indication of incoming SMS's holding the notification. Note: It is recommended to use "AT+CNMI=2,1" command to enable unsolicited indication of incoming SMS's holding the notification, and to store them in SIM for subsequent decoding with #MMSLN command.
AT#MMSSNH?	Read command reports whether the unsolicited indication **#MMSSNH** is currently enabled or not, in the format: **#MMSSNH: <mode>**
AT#MMSSNH=?	Test command returns the supported range of values for parameter **<mode>**.
Example	*at+cnmi=2,1* *OK* *#MMSI: "MMS NOTIFICATION"* *+CMTI: "SM",1 <--- SMS received* *+CMTI: "SM",2 <--- SMS received* *at#mmsln* *#MMSLN: "+393351510315","da modulo tim a tim 3","*http://mms.tim.it/servlets/mms/*mmsc?CN12_APqoaq1jy-IlqT29d@KR0",20000* *OK* *at+cmgf=1* *OK* *at+cmgl=ALL* *+CMGL: 1,"REC READ","40099","","12/11/20,10:11:44+04"* *0C05040B8423F008042BD902010006256170706C69636174696F6E2F766E642E7761702E6D6D732D* *6D65737361676500AF848D019F8C8298434E31325F4150716F6171316A792D496C7154323964404B*

#MMSSNH - Set Notification Handling	SELINT 2
	5230008D908919802B33393333531353130333135 2F545950453D504C4D4E009 66461206D6F6475 6C6F2074696D20612074696D2033008A808E024E +CMGL: 2,"REC UNREAD","40099","","12/11/20,10:11:45+04" 0C05040B8423F008042BD90202208805810302A2FF83687474703A2F2F6D6D7 32E74696D2E69742F 736572766C6574732F6D6D732F6D6D73633F434E31325F4150716F6171316A7 92D496C7154323964 404B523000 *OK* *at+cmgd=1,4 <-- delete all sms* *OK* *at+cmgl=ALL* *OK* *at#mmsln <--- list is now empty* *OK*

3.5.7.15.8. List notifications - #MMSLN

#MMSLN - List Notifications	SELINT 2
AT#MMSLN	Execution command lists all notifications of MMS waiting to be retrieved from proxy server, by reading from SIM the concatenated SMS's containing the WAP Push notification of waiting messages, in the format **#MMSLN: <fromVal>,<subjVal>,<URI>,<size>** Where **<fromVal>:** sender address **<subjVal>:** subject **<URI>:** URI to be used to retrieve message **<size>:** message size as reported by MMSC
AT#MMSLN=?	Test command returns the **OK** result code.

3.5.7.15.9. Get MMS - #MMSGET

#MMSGET – Get MMS	SELINT 2
AT#MMSGET= <url>,<size>,<file name>	This command retrieves an MMS message from proxy server and stores it in the MODULE NVM. Note that PDP context **<cid>** (see **#MMSSET** command) must be previously defined and activated using **+CGDCONT** and **#SGACT** commands.

#MMSGET – Get MMS	SELINT 2
	Parameters: <**url**> - string indicating MMS address on proxy server, as indicated by **AT#MMSLN** command (see above) <**size**>**:** message size <**file name**> - string indicating the name of the file in NVM (with extension .mms) to be used to store the retrieved MMS; maximum length is 16 characters, including file extension
AT#MMSGET=?	Test command returns the **OK** result code.

3.5.7.15.10. Forward MMS - #MMSFWD

#MMSFWD – Forward MMS	SELINT 2
AT#MMSFWD=<da>,<url>	This command forwards an MMS message stored in proxy server to the specified destination. Note that PDP context <**cid**> (see **#MMSSET** command) must be previously defined and activated using **+CGDCONT** and **#SGACT** commands. Parameters: <**da**> - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ","). There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters) <**url**> - string indicating MMS address on proxy server, as indicated by **AT#MMSLN** command (see above) Note: this command is based upon an MMS 1.2 or higher functionality. The forward transaction consists of the M-Forward.req message, sent from the MMS Client to the MMS Proxy-Relay in order to request an MMS to be forwarded, that is located at the MMS Proxy-Relay, and could not be supported by every MMSC.
AT#MMSFWD=?	Test command returns the **OK** result code.

3.5.7.15.11. Delete MMS from the MMS proxy server - #MMSDEL

#MMSDEL – Delete MMS from the MMS proxy server	SELINT 2
AT#MMSDEL=<url>	This command deletes an MMS message stored in proxy server. Note that PDP context <**cid**> (see **#MMSSET** command) must be previously defined and activated using **+CGDCONT** and **#SGACT** commands. Parameters: <**url**> - string indicating MMS address on proxy server, as indicated by **AT#MMSLN** command (see above) Note: this command is based upon an MMS 1.3 functionality, and could not be supported by every MMSC.

#MMSDEL – Delete MMS from the MMS proxy server		SELINT 2
AT#MMSDEL=?	Test command returns the **OK** result code.	

3.5.7.15.12. List MMS files - #MMSLIMG

#MMSLIMG - List MMS files	SELINT 2
AT#MMSLIMG	Execution command reports the list of image and .mms file names for the files currently stored in the NVM in the format: **# MMSLIMG: <img_name1>,<size1>…** **[<CR><LF># MMSLIMG: <img_name*n*>,<size*n*>]]** where: **<img-name*n*>** - file name, quoted string type (max 16 chars, case sensitive) **<size*n*>** - size of file in bytes
AT#MMSLIMG=?	Test command returns **OK** result code.

3.5.7.15.13. Delete image file - #MMSDIMG

#MMSDIMG - Delete Image file	SELINT 2
AT#MMSDIMG= [<img_name>]	Set command deletes a file from NVM memory. Parameter: **<img_name>** - name of the file to delete, string type (max 16 chars, case sensitive) Note: if the file **<img_name>** is not present an error code is reported.
AT#MMSDIMG =?	Test command returns **OK** result code.

3.5.7.16. HTTP client AT Command Set

3.5.7.16.1. Configure HTTP parameters - #HTTPCFG

#HTTPCFG – configure HTTP parameters	SELINT 2
AT#HTTPCFG=<prof_id>[,<server_address>[,<server_port>[,<auth_type>[,<username>[,<password>[,<ssl_enabled>[,<timeout> [,<cid>]]]]]]]	This command sets the parameters needed to the HTTP connection Parameters: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **<server_address>** - String parameter indicating the IP address of the HTTP server. This parameter can be either: - any valid IP address in the format: “xxx.xxx.xxx.xxx”

	- any host name to be solved with a DNS query Default: “” for first and second profile; "m2mlocate.telit.com" for third profile. **<server_port> -** Numeric parameter indicating the TCP remote port of the HTTP server to connect to. Default: 80 for first and second profile; 9978 for third profile. Range 1...65535. **<auth_type> -** Numeric parameter indicating the HTTP authentication type. 0 – no authentication (default) 1 – basic authentication **<username>** - String parameter indicating authentication user identification string for HTTP. **<password>** - String parameter indicating authentication password for HTTP. **<ssl_enabled> -** Numeric parameter indicating if the SSL encryption is enabled. 0 – SSL encryption disabled (default) 1 – SSL encryption enabled **<timeout>**: Numeric parameter indicating the time interval in seconds to wait for receiving data from HTTP server. Range: (1- 65535). Default: 120. **<cid>** - Numeric parameter indicating the PDP Context Identifier. Range: (1-5). Default: 1 Note: a special form of the Set command, **#HTTPCFG=<prof_id>**, causes the values for profile number **<prof_id>** to reset to default values. Note: if the SSL encryption is enabled, the **<cid>** parameter has to be set to 1. Note: the SSL encryption can be enabled only if <Enable> parameter of #SSLEN is set to 0 and <FTPSEn> parameter of #FTPCFG is set to 0. Note: values are automatically saved in NVM.
AT#HTTPCFG?	Read command returns the current settings for each defined profile in the format: **#HTTPCFG**: **<prof_id>,<server_address>,<server_port>,<auth_type>,<username>**

	,<password>,<ssl_enabled>,<timeout>,<cid><CR><LF>[<CR><LF># HTTPCFG: <prof_id>,<server_address>,<server_port>,<auth_type>,<username> ,<password>,<ssl_enabled>,<timeout>,<cid>]<CR><LF>[…]]
AT#HTTPCFG =?	Test command returns the supported range of parameters **<prof_id>, <server_port>, <auth_type>, <ssl_enabled>, <timeout>** and **<cid>** and the maximum length of **<server_address>, <username>** and **<password>** parameters in the format: **# HTTPCFG: (list of supported <prof_id>s),<s_length>,(list of supported <server_port>s), (list of supported <auth_type>s),<u_length>,<p_length>,(list of supported <ssl_enabled>s),(list of supported <timeout>s),(list of supported <cid>s)** where: **<s_length>** - integer type value indicating the maximum length of parameter **<server_address>**. **<u_length>** - integer type value indicating the maximum length of parameter **<username>**. **<p_length>** - integer type value indicating the maximum length of parameter **<password>**

3.5.7.16.2. Send HTTP GET, HEAD or DELETE request - #HTTPQRY

#HTTPQRY – send HTTP GET, HEAD or DELETE request	**SELINT 2**
AT#HTTPQRY=<prof_id>,<command>,<resource>[,<extra_header_line>]	Execution command performs a GET, HEAD or DELETE request to HTTP server. Parameters: **<prof_id>**: Numeric parameter indicating the profile identifier. Range: 0-2 **<command>**: Numeric parameter indicating the command requested to HTTP server: 0 – GET 1 – HEAD 2 – DELETE **<resource>**: String parameter indicating the HTTP resource (uri), object of the request **<extra_header_line>**: String parameter indicating optional HTTP header line. If sending ends successfully, the response is OK; otherwise an error code is reported.

	Note: the HTTP request header sent with #HTTPQRY always contains the "Connection: close" line, and it cannot be removed. When the HTTP server answer is received, then the following URC is put on the serial port: **#HTTPRING:** **<prof_id>,<http_status_code>,<content_type>,<data_size>** Where: **<prof_id>** is defined as above **<http_status_code>** is the numeric status code, as received from the server (see RFC 2616) **<content_type>** is a string reporting the "Content-Type" header line, as received from the server (see RFC 2616) **<data_size>** is the byte amount of data received from the server. If the server does not report the "Content-Length:" header line, the parameter value is 0. Note: if there are no data from server or the server does not answer within the time interval specified in **<timeout>** parameter of **#HTTPCFG** command, then the URC **#HTTPRING <http_status_code>** parameter has value 0. Note: the time required to receive the #HTTPRING unsolicited can be greater than the one specified in <timeout> parameter of #HTTPCFG command because it also includes the time needed to send the HTTP request to the server. Note: after issuing #HTTPQRY command is not possible to change SSL configuration with #SSLSECCFG and #SSLSECDATA until #HTTPCFG is issued, because SSL connection remains up. Note: before receiving the #HTTPRING unsolicited, the following commands may answer with "+CME ERROR: Blocking read in progress": #HTTPQRY, #HTTPSND, #SGACT, #GPRS, #EMAILACT and #SEMAIL. Therefore, it is necessary to wait the unsolicited before issuing them.
AT#HTTPQRY =?	Test command reports the supported range of values for the parameters **<prof_id>** and **<command>** and the maximum length of **<resource> and <extra_header_line>** parameters in the format: **#HTTPQRY: (list of supported <prof_id>s),(list of supported <command>s),<r_length>,<m_length>** where: **<r_length>** - integer type value indicating the maximum length of

	parameter **<resource>**. **<m_length>** - integer type value indicating the maximum length of parameter **<extra_header_line>**.

3.5.7.16.3. Send HTTP POST or PUT request - #HTTPSND

#HTTPSND – send HTTP POST or PUT request	**SELINT 2**
AT#HTTPSND=<prof_id>,<command>,<resource>,<data_len>[,<post_param>[,<extra_header_line>]]	Execution command performs a POST or PUT request to HTTP server and starts sending data to the server. The device shall prompt a three character sequence **<greater_than><greater_than><greater_than>** **(IRA 62, 62, 62)** after command line is terminated with <CR>; after that the data can be entered from TE, sized <data_len> bytes. Parameters: **<prof_id>**: Numeric parameter indicating the profile identifier. Range: 0-2 **<command>**: Numeric parameter indicating the command requested to HTTP server: 0 – POST 1 – PUT **<resource>**: String parameter indicating the HTTP resource (uri), object of the request **<data_len>**: Numeric parameter indicating the data length to input in bytes **<post_param>**: Numeric/string parameter indicating the HTTP Contenttype identifier, used only for POST command, optionally followed by colon character (:) and a string that extends with sub-types the identifier: “0[:extension]” – “application/x-www-form-urlencoded” with optional extension “1[:extension]” – “text/plain” with optional extension “2[:extension]” – “application/octet-stream” with optional extension “3[:extension]” – “multipart/form-data” with optional extension other content – free string corresponding to other content type and possible sub-types **<extra_header_line>**: String parameter indicating optional HTTP header line If sending ends successfully, the response is OK; otherwise an error code is reported. Note: the HTTP request header sent with #HTTPSND always contains the

	"Connection: close" line, and it cannot be removed. When the HTTP server answer is received, then the following URC is put on the serial port: **#HTTPRING:** **<prof_id>,<http_status_code>,<content_type>,<data_size>** Where: **<prof_id>** is defined as above **<http_status_code>** is the numeric status code, as received from the server (see RFC 2616) **<content_type>** is a string reporting the "Content-Type" header line, as received from the server (see RFC 2616) **<data_size>** is the byte amount of data received from the server. If the server does not report the "Content-Length:" header line, the parameter value is 0. Note: if there are no data from server or the server does not answer within the time interval specified in **<timeout>** parameter of **#HTTPCFG** command, then the URC **#HTTPRING <http_status_code>** parameter has value 0. Note: the time required to receive the #HTTPRING unsolicited can be greater than the one specified in <timeout> parameter of #HTTPCFG command because it also includes the time needed to send the HTTP request to the server. Note: after issuing #HTTPQRY command is not possible to change SSL configuration with #SSLSECCFG and #SSLSECDATA until #HTTPCFG is issued, because SSL connection remains up. Note: before receiving the #HTTPRING unsolicited, the following commands may answer with "+CME ERROR: Blocking read in progress": #HTTPQRY, #HTTPSND, #SGACT, #GPRS, #EMAILACT and #SEMAIL. Therefore, it is necessary to wait the unsolicited before issuing them.
AT#HTTPSND =?	Test command reports the supported range of values for the parameters **<prof_id>** and **<command>** and **<data_len>** and the maximum length of **<resource>**, **<post_param>** and **<extra_header_line>** parameters in the format: **#HTTPSND: (list of supported <prof_id>s),(list of supported <command>s),<r_length>,(list of supported <data_len>s),<p_length>, <m_length>** where: **<r_length>** - integer type value indicating the maximum length of

	parameter **<resource>.** **<p_length>** - integer type value indicating the maximum length of parameter **<post_param>.** **<m_length>** - integer type value indicating the maximum length of parameter **<extra_header_line>**
Example	Post 100 byte without "Content-type" header **AT#HTTPSND=0,0,"/",100** >>> Post 100 byte with "application/x-www-form-urlencoded" **AT#HTTPSND=0,0,"/",100,0** >>> Post 100 byte with "multipart/form-data" and extension **AT#HTTPSND=0,0,"/",100,"3:boundary=----FormBoundary"** >>>

3.5.7.16.4. Receive HTTP server data - #HTTPRCV

#HTTPRCV – receive HTTP server data	**SELINT 2**
AT#HTTPRCV=<prof_id>[,<maxByte>]	Execution command permits the user to read data from HTTP server in response to a previous HTTP module request. The module is notified of these data by the **#HTTPRING** URC. The device shall prompt a three character sequence **<less_than><less_than><less_than>** **(IRA 60, 60, 60)** followed by the data. If reading ends successfully, the response is OK; otherwise an error code is reported. Parameters: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **< maxByte >** - Max number of bytes to read at a time Range: 0,64-1500 (default is 0 which means infinite size) Note: if <maxByte> is unspecified, server data will be transferred all in once. Note: If the data are not present or the **#HTTPRING <http_status_code>** parameter has value 0, an error code is reported.
AT#HTTPRCV=?	Test command reports the supported range of values for **<prof_id>** and <maxByte> parameters in the format: **# HTTPRCV: (list of supported <prof_id>s), (list of supported <maxByte>s)**

3.5.7.16.5. Receive and store HTTP server data - #HTTPRCVF

#HTTPRCVF – Receive and store HTTP server data	**SELINT 2**
AT#HTTPRCVF=<prof_id>, <dest_filename> [,<verbose>]	Execution command allows to read data from a HTTP server, in response to a previous HTTP module request, and to save it into module's file system. The module is notified of this data by the **#HTTPRING** URC. Parameter: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **<dest_filename>** - Name of the destination file to be written into module's file system, string type (max 16 chars, case sensitive). **<verbose>** - 0: Disable verbose mode (default) - 1: Enable verbose mode
AT#HTTPRCVF=?	Test command reports the range of supported values for parameter **<prof_id>** in the format: **#HTTPRCVF: (list of supported <prof_id>s)**
Note	When verbose mode is enabled, i.e. **<verbose>** is set to 1, the '#' character is printed on the AT command port every time a chunk of data is received and then written.

3.5.7.17. RSA AT Commands Set

3.5.7.17.1. Load the security data - #RSASECDATA

#RSASECDATA – Load the security data	**SELINT 2**
AT#RSASECDATA=<Action>[,<Size>]	Execution command allows to store, delete and read security data RSA key into NVM. Parameters: **<Action>** - Action to do. 0 – Delete data from NVM. 1 – Store data into NVM. 2 – Get MD5 digest of data into NVM **<Size>** - Size of security data to be stored 1..2047 If the **<Action>** parameter is 1 (store data into NVM) the device responds to the command with the prompt '>' and waits for the data to store. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If data are successfully stored, then the response is OK; if it fails for some reason, an error code is reported.

	Note: Secured data has to be in PEM format Note: private keys with password ARE NOT supported. Note: It supports standard PKCS #1 and PKCS #8 Note: **<size>** parameter is mandatory if the <write> action is issued, but it has to be omitted for <delete> or <read> actions are issued.
AT#RSASECDATA?	Read command return the present of security data in NVM **#RSASECDATA: <PrivKeyIsSet>** **<PrivKeIsset>** is 1 if related data are stored into NVM otherwise 0.
AT#RSASECDATA=?	Test command returns the range of supported values for all the parameters: **#RSASECDATA: (0-2),(1-2047)**

3.5.7.17.2. Encript data - #RSAENCRYPT

#RSAENCRYPT – Encrypt data	**SELINT 2**
AT#RSAENCRYPT=<KeyType>,<bytestoencrypt>[,<unsolicited>]	Execution command encrypts data with RSA algorithm and use for padding PKCS1 standard Parameters: **<KeyType>** - Select the key type (Public or Private) 0 – Public Key 1 – Private Key **<bytestoencrypt>** - number of bytes to be sent The device responds to the command with the prompt '>' <greater_than><space> and waits for the data to send. When < **bytestoencrypt** > bytes have been sent, operation is automatically completed. If data are successfully sent, then the response is **OK.** If data sending fails for some reason, an error code is reported **<unsolicited>** - show URC when RSA has finished the encryption (If omitted is hidden) 0: Hide 1: Show Note: The URC has this form:

	#RSAENCRYPT: <size_key_rsa> where **<size_key_rsa>** is the size in bytes of the key used with the RSA algorithm The URC indicates that the calculation is finished and the buffer can be read Note: the maximum value of **<bytestoencrypt>** is: **<size_key_rsa>** - 11 (where 11 is the padding length in bytes used in PKCS#1)
AT#RSAENCRYPT=?	Test command returns the range of supported values for parameters **<KeyType> , <bytestoencrypt> , <unsolicited>** Note: if RSA key isn't loaded into NVM or there is an error in the key the command returns: **#RSAENCRYPT: (0,1),(0),(0,1)**

3.5.7.17.3. Decript data - #RSADECRYPT

#RSADECRYPT – Decrypt data	**SELINT 2**
AT#RSADECRYPT=<KeyType>,<bytestodecrypt>[,<unsolicited>]	Execution command decrypts data with RSA algorithm Parameters: **<KeyType>** - Select the key type (Pubblic or Private) 0 – Public Key 1 – Private Key **<bytestodecrypt>** - number of bytes to be sent The device responds to the command with the prompt '>' <greater_than><space> and waits for the data to send. When **<bytestodecrypt>** bytes have been sent, operation is automatically completed.

	If data are successfully sent, then the response is **OK.** If data sending fails for some reason, an error code is reported **<unsolicited> -** show URC when RSA has finished the encryption (If omitted is hidden) 0: Hide 1: Show Note: the URC has this form: **#RSADECRYPT: <size_key_rsa>** where **<size_key_rsa>** is the size in bytes of the key used with the RSA algorithm The URC indicates that the calculation is finished and the buffer can be read Note: the value of **<bytestodecrypt>** is the size in bytes of the key RSA
AT#RSADECRYPT=?	Test command returns the range of supported values for parameters **<KeyType> , <bytestodecrypt> , <unsolicited>** Note: if RSA key isn't loaded into NVM or there is an error in the key the command returns: **#RSADECRYPT: (0,1),(0),(0,1)**

3.5.7.17.4. Resul of RSA calculation - #RSAGETRESULT

#RSAGETRESULT– Result of RSA calculation	**SELINT 2**
AT#RSAGETRESULT	Execution command reads calculated data, result of RSA encrypt or decrypt. Note: If the RSA algorithm is idle or working mode, then the command returns ERROR
AT# RSAGETRESULT?	Read command returns the state of RSA encrypt or decrypt previously given **#RSAGETRESULT: <ResultRSA>** Where **<ResultRSA>** can assume the following values:

	0: Idle or working mode < 0: Error > 0: RSA encrypt/decrypt finished (return size of key used in bytes)
AT# RSAGETRESULT=?	Test command returns **OK** result code

3.5.7.18. GNSS AT Commands Set

3.5.7.18.1. GNSS Receiver Configuration

3.5.7.18.1.1. GPS Device Type Set - $GPSD

$GPSD - GPS Device Type Set	**SELINT 2**
AT$GPSD= <device_type> [,<sub_device_type>]	Set command defines which GNSS receiver is connected to the module. It reserves the Serial port #1 of the module (TRACE) to receive the data stream coming from the attached GNSS module. Parameter: **<device type>** 0 - none; the serial port is not connected to the GNSS device and available for standard use (default for all modules except for GE864-GPS and GE910-GNSS) 1 - currently has no meaning, maintained for backward compatibility 2 - serial port connected to the GNSS serial port: controlled mode (default for GE864-GPS). This configuration is for SiRF StarIV-based GNSS modules support only (JF2-FLASH, JF2-ROM and JF2-ROM+EEPROM) 3 - serial port connected to the GNSS serial port: controlled mode. This configuration is for SiRF StarIV-based GNSS modules support only (JN3-FLASH, JN3-ROM and JN3-ROM+EEPROM). This value is not currently supported on GE910-GNSS. 4 - serial port connected to the GNSS serial port: controlled mode (default for GE910-GNSS). This configuration is for ST TeseoII-based GPS modules support only (SL869) 5 - serial port connected to the GNSS serial port: controlled mode. This configuration is for SiRF StarV-based GNSS modules support only (SE868-V2) 6 - serial port connected to the GNSS serial port: controlled mode. This configuration is for MediaTek MT3333-based GNSS modules support only (e.g. SL871) **<sub_device type>** 0 - Flash device: Flash based module (default). 1 - ROM device: ROM based module. 2 - ROM + EEPROM (or SPI Flash) device: EEPROM (or SPI Flash) based module. Note: The **<sub_device type>** can be used with SiRF Star-based GNSS modules (JF2/JN3/SE868-V2) only, i.e. when **AT$GPSD=2, AT$GPSD=3 or AT$GPSD=5.** Note: the current setting is stored through **$GPSSAV**
AT$GPSD?	Read command reports the current value of **<device_type>** and **<sub_device_type>** parameters, in the format:

$GPSD - GPS Device Type Set	SELINT 2
	$GPSD: <device_type>,<sub_device_type>
AT$GPSD=?	Test command reports the range of supported values for parameter **<device_type>,<sub_device_type>**
Example	AT$GPSD=0 OK AT$GPSD=2,1 OK AT$GPSD=4,2 ERROR

3.5.7.18.1.2. GPIO Configuration for GPS control - $GPSGPIO

$GPSGPIO – GPIO Configuration for GPS control	SELINT 2
AT$GPSGPIO= **<on_off>,** **<system_on>,** **<boot>,** **<reset>**	Execution command sets the GPIO pins to be used to drive JF2 (SE868), JN3 (SL868), SL869, SE868-V2 and SL871 GNSS modules. Parameters: **<on_off>** - GPIO pin number to be used to drive the JF2/JN3/SL869/SE868-V2's ON-OFF signal (default = 4 for SW release 10.0x.xxx and 16.0x.xxx, 1 for SW release 13.00.xxx) **<system_on>** - GPIO pin number to be used to drive the JF2/SE868-V2's SYSTEM-ON signal (default = 5 for SW release 10.0x.xxx and 16.0x.xxx, 2 for SW release 13.00.xxx) **<boot>** - GPIO pin number to be used to drive the JF2-Flash/JN3-Flash/SL869's BOOT signal (default = 6 for SW release 10.0x.xxx and 16.0x.xxx, 3 for SW release 13.00.xxx) **<reset>** - GPIO pin number to be used to drive the JF2-Flash/JN3-Flash's RESET signal (default = 7 for SW release 10.0x.xxx and 16.0x.xxx, 4 for SW release 13.00.xxx) Note: the GPIO configuration specified through this command must be coherent with the specific GNSS module that has to be used, i.e. the configuration specified through the AT$GPSD command. Therefore the GPIOs corresponding to unnecessary signals (e.g. <system_on>, <boot> and <reset> for a JN3-ROM) should be set to zero: this allows to reserve and use the minimum number of GPIOs. Note: See the Hardware User Guide to check the number of available GPIO pins. Note: the GPIO configuration correctness and functionality (i.e. possible conflicts with the GPIO configuration applied through **AT#GPIO**) are under the customer's sole responsibility.

	Note (SW release 10.0x.xxx and 16.0x.xxx only): if any of the V24 signals has been previously configured as GPIO through **AT#V24CFG**, it can be set by the extended GPIO range (GPIO # from 128 to 133) to drive the external GNSS receiver. Extended GPIOs and V24 signals correspondence is shown below: GPIO #128 → DCD GPIO #129 → CTS GPIO #130 → RING GPIO #131 → DSR GPIO #132 → DTR GPIO #133 → RTS See the Example section below for an example on how to set such GPIOs. An ERROR is returned whenever trying to set a GPIO, from the extended GPIO range, its corresponding V24 signal has not been previously configured as GPIO through **AT#V24CFG.** Note: the current GPIO configuration can be stored through **AT$GPSSAV**
AT$GPSGPIO?	Read command reports the currently selected configuration in the format: **$GPSGPIO: <on_off>,<system_on>,<boot>,<reset>**
AT$GPSGPIO=?	Test command reports supported range of values for parameters **<on_off>, <system_on>, <boot>** and **<reset>** Note (SW release 10.0x.xxx and 16.0x.xxx only)**:** the extended GPIO range is reported along with the available customer GPIO range.
Example	- For a JF2-Flash (AT$GPSD=2,0): AT$GPSGPIO=4,5,6,7 OK AT$GPSGPIO? $GPSGPIO: 4,5,6,7 OK - For a JF2-ROM (AT$GPSD=2,1): AT$GPSGPIO=4,5,0,0 OK OR AT$GPSGPIO=4,5,6,7 OK

	AT$GPSGPIO? $GPSGPIO: 4,5,0,0 OK - For a JF3-ROM (AT$GPSD=3,1): AT$GPSGPIO=4,0,0,0 OK OR AT$GPSGPIO=4,5,6,7 OK AT$GPSGPIO? $GPSGPIO: 4,0,0,0 OK SW release 10.0x.xxx and 16.0x.xxx only: - Set Command to configure GPIOs from extended GPIO range: AT$GPSGPIO=131,132,130,128 OK - Test Command showing extended GPIO range: AT$GPSGPIO=? $GPSGPIO: (1-8,128-131),(1-8,132-133),(1-8,128-131),(1-8,128-131) OK
Note	The Command is available in “Controlled Mode” only

3.5.7.18.1.3. Set the GPS serial port speed - $GPSSERSPEED

$GPSSERSPEED – Set the GPS serial port speed	**SELINT 2**
AT$GPSSERSPEED= <speed>	Execution command sets the GPS serial port communication speed. Parameters: **<speed>** - 4800(default) 9600 Note: This command can be used with SiRF-based GNSS modules, such as JF2, JN3 and SE868-V2 (**AT$GPSD=2, AT$GPSD=2,1**, **AT$GPSD=2,2, AT$GPSD=3, AT$GPSD=3,1, AT$GPSD=3,2 or AT$GPSD=5,2**), and

$GPSSERSPEED – Set the GPS serial port speed	SELINT 2
	MT3333-based GNSS modules such as SL871 (AT$GPSD=6). Note: the current setting is stored through **$GPSSAV**. Note: The module must be restarted to use the new configuration
AT$GPSSERSPEED?	Read command returns the selected serial speed in the format **$GPSSERSPEED: <speed>**
AT$GPSSERSPEED=?	Test command returns the available range for **<speed>**
Example	AT$GPSSERSPEED = 4800 OK

3.5.7.18.1.4. GPS Controller Power Management - $GPSP

$GPSP - GPS Controller Power Management	SELINT 2
AT$GPSP=<status>	Set command allows to manage power-up or down of the GPS controller Parameter: **<status>** 0 - GPS controller is powered down (default for all modules, except for GE864-GPS) 1 - GPS controller is powered up (default for GE864-GPS) Note: for the GPS product: if the GPS controller is powered down while **VAUX** pin is enabled they'll both be also powered off. Note: the current setting is stored through **$GPSSAV**
AT$GPSP?	Read command reports the current value of the **<status>** parameter, in the format: **$GPSP: <status>** Note: the **<status>** parameter does not report the real power status of the GPS module but only the value set through the set command above. The **<status>** parameter, once stored through the **AT$GPSSAV** command, specifies the power status of the GPS module (ON or OFF) at system startup
AT$GPSP=?	Test command reports the range of supported values for parameter **<status>**
Example	AT$GPSP=0 OK
Note	The command is available in "controlled mode" only

3.5.7.18.1.5. GPS Antenna Type Definition - $GPSAT

$GPSAT – GPS Antenna LNA Control	SELINT 2
AT$GPSAT= <type>	Set command selects the GPS antenna used.

	Parameter: **<type>** 0 - Disable External GPS Antenna LNA (default): GPS chip Internal LNA Gain Mode is High and **GPS_EXT_LNA_EN** signal is Low 1 - Enable External GPS Antenna LNA: GPS chip Internal LNA Gain Mode is Low and **GPS_EXT_LNA_EN** signal is High Note: the current setting is stored through **$GPSSAV**
AT$GPSAT?	Read command returns the current value of **<type>** in the format: **$GPSAT: <type>**
AT$GPSAT=?	Test command reports the range of supported values for parameter **<type>**
Example	AT$GPSAT=1 OK
Note	The command is available in "controlled mode" only This command is currently available for SirfIV-based GPS modules (JF2 and JN3) only, i.e. whenever is AT$GPSD=2 or AT$GPSD=3. This command must be issued only when the GPS receiver is operating in Full Power Mode (see **$GPSPS),** otherwise it might have no effect Since the **AT$GPSAT** command performs a hardware reconfiguration of the GPS receiver, the issuing of two consecutive **AT$GPSAT** commands should be avoided, otherwise the reconfiguration might fail: an **ERROR** is returned in the latter case If the **<type>** parameter has been set to 1, the External GPS Antenna LNA is directly driven by the GPS receiver according to its current power mode (i.e. the External GPS Antenna LNA is turned off whenever the GPS receiver is in power saving mode) Please refer to the HW User Guide for the compatible GPS antennas and their usage

3.5.7.18.1.6. Save GPS Parameters Configuration - $GPSSAV

$GPSSAV - Save GPS Parameters Configuration	**SELINT 2**
AT$GPSSAV	Execution command stores the current GNSS parameters in the NVM of the GSM module.
AT$GPSSAV=?	Test command returns the **OK** result code
Example	AT$GPSSAV OK
Note	The module must be restarted to use the new configuration

3.5.7.18.1.7. Restore To Default GPS Parameters - $GPSRST

$GPSRST - Restore To Default GPS Parameters	SELINT 2
AT$GPSRST	Execution command resets the GNSS parameters to "Factory Default" configuration and stores them in the NVM of the GSM module.
AT$GPSRST=?	Test command returns the **OK** result code
Example	AT$GPSRST OK
Note	The module must be restarted to use the new configuration

3.5.7.18.1.8. Set CPU Clock for ST TESEOII - $GPSSTCPUCLK

$GPSSTCPUCLK – Set CPU Clock for ST TESEOII	SELINT 2
AT$GPSSTCPUCLK= <cpu_clock>	Set command allows changing the CPU Clock Frequency for ST TESEOII-based GNSS modules (e.g. SL869, GE910-GNSS). Parameter: **<cpu_clock>:** 0 – 52 MHz 1 – 104 MHz 2 – 156 MHz 3 – 208 MHz Note: This command can be used with ST TESEOII-based GNSS modules only (**AT$GPSD=4**). Note: The **<cpu_clock>** setting is saved into TESEOII NVM and retained until a NVM erase or a next firmware upgrade of the GNSS receiver is performed.
AT$GPSSTCPUCLK?	Read command reports the current setting for the CPU Clock Frequency in the format: **$GPSSTCPUCLK: <cpu_clock>** Note: An ERROR is returned if the CPU Clock Frequency has never been changed. *Please refer to the Software Application Note of the GNSS receiver used for further information on the CPU Clock Frequency used by default.*
AT$GPSSTCPUCLK=?	Test command reports the supported range of values for the parameter **<cpu_clock>**

3.5.7.18.2. GNSS Power Saving Modes Management

3.5.7.18.2.1. Set The GPS Module In Power Saving Mode - $GPSPS

$GPSPS - Set The GPS Module In Power Saving Mode	SELINT 2
AT$GPSPS= <mode> [,<PTF_Period>]	Set command allows setting the GNSS module in Power saving mode. Parameters: **<mode>** - the GNSS receiver can operate in four power modes: 0 – Full Power Mode, power saving disabled (default). Full-power mode is also known as Continuous Navigation mode. This is the most accurate navigation mode and supports the most dynamic motion scenarios. 1 – TricklePower Mode. TricklePower mode is a duty cycled mode in which the system selects a minimum rate of navigation solution updates and minimizes average current. 2 – Push-To-Fix Mode. Push-to-Fix mode (PTF) is designed for applications that require infrequent position reporting. The SiRF Star receiver generally stays in the Hibernate system power state but wakes up periodically to refresh position, time, ephemeris data and RTC calibration. A pulse on the external ON_OFF line to the receiver acts as a position update request. 3 – Micro Power Mode. Micro Power mode (MPM) is a very low power maintenance mode that delivers continuous availability of the navigation solution. It is intended for low dynamics applications. It continuously maintains ephemeris data as well as a low level of uncertainty in the estimates of position, time, and receiver clock error. It achieves this by keeping the SiRFStar receiver in the Hibernate power state and leaving Hibernate only as needed to maintain these conditions. 4 – SmartGNSS I Mode. SmartGNSS I autonomously manages GNSS system usage based on signal conditions to save power. The adaptive mechanism uses fewer system resources during strong signal conditions and uses more resources during weak signal conditions in order to maintain navigation performance. 5 – SmartGNSS II Mode. SmartGNSS II includes the benefits of SmartGNSS I and achieves further power reduction by minimizing the usage of the secondary GNSS constellation **<PTF_Period>** - Push-To-Fix update period, numeric value in seconds; when mode is Push-To-Fix, the receiver turns on periodically according to this parameter (default value is 1800 sec). This parameter does have meaning only when **<mode>**=2. Note: Push-To-Fix and Micro Power modes support is not available for JN3 because it does not have an ON_OFF input. Therefore, when AT$GPSD=3, only Full Power and TricklePower modes are supported. In addition, in this case, the **<PTF_Period>** parameter is accepted but not used.

$GPSPS - Set The GPS Module In Power Saving Mode	SELINT 2
	Note: Micro Power Mode support is not currently available for SE868-V2. Note: SmartGNSS I and SmartGNSS II Modes are available on SirfStar V Flash-based GNSS receivers only (e.g. SE868-V3)
AT$GPSPS?	Read command returns the current power saving mode and push-to-fix period, in the format: **$GPSPS: <mode>,<PTF_Period>**
AT$GPSPS=?	Test command returns the available range for **<mode>** and **<PTF_Period>**
Note	Available in "controlled mode" only This command is currently available for Sirf-based GNSS modules (JF2, JN3, SE868-V2 and SE868-V3) only, i.e. whenever is AT$GPSD=2, AT$GPSD=3 or AT$GPSD=5.

3.5.7.18.2.2. Wake Up GPS From Power Saving Mode - $GPSWK

$GPSWK - Wake Up GPS From Power Saving Mode	SELINT 2
AT$GPSWK	Execution command allows waking up the GNSS module when a power saving or standby mode has been enabled. Notes for Sirf-based GNSS modules only: If the GNSS module has been configured to work in TricklePower Mode, it will start up, get a fix and then continue to work in power saving mode. If the GNSS module has been configured to work in Push-To-Fix Mode, issuing AT**$GPSWK** allows to wake up it before the Push-To-Fix update period; once a new fix will be got, the GNSS module will return to Push-To-Fix mode. If the GNSS module has been configured to work in Micro Power Mode, it will be set to Full Power Mode (same as issuing AT$GPSPS=0 command). Notes for MediaTek MT3333-based GNSS modules only: If the GNSS module has been configured to work in any of the supported Standby modes, the current Standby mode will be disabled.
AT$GPSWK=?	Test command returns the **OK** result code
Note	Available in "controlled mode" only This command is currently available for Sirf-based and MediaTek MT3333-based GNSS modules (e.g. JF2, JN3, SE868-V2 and SL871), i.e. whenever is AT$GPSD=2, AT$GPSD=3, AT$GPSD=5 or AT$GPSD=6.

3.5.7.18.2.3. Set the Periodic Power Saving Mode for MTK - $GPSMTKPPS

$GPSMTKPPS - Set the Periodic Power Saving Mode for MTK	**SELINT 2**
AT$GPSMTKPPS= <mode>[, <runtime>, <sleeptime>, <second_runtime>, <second_sleeptime>]	Set command allows setting the MediaTek MT3333-based GNSS modules' Periodic Power Saving Mode settings. Parameters: **<mode>** - the GNSS receiver can operate in five different Periodic Power Saving modes: 0 – Normal mode (Periodic Power Saving mode disabled) 1 – Periodic Backup mode 2 – Periodic Standby mode 8 – AlwaysLocate™ standby mode 9 – AlwaysLocate™ backup mode **<runtime>** - Full Power (or Normal) Period in milliseconds 1000...518400000 **<sleeptime>** - Low Power Period (backup/standby) in milliseconds 1000... 518400000 **<second_runtime>** - Full Power (or Normal) Period in milliseconds for extended acquisition if GNSS acquisition fails during **<runtime>** 0 – Disable 1000...518400000 – Enable (should be larger than the set **<runtime>** value) **<second_sleeptime>** - Low Power Period (backup/standby) in milliseconds for extended sleep if GNSS acquisition fails during **<runtime>** 0 – Disable 1000...518400000 Note: The **<runtime>, <sleeptime>, <second_runtime>, <second_sleeptime>** parameters must be set if **<mode>** is 1 or 2 otherwise **ERROR** is returned Note: The **<runtime>, <sleeptime>, <second_runtime>, <second_sleeptime>** parameters must be omitted if **<mode>** is 0, 8 or 9 otherwise **ERROR** is returned Note: **<mode>** values different from 0 can be set only when the GNSS module is powered ON and operating in Full (or Normal) Power mode. Note: the **<mode>** value 0 can be set only when the GNSS module is operating in any of the Periodic Power Saving modes. Issuing **AT$GPSMTKPPS=0** the GNSS module switches back to Full (or Normal) Power mode as soon as it wakes up according to the **<sleeptime>** and **<second_sleeptime>** values set.
AT$GPSMTKPPS?	Read command returns the current Periodic Power Saving mode in the format: **$GPSMTKPPS: <mode>[,<runtime>,<sleeptime>,<second_runtime>,<second_sleeptime>]**
AT$GPSMTKPPS=?	Test command reports the supported range of values for parameters **<mode>,<runtime>,<sleeptime>,<second_runtime>,<second_sleeptime>**

$GPSMTKPPS - Set the Periodic Power Saving Mode for MTK	SELINT 2
Note	Available in "controlled mode" only This command is currently available for MediaTek MT3333-based GNSS modules (e.g. SL871) only, i.e. whenever is AT$GPSD=6.

3.5.7.18.2.4. Set Standby Mode for MTK - $GPSMTKSTDBY

$GPSMTKSTDBY - Set Standby Mode for MTK	SELINT 2
AT$GPSMTKSTDBY= <mode>	Set command allows setting the MediaTek MT3333-based GNSS modules in Standby mode. Parameters: **<mode>** - the GNSS receiver can operate in three Standby modes: 0 – Standby Mode disabled (default). This value cannot be set and may be only reported by the read command. 1 – Stop Mode 2 – Sleep Mode Note: Stop or Sleep Standby modes can be set only when the GNSS module is powered ON and operating in full power mode. Note: the GNSS module can be forced to exit from the standby modes through the **AT$GPSWK** command
AT$GPSMTKSTDBY?	Read command returns the current Standby mode in the format: **$GPSMTKSTDBY: <mode>**
AT$GPSMTKSTDBY=?	Test command returns the available range for **<mode>**
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6.

3.5.7.18.2.5. Set MTK Communication Ports - $GPSMTKSETCOMPORT

$GPSMTKSETCOMPORT – Set MTK Communication Ports	SELINT 2
AT$GPSMTKSETCOMPORT= <port>, <mode>, <baudrate>, <protocol>	Set command allows changing the communication port configuration on MediaTek MT3333-based GNSS receivers. **<port>** - Communication Port Number 1 – UART 0 (value not currently supported) 2 – UART 1 (default) **<mode>** - Interface Operating Mode 1 – NONE 2 – UART 3 – I2C **<baudrate>** - Baudrate 4800 9600

	19200 38400 57600 115200 230400 460800 921600 <**protocol**> - Communication Protocol 1 – NMEA 2 – RTCM
AT$GPSMTKSETCOMPORT?	Read command reports the current communication port configuration in the format: **$GPSMTKSETCOMPORT:** **<port>,<mode>,<baudrate>,<protocol>**
AT$GPSMTKSETCOMPORT=?	Test command reports the supported range of values for parameters: **<port>,<mode>,<baudrate>,<protocol>**
Note	Available in "controlled mode" only This command is available for MediaTek MT3333-based GNSS modules (e.g. SL871) only, i.e. whenever is AT$GPSD=6.

3.5.7.18.3. GNSS General Management

3.5.7.18.3.1. GPS Software Version - $GPSSW

$GPSSW - GPS Software Version	**SELINT 2**
AT$GPSSW	Execution command returns the GNSS module software version in the format: **$GPSSW: <sw version>**
AT$GPSSW?	Read command has the same meaning as the Execution command
AT$GPSSW=?	Test command returns the **OK** result code
Example	For SiRF IV-based modules (e.g. JF2, JN3 and GE864-GPS): AT$GPSSW $GPSSW: GSD4e_4.0.2-P1 05/26/2010 146 OK For STM TeseoII-based modules (e.g. SL869 and GE910-GNSS): AT$GPSSW $GPSSW: SL869 v3.0.0.1 -STD -N96 OK For SiRF V-based modules (e.g. SE868-V2): AT$GPSSW $GPSSW: 5xp__5.5.2-R32+5xpt_5.5.2-R32 OK

$GPSSW - GPS Software Version	SELINT 2
	For MT3333-based modules (e.g. SL871): AT$GPSSW $GPSSW: AXN_3.60_3333_14080800,C012,MT33-1.,1.106 OK
Note	The command is available in “controlled mode” only The GNSS Module software version is available in few seconds at first GPS module startup

3.5.7.18.3.2. GPS Reset - $GPSR

$GPSR - GPS Reset	SELINT 2
AT$GPSR=<reset_type>	Execution command allows resetting the GNSS controller. 0 – Factory reset: this option clears all the GNSS memory including Clock Drift, Extended Ephemeris files stored into flash memory and applied software patch in case a ROM-based receiver is being used. 1 – Coldstart (No Almanac, No Ephemeris): this option clears all data that is currently stored in the internal memory of the GNSS receiver including Last Position, Almanac, Ephemeris and Time. However, the stored Clock Drift and Extended Ephemeris are retained. 2 – Warmstart (No ephemeris): this option clears Ephemeris and Last Position only. Almanac and Extended Ephemeris are retained. 3 – Hotstart (with stored Almanac and Ephemeris): the GNSS receiver restarts by using all data that is currently stored in the internal memory of the GNSS receiver: valid Almanac, Ephemeris and Extended Ephemeris are therefore retained and used.
AT$GPSR=?	Test command reports the range of supported values for parameter **<reset_type>**
Example	AT$GPSR=0 OK
Note	The command is available in “controlled mode” only This command must be issued only when the GNSS receiver is operating in Full Power Mode (see $GPSPS), otherwise it might have no effect Since the Factory Reset (**<reset_type>=0**) performs a hardware reconfiguration of the GNSS receiver, the issuing of two consecutive **AT$GPSR** commands should be avoided, otherwise the reconfiguration might fail: an **ERROR** is returned in the latter case

3.5.7.18.3.3. Direct Access to GPS Module - $GPSCON

$GPSCON - Direct Access to GPS Module	SELINT 2

$GPSCON - Direct Access to GPS Module	SELINT 2
AT$GPSCON	Execution command allows setting the GSM baseband in transparent mode in order to have a direct access to the serial port of the GNSS module. The GSM module will directly transfer the received data to the GNSS module (and vice-versa), without checking or elaborating it. Note: the command can be used in "controlled mode" only. Note: in case of an incoming call from GSM, this will be visible on the RING pin of serial port. Note: the escape sequence is "+++" The suggested Serial Port Speed for SirfIV-based modules (e.g. JF2 and JN3) is 57600. The suggested Serial Port Speed for SirfV-based modules (e.g. SE868-V2) is 115200.
AT$GPSCON=?	Test command returns the **OK** result code

3.5.7.18.4. GNSS Positioning Information

3.5.7.18.4.1. Unsolicited NMEA Data Configuration - $GPSNMUN

$GPSNMUN - Unsolicited NMEA Data Configuration	SELINT 2
AT$GPSNMUN= **<enable>** **[,<GGA>,<GLL>,** **<GSA>,<GSV>,** **<RMC>,<VTG >]**	Set command allows to activate an Unsolicited stream of GNSS data (in NMEA format) through the standard cellular module serial port and defines which NMEA sentences will be relayed Parameters: **<enable>** 0 - NMEA data stream de-activated (default) 1 - NMEA data stream activated with the following unsolicited response syntax: **$GPSNMUN: <NMEA SENTENCE><CR>** 2 - NMEA data stream activated with the following unsolicited response syntax: **<NMEA SENTENCE><CR>** 3 - dedicated NMEA data stream; it is not possible to send AT commands; with the escape sequence '+++' the user can return to command mode **<GGA>** - Global Positioning System Fix Data 0 - disable (default) 1 - enable **<GLL>** - Geographic Position - Latitude/Longitude 0 - disable (default)

	1 - enable **<GSA>** - GNSS DOP and Active Satellites 0 - disable (default) 1 - enable **<GSV>** - GNSS Satellites in View 0 - disable (default) 1 - enable **<RMC>** - Recommended Minimum Specific GNSS Data 0 - disable (default) 1 - enable **<VTG>** - GNSS Course Over Ground and Ground Speed 0 - disable (default) 1 – enable
AT$GPSNMUN?	Read command returns whether the unsolicited GNSS NMEA data stream is currently enabled or not, along with the current NMEA mask configuration, in the format: **$GPSNMUN:<enable>,<GGA>,<GLL>,<GSA>,<GSV>,<RMC>,<VTG >**
AT$GPSNMUN=?	Test command returns the supported range of values for parameters **<enable>, <GGA>, <GLL>, <GSA>, <GSV>, <RMC>, <VTG>**
Example	*Set the GSA as available sentence in the unsolicited message:* AT$GPSNMUN=2,0,0,1,0,0,0 OK *Turn-off the unsolicited mode:* AT$GPSNMUN=0 OK *Read the current NMEA mask configuration:* AT$GPSNMUN? $GPSNMUN: 2,0,0,1,0,0,0 OK *The unsolicited message will be:* $GPGSA,A,3,23,20,24,07,13,04,02,,,,,,2.4,1.6,1.8*3C
Reference	For products without built-in GNSS receiver (see the Note section below) NMEA 0183 Specifications

Note	For products without built-in GNSS receiver: *The command is available in "Controlled Mode" only* *The available NMEA sentences and their talker (GN, GP and GL) depend on the GNSS receiver used and its firmware configuration.* *Please refer to the Software Application Note of the GNSS receiver used for further information on the available NMEA data set.* SirfIV-based GNSS modules (e.g. JF2, JN3): *The fields PDOP and VDOP are not available* Products without built-in GNSS receiver are: HE910-D, HE910-EUD, HE910-EUR, HE910-NAD, HE910-NAR, UE910-EUD, UE910-EUR, UE910-NAR, UE910-NAD, UL865-EUR, UL865-EUD, UL865-NAR, UL865-NAD.

3.5.7.18.4.2. Get Acquired Position - $GPSACP

$GPSACP - Get Acquired Position	**SELINT 2**
AT$GPSACP	Execution command returns information about the last GPS position in the format: **$GPSACP: <UTC>,<latitude>,<longitude>,<hdop>,<altitude>,** **<fix>,<cog>,<spkm>,<spkn>,<date>,<nsat>** where: **<UTC>** - UTC time (hhmmss.sss) referred to GGA sentence **<latitude>** - format is ddmm.mmmm N/S (referred to GGA sentence) where: dd - degrees 00..90 mm.mmmm - minutes 00.0000..59.9999 N/S: North / South **<longitude>** - format is dddmm.mmmm E/W (referred to GGA sentence) where: ddd - degrees 000..180 mm.mmmm - minutes 00.0000..59.9999 E/W: East / West **<hdop>** - x.x - Horizontal Diluition of Precision (referred to GGA sentence) **<altitude>** - x.x Altitude - mean-sea-level (geoid) in meters (referred to GGA sentence) **<fix>** -

$GPSACP - Get Acquired Position	SELINT 2
	0 - Invalid Fix 2 - 2D fix 3 - 3D fix <**cog**> - ddd.mm - Course over Ground (degrees, True) (referred to VTG sentence) where: ddd - degrees 000..360 mm - minutes 00..59 <**spkm**> - x.x Speed over ground (Km/hr) (referred to VTG sentence) <**spkn**> - x.x- Speed over ground (knots) (referred to VTG sentence) <**date**> - ddmmyy Date of Fix (referred to RMC sentence) where: dd - day 01..31 mm - month 01..12 yy - year 00..99 - 2000 to 2099 <**nsat**> - nn - Total number of satellites in use (referred to GGA sentence) 00..12
AT$GPSACP?	Read command has the same meaning as the Execution command
AT$GPSACP=?	Test command returns the **OK** result code
Example	AT$GPSACP $GPSACP:080220.479,4542.82691N,01344.26820E,259.07,3,2.1,0.1,0.0,0.0,270705,09 OK
Note	If the GNSS receiver is turned off or its serial line is not physically connected to the GSM, the answer might be empty as shown below. AT$GPSACP $GPSACP: OK GE910-GNSS only: since latitude and longitude fields are taken from the $GPGGA5 NMEA sentence, they are reported in the format DDMM.MMMMM.

3.5.7.18.5. GNSS SiRFInstantFix™

3.5.7.18.5.1. GPS SiRFInstantFix™ - $GPSIFIX

$GPSIFIX – GPS SiRFInstantFix™	SELINT 2
AT$GPSIFIX=	Set command enables/disables SiRFInstantFix™ feature available on

<enable>[, **<cgee>,** **<sgee>[,** **<update>]]**	SiRF StarIV based modules. Parameters: **<enable>** - SiRFInstantFix Usage 0 – Disable (default) 1 – Enable **<cgee>** - Client Generated Extended Ephemeris (CGEE) 0 – Disable 1 – Enable (default) **<sgee>** - Server Generated Extended Ephemeris (SGEE) 0 – Disable (default) 1 – Enable **<update>** - SGEE File Update Mode 0 – Upon Aiding Data Requests coming from GPS chip 1..168 – Update rate in hours (168 is the max update rate in case of 7-days SGEE files usage) Note: SiRFInstantFix parameters are stored in NVM, along with all current GPS parameters, if **OK** is returned (same as AT$GPSSAV) Note: if **<enable>=0,** the rest of parameters must be omitted otherwise **ERROR** is returned Note: if **<enable>=1** and the rest of parameters is omitted, the default configuration, or a previous stored one, is used Note: if **<sgee>=1**, the **<update>** parameter must be set otherwise **ERROR** is returned Note: if **<sgee>=1** the following URC is used to warn, according to the **<update>** value, that the SGEE file has to be updated: *$SIFIXEV: SGEE File Update Requested* Note: If **<sgee>=0,** the **<update>** parameter must be omitted otherwise **ERROR** is returned Note: SiRFInstantFix default configuration may be restored by issuing the AT$GPSRST command
AT$GPSIFIX?	Read command reports the currently selected SiRFInstantFix configuration in the format: **$GPSIFIX: <enable>[,<cgee>,<sgee>[,<update>]]**
AT$GPSIFIX=?	Test command reports the supported range of values for parameters **<enable>, <cgee>, <sgee>,<update>**
Example	AT$GPSIFIX=0 OK AT$GPSIFIX=1,1,0 OK

Note	The Command is available in “Controlled Mode” only

3.5.7.18.5.2. GNSS SiRFInstantFix™ - $GNSSIFIX

$GNSSIFIX – GNSS SiRFInstantFix™	**SELINT 2**
AT$GNSSIFIX= **<navsystem>,** **<cgee>,** **<sgee>**	Set command enables/disables the SiRFInstantFix™ feature available on SiRF StarV-based GNSS modules. Parameters: **<navsystem>** - Constellation for which the SiRFInstantFix™ feature has to be enabled 0 – GPS 1 – GLONASS **<cgee>** - Client Generated Extended Ephemeris (CGEE) 0 – Disable 1 – Enable **<sgee>** - Server Generated Extended Ephemeris (SGEE) 0 – Disable 1 – Enable Note: SE868-V2 firmware comes with CGEE and SGEE enabled by default for both GPS and GLONASS constellations. Note: if **<sgee>=1** the following URC is used to warn, according to the **<navsystem>** value, that the SGEE file has to be updated: - For GPS *$SIFIXEV: GPS SGEE File Update Requested* - For GLONASS *$SIFIXEV: GLONASS SGEE File Update Requested*
AT$GNSSIFIX?	Read command reports the current SiRFInstantFix™ configuration, for both GPS and GLONASS, in the format: **$GNSSIFIX: 0,<cgee>,<sgee>** **$GNSSIFIX: 1,<cgee>,<sgee>**
AT$GNSSIFIX=?	Test command reports the supported range of values for parameters **<navsystem>, <cgee>, <sgee>**
Example	AT$GNSSIFIX=0,1,0 OK AT$GNSSIFIX=1,1,1 OK

Note	The Command is available in “Controlled Mode” only

3.5.7.18.5.3. Get SGEE File for SiRFInstantFix™ - $FTPGETIFIX

$FTPGETIFIX – Get SGEE File for SiRFInstantFix™	**SELINT 2**
AT$FTPGETIFIX= <filename>, <filesize> [,<navsystem>]	Execution command, issued during an FTP connection, opens a data connection, downloads a SGEE file from the FTP server and injects it into SiRF StarIV or StarV GNSS receiver. Parameters: **<filename>** - file name, string type **<filesize>** - SGEE file size in bytes **<navsystem>** - Constellation for which the SGEE file has to be downloaded and injected 0 – GPS (default) 1 – GLONASS Note: whenever an FTP connection has not been opened yet, an **ERROR** result code is returned Note: whenever an error happens during the SGEE file injection stage, an **ERROR** result code is returned In this case the possible *<err>* values reported by *+CME ERROR* (numeric format followed by verbose format) may be: 920 SGEE update initialization stage failed 921 SGEE file is not newer than the last stored one 922 SGEE update generic error 923 SGEE file open error Note: The command closure should always be handled by the customer application. In order to avoid download stall situations a timeout should be implemented by the application. Note: the **<navsystem>** parameter has a meaning for Sirf StarV-based receivers (e.g. SE868-V2) only; if omitted, the default value will be used (GPS). Therefore, when a Sirf StarIV-based receiver is used, the **<navsystem>** parameter is accepted but it does not have any effect.
AT$FTPGETIFIX=?	Test command returns the **OK** result code
Example	AT$FTPGETIFIX="packedDifference.f2p3enc.ee",30970 OK AT$FTPGETIFIX="packedDifference.f2p1enc.ee",10742 +CME ERROR: SGEE file is not newer than the last stored one

Note	The Command is available in “Controlled Mode” only

3.5.7.18.5.4. Get SGEE File for SiRFInstantFix™ - $HTTPGETIFIX

$HTTPGETIFIX – Get SGEE File for SiRFInstantFix™	**SELINT 2**
AT$HTTPGETIFIX= **< prof_id >,** **<filesize>** **[,<navsystem>]**	Execution command, issued during an HTTP connection, downloads a SGEE file from the HTTP server and injects it into the SiRF StarIV or StarV GNSS receiver, after a HTTP query using a specific Profile Id, GET option, SGEE file name has been sent. Parameters: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **<filesize>** - SGEE file size in bytes **<navsystem>** - Constellation for which the SGEE file has to be downloaded and injected 0 – GPS (default) 1 – GLONASS Note: whenever an HTTP configuration has not been done yet, an **ERROR** result code is returned Note: whenever an error happens during the SGEE file injection stage, an **ERROR** result code is returned In this case the possible *<err>* values reported by *+CME ERROR* (numeric format followed by verbose format) may be: 920 SGEE update initialization stage failed 921 SGEE file is not newer than the last stored one 922 SGEE update generic error 923 SGEE file open error Note: the **<navsystem>** parameter has a meaning for Sirf StarV-based receivers (e.g. SE868-V2) only; if omitted, the default value will be used (GPS). Therefore, when a Sirf StarIV-based receiver is used, the **<navsystem>** parameter is accepted but it does not have any effect.
AT$HTTPGETIFIX=?	Test command returns the **OK** result code
Example	AT$HTTPGETIFIX=0,30970 OK AT$HTTPGETIFIX=0,10742 +CME ERROR: SGEE file is not newer than the last stored one
Note	The Command is available in “Controlled Mode” only

3.5.7.18.6. GNSS Patch Management

3.5.7.18.6.1. Write Patch on flash - $WPATCH

$WPATCH – Write Patch on flash	SELINT 2
AT$WPATCH=<patch_file_name>,<size>	Execution command allows storing a SiRF software patch onto the module's flash memory. The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: Flow control: hardware. Baud rate: 115200 bps Parameters: **<patch_file_name>** - name of the file in NVM, string type (max 16 chars, case sensitive). **<size>** - file size in bytes The device shall prompt a three character sequence <greater_than><greater_than><greater_than> (IRA 62, 62, 62) then the command line is terminated with a <CR>; after that a file can be sent from TE, sized <size> bytes. The operations completes when all the bytes are received. If writing ends successfully, the response is OK; otherwise an error code is reported. Note: This command can be used with SIRF ROM-based GPS modules only (**AT$GPSD=2,1**, **AT$GPSD=2,2, AT$GPSD=3,1, AT$GPSD=3,2 or AT$GPSD=5,2**). Note: The patch file must have a "**.pd2**" or "**.pd3**" (AT$GPSD=5,2) extension.
AT$WPATCH=?	Test command returns the **OK** result code

Example	`AT$WPATCH = "GSD4E_4.1.2.pd2",5472`
	`>>> here receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then type or send the patch, sized 54 bytes`
	`OK`
	
	`Patch has been stored.`

3.5.7.18.6.2. Enable Patch - $EPATCH

$EPATCH – Enable Patch	SELINT 2

$EPATCH – Enable Patch	SELINT 2
AT$EPATCH= [<patch_file_name>]	Execution command allows enabling the usage of the SiRF software patch saved onto the module's flash memory. Parameters: **<patch_file_name>** - name of the file in NVM, string type (**max 16 chars, case sensitive**). The execution command returns OK but the patching is confirmed by the following unsolicited: - *"Patch Manager: Patched"* Other unsolicited messages can be due to errors occurred during the patching procedure or patch storage errors: -*"Patch Manager: Error opening Patch File"* -*"Patch Manager: Error processing Patch File"* -*"Patch Manager: Error on Start Request"* -*"Patch Manager: Error on Load Request"* -*"Patch Manager: Error on Exit Request"* Note: This command can be used with SIRF ROM-based GNSS modules only (**AT$GPSD=2,1**, **AT$GPSD=2,2, AT$GPSD=3,1, AT$GPSD=3,2 or AT$GPSD=5,2**). Note: The patch file must have a **".pd2"** or "**pd.3**" (AT$GPSD=5,2) extension. Note: A previously applied patch can be removed from the GNSS Patch RAM by issuing a Factory Reset or by powering the GNSS module down and removing the VBatt. However, if automatic patch application hasn't been disabled, the patch will be automatically reapplied. Note: If the **<patch_file_name>** is omitted, the automatic patch application, at the next startup of the cellular module, is disabled. However, the current patch remains applied until it will be not removed as explained above. Note: The configuration specified through AT$EPATCH can be saved by means of the **AT$GPSSAV** command. Note: "**AT$EPATCH**" command returns **ERROR**.
AT$EPATCH?	Read command display the patch in use in the format: **$EPATCH: <patch_file_name>**
AT$EPATCH=?	Test command returns the **OK** result code

$EPATCH – Enable Patch	SELINT 2
Example	AT$EPATCH = "GSD4E_4.1.2.pd2" OK Patch Manager: Patched. -The SiRF GNSS module has been patched

3.5.7.18.6.3. List Available Patch - $LPATCH

$LPATCH – List Available Patch	SELINT 2
AT$LPATCH	Execution command displays the available SiRF software patch saved onto the module's flash memory. Note: This command can be used with SIRF ROM-based GPS modules only (**AT$GPSD=2,1**, **AT$GPSD=2,2, AT$GPSD=3,1, AT$GPSD=3,2 or AT$GPSD=5,2**). Note: The patch file must have a "**.pd2**" or "**.pd3**" (AT$GPSD=5,2) extension.
AT$LPATCH=?	Test command returns the **OK** result code
Example	AT$LPATCH $LPATCH: "GSD4E_4.1.2.pd2",5472 OK

3.5.7.18.6.4. Delete Patch from NVM - $DPATCH

$DPATCH – Delete Patch from NVM	SELINT 2
AT$DPATCH= <patch_file_name>	Execution command deletes a SiRF software patch stored onto the module's flash memory. Parameters: **<patch_file_name>** - name of the file in NVM, string type (max 16 chars, case sensitive). The execution command returns OK. Note: This command can be used with SIRF ROM-based GNSS modules only (**AT$GPSD=2,1, AT$GPSD=2,2, AT$GPSD=3,1 AT$GPSD=3,2 or AT$GPSD=5,2**).
AT$DPATCH=?	Test command returns the **OK** result code
Example	AT$DPATCH = "GSD4E_4.1.2.pd2" OK

$DPATCH – Delete Patch from NVM	SELINT 2

3.5.7.18.7. GNSS ST-AGPS™

3.5.7.18.7.1. Enable STAGPSTM Usage - $GPSSTAGPS

$GPSSTAGPS – Enable STAGPS™ Usage	SELINT 2
AT$GPSSTAGPS= <enable>	Set command enables/disables the STAGPS™ feature available on ST TESEOII-based GNSS modules. Parameters: **<enable>:** 0 – Disable 1 – Enable Note: This command can be used with ST TESEOII-based GNSS modules only (**AT$GPSD=4**). Note: Since the current STAGPS™ configuration is not saved in NVM this command has to be issued at every power-cycle of both the GNSS receiver and the GSM module.
AT$GPSSTAGPS?	Read command reports the currently selected STAGPS™ configuration in the format: **$GPSSTAGPS: <enable>**
AT$GPSSTAGPS=?	Test command reports the supported range of values for parameter **<enable>**

3.5.7.18.7.2. Get ST-AGPS™ seed file for ST-AGPS - $HTTPGETSTSEED

$HTTPGETSTSEED – Get ST-AGPS seed file for ST-AGPS™	SELINT 2
AT$HTTPGETSTSEED= <prof_id>, <filesize>	Execution command, issued during a HTTP connection, downloads a ST-AGPS seed file from the HTTP server and creates a decoded version of the file itself. The decoded seed file, is stored onto the module's NVM and can be injected later on by means of the AT$INJECTSTSEED command. The ST-AGPS seed file size must be retrieved, before issuing the AT$HTTPGETSTSEED command, by sending a HTTP query using a specific Profile Id, GET option and the ST-AGPS seed file name. Parameters: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **<filesize>** - ST-AGPS seed file size in bytes Note: whenever an HTTP configuration has not been done yet, an **ERROR** result code is returned
AT$HTTPGETSTSEED=?	Test command returns the **OK** result code

Example	AT$HTTPGETSTSEED=0,2199 OK
Note	The Command is available in “Controlled Mode” only

3.5.7.18.7.3. Inject decoded ST-AGPS seed file - $INJECTSTSEED

$INJECTSTSEED – Inject decoded ST-AGPS seed file	**SELINT 2**
AT$INJECTSTSEED	Execution command injects a decoded ST-AGPS seed, previously downloaded and stored onto the module's NVM, into TESEOII-based GNSS receivers. Note: whenever an error happens during the decoded ST-AGPS seed file injection stage, an ERROR result code is returned In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be: 970 STAGPS Seed file open error 971 STAGPS Seed file exceeds the maximum allowed one 972 STAGPS pre-configuration error 973 STAGPS seed injection error 974 STAGPS re-configuration error Note: a decoded ST-AGPS seed can be injected only if the GNSS receiver has a valid UTC time from a previous fix, i.e. it is in a warm start condition.
AT$INJECTSTSEED=?	Test command returns the **OK** result code
Note	The command is available in “Controlled Mode” only

3.5.7.18.8. GNSS MTK EPO

3.5.7.18.8.1. Get EPO file for MT EPO Aiding - $HTTPGETEPO

$HTTPGETEPO – Get EPO file for MT EPO Aiding	SELINT 2
AT$HTTPGETEPO= <prof_id>, <filesize>	Execution command, issued during a HTTP connection, downloads an EPO file from the HTTP server and stores it on the cellular module's NVM for future use. The EPO file can be injected later on by means of the AT$INJECTEPO command. The EPO file size must be retrieved, before issuing the AT$HTTPGETEPO command, by sending a HTTP query using a specific Profile Id, GET option and the EPO file name. Parameters: **<prof_id>** - Numeric parameter indicating the profile identifier. Range: 0-2 **<filesize>** - EPO file size in bytes Note: whenever a HTTP configuration has not been done yet, an **ERROR** result code is returned
AT$HTTPGETEPO=?	Test command returns the **OK** result code
Example	AT$HTTPGETEPO=0,129024 OK
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6.

3.5.7.18.8.2. Inject EPO Aiding file - $INJECTEPO

$INJECTEPO – Inject EPO Aiding file	SELINT 2
AT$INJECTEPO	Execution command injects an EPO file, previously downloaded and stored onto the cellular module's NVM, into MT3333-based GNSS receivers (e.g. SL871). Note: whenever an error happens during the EPO file injection stage, an ERROR result code is returned In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be: 980 GNSS file open error 985 Invalid EPO file 986 EPO MTK binary configuration error 987 EPO injection error

	988 EPO NMEA configuration error Note: only EPO files up to 14-days validity are currently supported. Therefore, if a 30-days EPO file is used, only data for the first 14 days will be injected.
AT$INJECTEPO=?	Test command returns the **OK** result code
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6.

3.5.7.18.8.3. Query EPO Data Status - $QUERYEPO

$QUERYEPO – Query EPO Data Status	**SELINT 2**
AT$QUERYEPO	Execution command queries the EPO data status, in MT3333-based GNSS receivers (e.g. SL871), whose answer will be in the form: **$QUERYEPO: <SET>,<FWN>,<FTOW>,<LWN>,<LTOW>, <FCWN>,<FCTOW>,<LCWN>,<LCTOW>** Where: **<SET>** - Total number of EPO data set stored into the GNSS receiver. The EPO prediction for one day is made up of 4 EPO data sets. **<FWN>** - GPS week number of the first set of EPO data stored into the GNSS receiver. **<FTOW>** - GPS TOW of the first set of EPO data stored into the GNSS receiver. **<LWN>** - GPS week number of the last set of EPO data stored into the GNSS receiver. **<LTOW>** - GPS TOW of the last set of EPO data stored into the GNSS receiver. **<FCWN>** - GPS week number of the first set of EPO data currently used. **<FCTOW>** - GPS TOW of the first set of EPO data currently used. **<LCWN>** - GPS week number of the last set of EPO data currently used. **<LCTOW>** - GPS TOW of the last set of EPO data currently used.
AT$QUERYEPO=?	Test command returns the **OK** result code
Example	AT$QUERYEPO $QUERYEPO: 56,1832,259200,1834,237600,1832,367200,1832,367200 OK
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6.

3.5.7.18.8.4. Delet EPO Data - $CLEAREPO

$CLEAREPO – Delete EPO Data	SELINT 2
AT$CLEAREPO	Execution command deletes all the EPO data from MT3333-based GNSS receivers (e.g. SL871).
AT$CLEAREPO=?	Test command returns the **OK** result code
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6.

3.5.7.18.8.5. Enable EASY - $EASY

$EASY – Enable EASY	SELINT 2
AT$EASY=<enable>	Set command allows enabling or disabling the EASY feature on MT3333-based GNSS receivers (e.g. SL871). Parameters: **<enable>** - Enable/Disable the EASY feature 0 – Disable 1 – Enable
AT$EASY?	Read command reports the current EASY status in the format: **$EASY: <enable>,<extension_day>** Where: **<extension_day>** - Number of days for which the prediction has been already done 0 – EASY enabled and prediction not finished yet or not available 1..3 – EASY enabled and prediction finished for 1, 2 and 3 days respectively
AT$EASY=?	Test command reports the range of supported values for parameter **<enable>**
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT$GPSD=6. The EASY feature is supported starting from SL871 firmware version AXN_3.60_3333_14080800,C012,MT33-1.,1.106 The default EASY configuration depends on the specific SL871 firmware version used.

3.5.7.18.8.6. GNSS 5Hz Navigation Mode - $GNSS5HZ

$GNSS5HZ – GNSS 5Hz Navigation Mode	SELINT 2
AT$GNSS5HZ=<mode>	Set command allows enabling the 5Hz Navigation Mode on a SiRFStar V Flash-based GNSS receiver (e.g. SE868-V3). Parameter: **<mode>** 0 – Disable 5Hz Navigation Mode (default) 1 – Enable 5Hz Navigation Mode
AT$GNSS5HZ?	Read command reports the current value of the **<mode>** parameter, in the format: **$GNSS5HZ: <mode>**
AT$GNSS5HZ=?	Test command reports the range of supported values for parameter **<mode>**
Note	The command is available in “Controlled Mode” only

3.5.7.18.8.7. GNSS Estimated Position Errors - $GNSSEPE

$GNSSEPE – GNSS Estimated Position Errors	SELINT 2
AT$GNSSEPE?	Read command reports the Estimated Horizontal and Vertical Position Errors for the last GNSS position fix, for SiRF StarIV and SiRF StarV based GNSS receivers, in the format: **$GNSSEPE: <ehpe>,<evpe>** Where: **<ehpe>** - Estimated Horizontal Position Error in meters **<evpe>** - Estimated Vertical Position Error in meters
AT$GNSSEPE=?	Test command returns the **OK** result code
Note	The command is available in “Controlled Mode” only If a GNSS position fix has not been got yet, the answer will be as follows: **AT$GNSSEPE?** **$GNSSEPE: 0.00,0.00** **OK**

3.5.7.19. SAP AT Commands Set

3.5.7.19.1. Remote SIM Enable - #RSEN

#RSEN – Remote SIM Enable	SELINT 2
AT#RSEN=<mode>[,<sapformat>[,<role>	Set command is used to enable/disable the **Remote SIM** feature. The command returns **ERROR** if requested on a non multiplexed interface

#RSEN – Remote SIM Enable	SELINT 2
[,<muxch> **[,<beacon>** **[,<scriptmode>]]]]]**	Parameter: **<mode>** 0 - disable 1 - enable **<sapformat>** 1 - binary SAP (default) **<role>** 0 - remote SIM Client (default) • *If the ME doesn't support the Easy Script Extension®* or • ***<scriptmode>*** *is omitted or* • ***<scriptmode>*** *is 0* **<muxch>** - MUX Channel Number; mandatory if **<mode>=1** 1..3 *If the ME support the Easy Script Extension®* and ***<scriptmode>*** *is 1* **<muxch>** - MDM interface number in scripts; mandatory if **<mode>=1** 1 - MDM interface 2 - MDM2 interface **<beacon>** - retransmition timer of SAP Connection Request 0 - only one transmition (default) 1..100 - timer interval in seconds. **<scriptmode>** - script mode enable; setting this subparameter has a meaning only if the ME supports the Easy Script® Extension 0 - disable script mode (see subparameter **<muxch>**) 1 - enable script mode (see subparameter **<muxch>**) Note: enabling the **Remote SIM** feature when the SIM is already inserted causes the module to: • de-register from the actual network • de-initialize the current SIM. Note: issuing the command on a not multiplexed interface (see **+CMUX**) cause an **ERROR** to be raised in all the situations except when: • the ME supports the Easy Script Extension® and • **<scriptmode>** is 1 Note: if the **Remote SIM** feature has been activated the SAP connection status is signalled with the following URC: **#RSEN: <conn>** where **<conn>** - connection status

#RSEN – Remote SIM Enable		SELINT 2
	0 - disconnected 1 - connected	
AT#RSEN?	Read command returns the SAP connection status in the format: **#RSEN: <conn>** where **<conn>** - connection status, as before	
AT#RSEN=?	Test command reports the range of values for all the parameters.	

3.5.7.20. Telefonica OpenGate M2M AT Commands Set

For more detailed information about the AT commands dedicated for Telefonica Open Gate M2M protocol handling please consult the OpenGate M2M Protocol User Guide.

3.5.7.21. Audio Commands

These are not the only audio commands available. See par. 3.5.4.4.

3.5.7.21.1. Audio Basic configuration

3.5.7.21.1.1. Change Audio Path - #CAP

#CAP - Change Audio Path		SELINT 0 / 1
AT#CAP[=[<n>]]	Set command switches the active audio path depending on parameter **<n>** Parameter: **<n>** - audio path 0 - audio path follows the **AXE** input (factory default): • if **AXE** is low, handsfree is enabled; • if **AXE** is high, internal path is enabled 1 - enables handsfree external mic/ear audio path 2 - enables internal mic/ear audio path Note: The audio path are mutually exclusive, enabling one disables the other. Note: when changing the audio path, the volume level is set at the previously stored value for that audio path (see **+CLVL**). Note: issuing **AT#CAP<CR>** is the same as issuing the Read command. Note: issuing **AT#CAP=<CR>** is the same as issuing the command **AT#CAP=0<CR>**.	

#CAP - Change Audio Path		SELINT 0 / 1
AT#CAP?	Read command reports the active audio path in the format: **#CAP: <n>**.	
AT#CAP=?	Test command reports the supported values for the parameter **<n>**.	

#CAP – Change Audio Path		SELINT 2
AT#CAP[=[<n>]]	Set command switches the active audio path depending on parameter **<n>** Parameter: **<n>** - audio path 0 - audio path follows the **AXE** input (factory default): • if **AXE** is low, handsfree is enabled; • if **AXE** is high, internal path is enabled 1 - enables handsfree external mic/ear audio path 2 - enables internal mic/ear audio path Note: The audio path are mutually exclusive, enabling one disables the other. Note: when changing the audio path, the volume level is set at the previously stored value for that audio path (see **+CLVL**). Note: #CAP=1 is not available for GE865-QUAD despite it is accepted, because GE865-QUAD has only one audio path. Note: #CAP=2 on the modules GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GE866-QUAD and GE910-QUAD V3 disables the Class-D audio output and switches to Class-AB audio output.	
AT#CAP?	Read command reports the active audio path in the format: **#CAP: <n>**.	
AT#CAP=?	Test command reports the supported values for the parameter **<n>**.	

3.5.7.21.1.2. AXE Pin Reading - #AXE

#AXE - AXE Pin Reading		SELINT 2
AT#AXE	Execution command causes the ME to return the current state of **AXE** pin in the format: **#AXE: <state>** where: **<state>** 0 - **Low** ..1 - **High**	

#AXE - AXE Pin Reading	SELINT 2
AT#AXE=?	Test command returns the **OK** result code.

3.5.7.21.1.3. Select Ringer Sound - #SRS

#SRS - Select Ringer Sound	SELINT 0 / 1
AT#SRS[=<n>,<tout>]	Set command sets the ringer sound. Parameters: **<n>** - ringing tone 0 - current ringing tone 1..*max* - ringing tone number, where *max* can be read by issuing the Test command **AT#SRS=?**. **<tout>** - ringing tone playing time-out in seconds. 0 - ringer is stopped (if present) and current ringer sound is set. 1..60 - ringer sound playing for **<tout>** seconds and, if **<n>** > **0,** ringer sound **<n>** is set as default ringer sound. Note: when the command is issued with **<n>** > **0** and **<tout>** > **0**, the **<n>** ringing tone is played for **<tout>** seconds and stored as default ringing tone. Note: if command is issued with **<n>** > **0** and **<tout>** = **0**, the playing of the ringing is stopped (if present) and **<n>** ringing tone is set as current. Note: if command is issued with **<n>** = **0** and **<tout>** > **0** then the current ringing tone is played. Note: if both **<n>** and **<tout>** are **0** then the default ringing tone is set as current and ringing is stopped. Note: If all parameters are omitted then the behaviour of Set command is the same as Read command
AT#SRS?	Read command reports current selected ringing and its status in the form: **#SRS: <n>,<status>** where: **<n>** - ringing tone number 1..*max* **<status>** - ringing status 0 - selected but not playing 1 - currently playing
AT#SRS=?	Test command reports the supported values for the parameters **<n>** and **<tout>**

#SRS - Select Ringer Sound	SELINT 2
AT#SRS=[<n>,<tout>]	Set command sets the ringer sound.

#SRS - Select Ringer Sound	SELINT 2
	Parameters: **<n>** - ringing tone 0 - current ringing tone 1..*max* - ringing tone number, where *max* can be read by issuing the Test command **AT#SRS=?**. **<tout>** - ringing tone playing timer in units of seconds. 0 - ringer is stopped (if present) and current ringer sound is set. 1..60 - ringer sound playing for **<tout>** seconds and, if **<n> > 0,** ringer sound **<n>** is set as default ringer sound. Note: when the command is issued with **<n> > 0** and **<tout> > 0**, the **<n>** ringing tone is played for **<tout>** seconds and stored as default ringing tone. Note: if command is issued with **<n> > 0** and **<tout> = 0**, the playing of the ringing is stopped (if present) and **<n>** ringing tone is set as current. Note: if command is issued with **<n> = 0** and **<tout> > 0** then the current ringing tone is played for **<tout>** seconds. Note: if both **<n>** and **<tout>** are **0** then the default ringing tone is set as current and ringing is stopped. Note: If all parameters are omitted then the behaviour of Set command is the same as Read command
AT#SRS?	Read command reports current selected ringing and its status in the form: **#SRS: <n>,<status>** where: **<n>** - ringing tone number 1..*max* **<status>** - ringing status 0 - selected but not playing 1 - currently playing
AT#SRS=?	Test command reports the supported values for the parameters **<n>** and **<tout>**

3.5.7.21.1.4. Select Ringer Path - #SRP

#SRP - Select Ringer Path	SELINT 0 / 1
AT#SRP[=[<n>]]	Set command selects the ringer path towards whom sending ringer sounds and all signalling tones. Parameter: **<n>** - ringer path number 0 - sound output towards current selected audio path (see command **#CAP**)

#SRP - Select Ringer Path	SELINT 0 / 1
	1 - sound output towards handsfree 2 - sound output towards handset 3 - sound output towards Buzzer Output pin GPIO7 Note: In order to use the Buzzer Output an external circuitry must be added to drive it properly from the GPIO7 pin, furthermore the GPIO7 pin direction must be set to Buzzer output (Alternate function); see command **#GPIO**. Note: issuing **AT#SRP<CR>** is the same as issuing the Read command. Note: issuing **AT#SRP=<CR>** is the same as issuing the command **AT#SRP=0<CR>**.
AT#SRP?	Read command reports the selected ringer path in the format: **#SRP: <n>**.
AT#SRP=?	Test command reports the supported values for the parameter **<n>**.
Example	AT#SRP=? #SRP: (0-3) OK AT#SRP=3 OK

#SRP - Select Ringer Path	SELINT 2
AT#SRP=[<n>]	Set command selects the ringer path towards whom sending ringer sounds and all signalling tones. Parameter: **<n>** - ringer path number 0 - sound output towards current selected audio path (see command **#CAP**) 1 - sound output towards handsfree 2 - sound output towards handset (not available for GL865-DUAL, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO and GE910-GNSS) 3 - sound output towards Buzzer Output pin GPIO7 Note: In order to use the Buzzer Output an external circuitry must be added to drive it properly from the GPIO7 pin, furthermore the GPIO7 pin direction must be set to Buzzer output (Alternate function); see command **#GPIO.**
AT#SRP?	Read command reports the selected ringer path in the format: **#SRP: <n>**.
AT#SRP=?	Test command reports the supported values for the parameter **<n>**.
Example	AT#SRP=? #SRP: (0-3) OK

#SRP - Select Ringer Path		SELINT 2
	AT#SRP=3 OK	

3.5.7.21.1.5. Handsfree Microphone Gain - #HFMICG

#HFMICG - Handsfree Microphone Gain	SELINT 0 / 1
AT#HFMICG[=[<level>]]	Set command sets the handsfree microphone input gain Parameter: **<level>**: handsfree microphone input gain 0..7 - handsfree microphone gain (+6dB/step, factory default = 4) Note: issuing **AT#HFMICG<CR>** is the same as issuing the Read command. Note: issuing **AT#HFMICG=<CR>** returns the **OK** result code.
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format: **#HFMICG: <level>**
AT#HFMICG=?	Test command returns the supported range of values of parameter **<level>**.

#HFMICG - Handsfree Microphone Gain	SELINT 2
AT#HFMICG=[<level>]	Set command sets the handsfree microphone input gain Parameter: **<level>**: handsfree microphone input gain 0..7 - handsfree microphone gain (+6dB/step, factory default = 4)
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format: **#HFMICG: <level>**
AT#HFMICG=?	Test command returns the supported range of values of parameter **<level>**.

3.5.7.21.1.6. Analog Microphone Gain - #ANAMICG

#ANAMICG – Analog Microphone Gain	SELINT 2
AT#ANAMICG=<gain_level>	This command allows setting the microphone analog gain through 15 levels by 3 dB steps Parameters: <gain_level>: analog microphone gain 0..14 - analog microphone input gain (+3dB/step, factory default = 8)
AT#ANAMICG?	Read command returns the current analog microphone gain level, in the format: #ANAMICG: <gain_level>
AT#ANAMICG =?	Test command reports the supported range of values for parameters <gain_level>.

3.5.7.21.1.7. Digital Microphone Gain - #DIGMICG

#DIGMICG – Digital Microphone Gain	SELINT 2
AT#DIGMICG=<gain_level>	This command allows setting the microphone digital gain through 45 levels by 1 dB steps Parameters: <gain_level>: digital microphone input gain 1..45 - digital microphone input gain (+1dB/step, factory default = 33) <gain_level>: = 0 **Microphone is mute** NOTE: This command substitutes the #HSMICG command and has the same default value. NOTE: **AT#DIGMICG=45 introduces a gain of +12 dB** **AT#DIGMICG=33 introduces a gain of 0 dB** **AT#DIGMICG=0 Microphone is mute**
AT#DIGMICG?	Read command returns the current digital microphone gain level, in the format: #DIGMICG: <gain_level>
AT#DIGMICG =?	Test command reports the supported range of values for parameters <gain_level>.

3.5.7.21.1.8. Handset Microphone Gain - #HSMICG

#HSMICG - Handset Microphone Gain	SELINT 0 / 1
AT#HSMICG[= [<level>]]	Set command sets the handset microphone input gain Parameter: **<level>**: handset microphone input gain 0..7 - handset microphone gain (+6dB/step, factory default = 0) Note: issuing **AT#HSMICG<CR>** is the same as issuing the Read command. Note: issuing **AT#HSMICG=<CR>** returns the **OK** result code.
AT#HSMICG?	Read command returns the current handset microphone input gain, in the format: **#HSMICG: <level>**
AT#HSMICG=?	Test command returns the supported range of values of parameter **<level>**.

#HSMICG - Handset Microphone Gain	SELINT 2

#HSMICG - Handset Microphone Gain	SELINT 2
AT#HSMICG=[<level>]	Set command sets the handset microphone input gain Parameter: **<level>**: handset microphone input gain 0..7 - handset microphone gain (+6dB/step, factory default = 0)
AT#HSMICG?	Read command returns the current handset microphone input gain, in the format: **#HSMICG: <level>**
AT#HSMICG=?	Test command returns the supported range of values of parameter **<level>**.

3.5.7.21.1.9. Handsfree Receiver Gain - #HFRECG

#HFRECG - Handsfree Receiver Gain	SELINT 2
AT#HFRECG=<level>	Set command sets the handsfree analogue output gain Parameter: **<level>**: handsfree analogue output gain 0..6 - handsfree analogue output (-3dB/step, factory default = 0) *Note: This parameter is saved in NVM issuing AT&W command.*
AT#HFRECG?	Read command returns the current handsfree analog output gain, in the format: **#HFRECG: <level>**
AT#HFRECG =?	Test command returns the supported range of values of parameter **<level>**.

3.5.7.21.1.10. Handset Receiver Gain - #HSRECG

#HSRECG - Handset Receiver Gain	SELINT 2
AT#HSRECG=<level>	Set command sets the handset analogue output gain Parameter: **<level>**: handset analogue output gain 0..6 - handset analogue output (-3dB/step, default value = 0) *Note: This parameter is saved in NVM issuing AT&W command.*
AT#HSRECG?	Read command returns the current handset analog output gain, in the format: **#HSRECG: <level>**
AT#HSRECG =?	Test command returns the supported range of values of parameter **<level>**.

3.5.7.21.1.11. Set Headset Sidetone - #SHFSD

#SHFSD - Set Headset Sidetone	SELINT 0 / 1
AT#SHFSD[= [<mode>]]	Set command enables/disables the sidetone on headset audio output. Parameter: **<mode>** 0 - disables the headset sidetone (factory default) 1 - enables the headset sidetone. Note: This setting returns to default after power off. Note: issuing **AT#SHFSD<CR>** is the same as issuing the Read command. Note: issuing **AT#SHFSD=<CR>** is the same as issuing the command **AT#SHFSD=0<CR>**.
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled or not, in the format: **#SHFSD: <mode>**
AT#SHFSD=?	Test command returns the supported range of values of parameter **<mode>**.

#SHFSD - Set Headset Sidetone	SELINT 2
AT#SHFSD= [<mode>]	Set command enables/disables the sidetone on headset audio output. Parameter: **<mode>** 0 - disables the headset sidetone (factory default) 1 - enables the headset sidetone. Note: This setting returns to default after power off.
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled or not, in the format: **#SHFSD: <mode>**
AT#SHFSD=?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.1.12. Set Handset Sidetone - #SHSSD

#SHSSD - Set Handset Sidetone	SELINT 2
AT#SHSSD= <mode>	Set command enables/disables the sidetone on handset audio output. Parameter: **<mode>** 0 - disables the handset sidetone 1 - enables the handset sidetone (factory default)

#SHSSD - Set Handset Sidetone		SELINT 2
	Note: This parameter is saved in NVM issuing AT&W command.	
AT#SHSSD?	Read command reports whether the headset sidetone is currently enabled or not, in the format: **#SHSSD: <mode>**	
AT#SHSSD=?	Test command returns the supported range of values of parameter **<mode>**.	

3.5.7.21.1.13. Activation and gain setting of side tone - #SIDETG

#SIDETG – Activation and gain setting of side tone		SELINT 2
AT#SIDETG=<mode>[,<gain_level>]	This command enables/disables the sidetone and set the sidetone's digital gain through 46 levels by 1 dB steps. Parameters: **<mode>** 0 - disables sidetone 1 - enables sidetone **<gain_level>**: digital sidetone gain 0..45 - digital sidetone gain (+1dB/step, factory default=29) NOTE: Setting **<mode>** to 0, the **<gain_level>** parameter is not accepted. The **<mode>** default value changes respect to the product in use; changing audio path thanks to **AT#CAP** could change default value. Default value is strictly related to **AT#SHFSD** and **AT#SHSSD** commands, depending on which audio path is set.	
AT#SIDETG?	Read command reports the value of **<mode>** and **<gain_level>** parameters in the format: **#SIDETG: <mode>,<gain_level>**	
AT#SIDETG=?	Test command reports the supported range of values for **<mode>** and **<gain_level>** parameters.	

3.5.7.21.1.14. Speaker Mute Control - #SPKMUT

#SPKMUT - Speaker Mute Control		SELINT 2
AT#SPKMUT=<n>	Set command enables/disables the global muting of the speaker audio line, for every audio output (ring, incoming sms, voice, Network coverage) Parameter: **<n>** 0 - mute off, speaker active (factory default) 1 - mute on, speaker muted.	

#SPKMUT - Speaker Mute Control	SELINT 2
	Note: this command mutes/activates both speaker audio paths, internal speaker and external speaker.
AT#SPKMUT?	Read command reports whether the muting of the speaker audio line during a voice call is enabled or not, in the format: **#SPKMUT: <n>**
AT#SPKMUT=?	Test command reports the supported values for **<n>** parameter.

3.5.7.21.1.15. Open Audio Loop - #OAP

#OAP - Open Audio Loop	SELINT 2
AT#OAP=[<mode>]	Set command sets Open Audio Path. Parameter: 0 - disables Open Audio Path (default) 1 - enables Open Audio Path Note: the audio Loop will be activated on line select by the AXE pin or **#CAP** com mand.
AT#OAP?	Read command reports whether the Open Audio Path is currently enabled or not, in the format: **#OAP: <mode>**
AT#OAP=?	Test command returns the supported range of values of parameter **<mode>**.
Note	The audio loop will be established between microphone and speaker using sidetone scaling value.

3.5.7.21.1.16. HF Speaker Volume - #HFVOL

#HFVOL – HF Speaker Volume	SELINT 2
AT#HFVOL=<level>	This command sets the volume of the Loudspeaker. Parameter: **<level>** : 1…8 Each level corresponds to a Loudspeaker gain setting expressed in dB: 1 - HF gain = 0 dB 2 - HF gain = +3 dB 3 - HF gain = +6 dB 4 - HF gain = +9 dB (default for 16.0x.xxx SW version) 5 - HF gain = +12 dB 6 - HF gain = +15 dB (default for 13.0x.xxx SW version)

	7 - HF gain = +18 dB 8 - HF gain = +24 dB Note: You can use the command **AT#SPKMUT** to mute the audio path.
AT#HFVOL?	Read command returns the current settings in the format: **#HFVOL**: **<level >**
AT#HFVOL=?	Test command returns the supported range of parameter in the format: **#HFVOL**: **(list of supported <level>s)**
Example	AT#HFVOL=? # HFVOL: (1-8) OK AT#HFVOL=4 OK

3.5.7.21.1.17. Setting two frequency modes for buzzer - #BUZZERMODE

#BUZZERMODE – Sets two frequency modes for buzzer	**SELINT 2**
AT#BUZZERMODE=<mode>	Set two Buzzer Frequency Modes, slow and fast. Parameters: **<mode>** 0 – fast frequency (factory default for all products except GE864-QUAD and GC864-QUAD) 1 – frequency halved (factory default for GE864-QUAD and GC864-QUAD) Note: the value is automatically saved in NVM.
AT#BUZZERMODE?	Read command reports last setting, in the format: **#BUZZEMODE:<mode>**
AT#BUZZERMODE=?	Test command reports the range of supported values for parameter: **<mode>**

3.5.7.21.2. Tones configuration

3.5.7.21.2.1. Signaling Tones Mode - #STM

#STM - Signaling Tones Mode	**SELINT 0 / 1**
AT#STM [=<mode>]	Set command enables/disables the signaling tones output on the audio path selected with **#SRP** command Parameter: **<mode>** - signaling tones status 0 - signaling tones disabled 1 - signaling tones enabled Note: **AT#STM=0** has the same effect as **AT+CALM=2**; **AT#STM=1** has the same effect as **AT+CALM=0**. Note: If parameter is omitted then the behaviour of Set command is the same as Read command
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format: **#STM: <mode>**
AT#STM=?	Test command reports supported range of values for parameter **<mode>**.

#STM - Signaling Tones Mode	**SELINT 2**
AT#STM= [<mode>]	Set command enables/disables the signaling tones output on the audio path selected with **#SRP** command Parameter: **<mode>** - signaling tones status 0 - signaling tones disabled 1 - signaling tones enabled 2 - all tones disabled Note: **AT#STM=0** has the same effect as **AT+CALM=2**; **AT#STM=1** has the same effect as **AT+CALM=0**.
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format: **#STM: <mode>**
AT#STM=?	Test command reports supported range of values for parameter **<mode>**.

3.5.7.21.2.2. Tone Playback - #TONE

#TONE - Tone Playback	SELINT 2
AT#TONE=<tone> [,<duration>]	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a certain time. Parameters: **<tone>** - ASCII characters, range is **((0-9),#,*,(A-D),(G-L),Y,Z)**; - (0-9), #,*,(A-D): DTMF tone - (G-L): User Defined Tones - Y: free tone - Z: busy tone **<duration>** - Duration of current tone in 1/10 of Sec. 1..300 - tenth of seconds (default is 30)
AT#TONE=?	Test command returns the supported range of values for parameters **<tone>** and **<duration>**.
Note:	See AT#UDTSET command to set user defined tones

3.5.7.21.2.3. Extended tone generation - #TONEEXT

#TONEEXT – Extended tone generation	SELINT 2
AT# TONEEXT= <toneId>,<act>	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a infinite time, or stop the running tone Parameters: **< toneId >** - ASCII characters in the set **(0-9), #,*,(A-D),(G-L),Y,Z** ; - (0-9), #,*,(A-D) : DTMF tone - (G-L) : User Defined Tones[41]. - y : free tone - z: busy tone **< act >** - Action to be performed. - 0: Stop the <toneId> if running. - 1: Start the <toneId>.
AT#TONEEXT=?	Test command returns the range of supported values for parameter **<toneId>,<act>.**

[41] See also AT#UDTSET, AT#UDTRST and AT#UDTSAV command description following in this document.

3.5.7.21.2.4. Tone Classes Volume - #TSVOL

#TSVOL – Tone Classes Volume	**SELINT 2**
AT#TSVOL= <class>, <mode> [,<volume>]	Set command is used to select the volume mode for one or more tone classes. Parameters: **<class>** -sum of integers each representing a class of tones which the command refers to 1 - GSM tones 2 - ringer tones 4 - alarm tones 8 - signalling tones 16 - DTMF tones 32 - SIM Toolkit tones 64 - user defined tones 128 – Dial tones 255 - all classes **<mode>** - it indicates which volume is used for the classes of tones represented by **<class>** 0 - default volume is used 1 - the volume **<volume>** is used **<volume>** - volume to be applied to the set of classes of tones represented by **<class>**; it is mandatory if **<mode>** is **1**. 0..*max* - the value of *max* can be read issuing the Test command **AT#TSVOL=?** Note: The class DTMF Tones **(<class>**=16) refers only to the volume for locally generated DTMF tones. It doesn't affect the level of the DTMF generated by the network as result of AT+VTS command
AT#TSVOL?	Read command returns for each class of tones the last setting of **<mode>** and, if **<mode>** is not **0**, of **<volume>** too, in the format: **#TSVOL: 1,<mode1>[,<volume1>]<CR><LF>** **…** **#TSVOL:128,<mode128>[,<volume128>]**
AT#TSVOL=?	Test command returns the supported range of values of parameters **<class>**, **<mode>** and **<volume>**.
Example	AT#TSVOL=64,1,5 OK AT#TSVOL? #TSVOL:1,0 #TSVOL:2,0 #TSVOL:4,1,5 #TSVOL:8,0 #TSVOL:16,1,5

#TSVOL – Tone Classes Volume	SELINT 2
	#TSVOL:32,0 #TSVOL:64,1,5 #TSVOL:128,0 OK
Note:	GSM Tones: BusyToneId CongestionToneId RadioPathToneId CallWaitingToneId Ringer Tone: RingingToneMOId RingingToneMTId AutoRedialConnToneId Alarm Tones: AlarmToneId BatteryLowToneId SMSToneId MMSToneId PowerOnToneId PowerOffToneId NoUnitsLeftToneId Signaling Tones: classzeroToneId NetworkIndToneId NoServiceToneId SignallingErrToneId AutoRedialToneId ErrorToneId CallDroppedToneId DTMF Tones Local ADTMF SIM Toolkit Tones SIMTDialToneId SIMTBusyToneId SIMTCongestionToneId SIMTRadioPathToneId SIMTCallDroppedToneId SIMTErrorToneId SIMTCallWaitingToneId SIMTRingingToneMTId User Defined Tones: Tone defined with AT#UDTSET Dial tones: DialToneId

3.5.7.21.2.5. User Defined Tone SET - #UDTSET command

#UDTSET – User Defined Tone SET	SELINT 2
AT#UDTSET= <tone> ,<F1>,<A1> [,<F2>,<A2> [,<F3>,<A3>]]	Set command sets frequency and amplitude composition for a User Defined Tone. Parameters: **<tone>** - tone index (G,H,I,J,K,L) **<Fi>** - frequency in Hz; range is (300,3000) in step of 1 Hz **<Ai>** - amplitude in dB; range is (10,100) in step of 1 dB Note: Ai = 100 is equal to the max value of the single tone. Lower values attenuate output to the difference between 100 and the selected amplitude (ex: Ai = 80 is equal to 100-80 = -20dB). Note: issuing AT&F1 or AT&Z has the effect to set the parameters with the last saved in NVM values Note: Ai = 0 and Fi = 0 are only values for uninitialized parameters and can't be issued by AT command. Every time the set command is issued, the unspecified parameters are automatically reset to zero. (Ai,Fi) issuing needs also (Aj,Fj) with j<i.
AT# UDTSET?	Read command returns the current settings for the tones: **#UDTSET: G,<F1>,<A1>,<F2>,<A2>,<F3>,<A3>** **#UDTSET: H, <F1>,<A1>,<F2>,<A2>,<F3>,<A3>** **#UDTSET: I, <F1>,<A1>,<F2>,<A2>,<F3>,<A3>** **#UDTSET: J, <F1>,<A1>,<F2>,<A2>,<F3>,<A3>** **#UDTSET: K, <F1>,<A1>,<F2>,<A2>,<F3>,<A3>** **#UDTSET: L, <F1>,<A1>,<F2>,<A2>,<F3>,<A3>**
AT# UDTSET =?	Test command returns the supported range of values for **<tone>, <Fi>** and **<Ai>** parameters.

3.5.7.21.2.6. User Defined Tone SAVE - #UDTSAV command

#UDTSAV – User Defined Tone SAVe	SELINT 2
AT#UDTSAV	Execution command saves the actual values of frequency and amplitude parameters that have been set with the command **#UDTSET**
AT#UDTSAV =?	Test command returns the OK result code.
Example	AT#UDTSAV OK Current tones are saved in NVM

3.5.7.21.2.7. User Defined Tone Reset - #UDTRST command

#UDTRST – User Defined Tone ReSeT	SELINT 2
AT#UDTRST	Execution command resets to the default set the actual values of frequency and amplitude parameters that can be set with the command **#UDTSET**.
AT#UDTRST =?	Test command returns the OK result code.
Example	AT#UDRST OK The default value tones are restored in NVM

3.5.7.21.3. Audio profiles

3.5.7.21.3.1. Audio Profile Selection - #PSEL

#PSEL - Audio Profile Selection	SELINT 2
AT#PSEL=<prof>	Set command selects the active audio profile Parameter: **<prof>**: current profile 0 - standard profile 1..3 - extended profile, modificable. *Note: This parameter is saved in NVM issuing AT&W command.*
AT#PSEL?	The read command returns the active profile in the format: **#PSEL:<prof>**
AT#PSEL=?	Test command returns the supported range of values of parameter **<prof>**.

3.5.7.21.3.2. Audio Profile Configuration Save - #PSAV

#PSAV - Audio Profile Configuration Save	SELINT 2
AT#PSAV	Execution command saves the actual audio parameters in the NVM of the device. It is not allowed if active audio profile is 0. The audio parameters to store are: - microphone line gain - earpiece line gain - side tone gain - LMS adaptation speed - LMS filter length (number of coefficients) - speaker to micro signal power relation - noise reduction max attenuation - noise reduction weighting factor (band 300-500Hz)

#PSAV - Audio Profile Configuration Save	SELINT 2
	- noise reduction weighting factor (band 500-4000Hz) - AGC Additional attenuation - AGC minimal attenuation - AGC maximal attenuation - Uplink path biquad filters - Downlink path biquad filters
AT#PSAV=?	Test command returns the **OK** result code.
Example	AT#PSAV OK *Current audio profile is saved in NVM*

3.5.7.21.3.3. Audio Profile Factory Configuration - #PRST

#PRST - Audio Profile Factory Configuration	SELINT 2
AT#PRST	Execution command resets the actual audio parameters in the NVM of the device to the default set. It is not allowed if active audio profile is 0. The audio parameters to reset are: - microphone line gain - earpiece line gain - side tone gain - LMS adaptation speed (step size) - LMS filter length (number of coefficients) - speaker to micro signal power relation - noise reduction max attenuation - noise reduction weighting factor (band 300-500Hz) - noise reduction weighting factor (band 500-4000Hz) - AGC Additional attenuation - AGC minimal attenuation - AGC maximal attenuation
AT#PRST=?	Test command returns the **OK** result code.
Example	AT#PRST OK *Current audio profile is reset*

3.5.7.21.4. Audio filters

3.5.7.21.4.1. Cascaded filters - #BIQUADIN

#BIQUADIN - Uplink Path Biquad Filters	SELINT 2
AT# BIQUADIN= **<a_{F0}>** **[,<a_{F1}>** **[,<a_{F2}>** **[,<b_{F1}>** **[,<b_{F2}>** **[,<a_{S0}>** **[,<a_{S1}>** **[,<a_{S2}>** **[,<b_{S1}>** **[,<b_{S2}>** **]]]]]]]]**	Set command allows to configure the parameters of the two cascaded digital **biquad filters** $H_{First}(z) \cdot H_{Second}(z)$ in Uplink path (sending). It is not allowed if active audio profile is 0. Parameters: **<a_{Fn}>,<b_{Fn}>,<a_{Sn}>,<b_{Sn}>** - they all are specific parameters for the calculation of digital **biquad filters** as follows: $$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$$ $$H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$$ -32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15) Note: in the above formulas pay attention to the multiplier (2) for parameters **<a_{F1}>, <a_{S1}>, <b_{F1}>** and **<b_{S1}>** Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.
AT# BIQUADIN?	Read command returns the parameters for the active profile in the format: **#BIQUADIN:** **<a_{F0}>,<a_{F1}>,<a_{F2}>,<b_{F1}>,<b_{F2}>,<a_{S0}>,<a_{S1}>,<a_{S2}>,<b_{S1}>,<b_{S2}>** It is not allowed if active audio profile is 0.
AT# BIQUADIN=?	Test command returns the supported range of values for parameters **<a_{F0}>, <a_{F1}>, <a_{F2}>, <b_{F1}>, <b_{F2}>, <a_{S0}>, <a_{S1}>, <a_{S2}>, <b_{S1}>, <b_{S2}>**

3.5.7.21.4.2. Cascaded filters - #BIQUADOUT

#BIQUADOUT - Downlink Path Biquad Filters	SELINT 2
AT# BIQUADOUT= **<a_{F0}>** **[,<a_{F1}>** **[,<a_{F2}>** **[,<b_{F1}>**	Set command allows to configure the parameters of the two cascaded digital **biquad filters** $H_{First}(z) \cdot H_{Second}(z)$ in Downlink path (receiving). It is not allowed if active audio profile is 0.

#BIQUADOUT - Downlink Path Biquad Filters	**SELINT 2**
[,<b$_{F2}$> **[,<a$_{S0}$>** **[,<a$_{S1}$>** **[,<a$_{S2}$>** **[,<b$_{S1}$>** **[,<b$_{S2}$>** **]]]]]]]]**	Parameters: **<a$_{Fn}$>,<b$_{Fn}$>,<a$_{Sn}$>,<b$_{Sn}$>** - they all are specific parameters for the calculation of digital **biquad filters** as follows: $$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$$ $$H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$$ -32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15) Note: in the above formulas pay attention to the multiplier (2) for parameters **<a$_{F1}$>, <a$_{S1}$>, <b$_{F1}$>** and **<b$_{S1}$>** Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.
AT# BIQUADOUT?	Read command returns the parameters for the active profile in the format: **# BIQUADOUT: <a$_{F0}$>,<a$_{F1}$>,<a$_{F2}$>,<b$_{F1}$>,<b$_{F2}$>,<a$_{S0}$>,<a$_{S1}$>,<$_{S2}$>,<b$_{S1}$>,<b$_{S2}$>** It is not allowed if active audio profile is 0.
AT# BIQUADOUT=?	Test command returns the supported range of values for parameters **<a$_{F0}$>, <a$_{F1}$>, <a$_{F2}$>, <b$_{F1}$>, <b$_{F2}$>, <a$_{S0}$>, <a$_{S1}$>, <a$_{S2}$>, <b$_{S1}$>, <b$_{S2}$>**

3.5.7.21.4.3. Extended Uplink Biquad Filters - #BIQUADINEX

#BIQUADINEX – Extended Uplink Biquad Filters	**SELINT 2**
AT#BIQUADINEX= **<a$_{F0}$>** **[,<a$_{F1}$>** **[,<a$_{F2}$>** **[,<b$_{F1}$>** **[,<b$_{F2}$>** **[,<a$_{S0}$>** **[,<a$_{S1}$>** **[,<a$_{S2}$>** **[,<b$_{S1}$>** **[,<b$_{S2}$>** **]]]]]]]]**	Set command allows to configure the parameters of the two extended digital **biquad filters** $H_{First}(z) \cdot H_{Second}(z)$ in Uplink path (sending). It is not allowed if active audio profile is 0. Parameters: **<a$_{Fn}$>,<b$_{Fn}$>,<a$_{Sn}$>,<b$_{Sn}$>** - they all are specific parameters for the calculation of digital **biquad filters** as follows: $$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$$ $$H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$$

	-32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15) Note: in the above formulas pay attention to the multiplier (2) for parameters **<a_{F1}>, <a_{S1}>, <b_{F1}>** and **<b_{S1}>** Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.
AT#BIQUADINEX?	Read command returns the parameters for the active profile in the format: **#BIQUADINEX:** **<a_{F0}>,<a_{F1}>,<a_{F2}>,<b_{F1}>,<b_{F2}>,<a_{S0}>,<a_{S1}>,<a_{S2}>,<b_{S1}>,<b_{S2}>** Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.
AT#BIQUADINEX=?	Test command returns the supported range of values for parameters **<a_{F0}>, <a_{F1}>, <a_{F2}>, <b_{F1}>, <b_{F2}>, <a_{S0}>, <a_{S1}>, <a_{S2}>, <b_{S1}>, <b_{S2}>**

3.5.7.21.4.4. Extended Downlink Biquad Filters - #BIQUADOUTEX

#BIQUADOUTEX – Extended Downlink Biquad Filters	**SELINT 2**
AT#BIQUADOUTEX= **<a_{F0}>** **[,<a_{F1}>** **[,<a_{F2}>** **[,<b_{F1}>** **[,<b_{F2}>** **[,<a_{S0}>** **[,<a_{S1}>** **[,<a_{S2}>** **[,<b_{S1}>** **[,<b_{S2}>** **]]]]]]]]]**	Set command allows to configure the parameters of the two extended digital **biquad filters** $H_{First}(z) \cdot H_{Second}(z)$ in Downlink path (receiving). It is not allowed if active audio profile is 0. Parameters: **<a_{Fn}>,<b_{Fn}>,<a_{Sn}>,<b_{Sn}>** - they all are specific parameters for the calculation of digital **biquad filters** as follows: $$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$$ $$H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$$ -32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15) Note: in the above formulas pay attention to the multiplier (2) for parameters **<a_{F1}>, <a_{S1}>, <b_{F1}>** and **<b_{S1}>**

	Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.
AT#BIQUADOUTEX?	Read command returns the parameters for the active profile in the format: **#BIQUADOUTEX:** **<a_{F0}>,<a_{F1}>,<a_{F2}>,<b_{F1}>,<b_{F2}>,<a_{S0}>,<a_{S1}>,<a_{S2}>,<b_{S1}>,<b_{S2}>** Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.
AT#BIQUADOUTEX=?	Test command returns the supported range of values for parameters **<a_{F0}>, <a_{F1}>, <a_{F2}>, <b_{F1}>, <b_{F2}>, <a_{S0}>, <a_{S1}>, <a_{S2}>, <b_{S1}>, <b_{S2}>**

3.5.7.21.5. Echo canceller configuration

3.5.7.21.5.1. Audio Profile Setting - #PSET

#PSET - Audio Profile Setting	**SELINT 2**
AT#PSET= **<scal _in>** **[,<scal _out>** **[,<side_tone_atten>** **[,<adaption_speed>** **[,<filter_length>** **[,<rxtxrelation>** **[,<nr_atten>** **[,<nr_w_0>** **[,<nr_w_1>** **[,<add_atten>** **[,<min_atten>** **[,<max_atten>** **]]]]]]]]]]]]]]	Set command sets parameters for the active audio profile. It is not allowed if active audio profile is 0. Parameters: **<scal_in>** - microphone line digital gain **<scal_out>** - earpiece line digital gain **<side_tone_atten>** - side tone attenuation **<adaption_speed>** - LMS adaptation speed **<filter_length>** - LMS filter length (number of coefficients) **<rxtxrelation>** - speaker to micro signal power relation **<nr_ atten >** - noise reduction max attenuation **<nr_w_0>** - noise reduction weighting factor (band 300-500Hz) **<nr_w_1>** - noise reduction weighting factor (band 500-4000Hz) **<add_atten>** - AGC Additional attenuation **<min_atten>** - AGC minimal attenuation **<max_atten>** - AGC maximal attenuation
AT#PSET?	Read command returns the parameters for the active profile in the format: **#PSET:<scal_in>,<scal_out>,<side_tone_atten>,<adaption_speed>,<filter_length>,<rxtxrelation>,<nr_atten>,<nr_w_0>,<nr_w_1>,<add_atten>,<min_atten>,<max_atten>** It is not allowed if active audio profile is 0.
AT#PSET=?	Test command returns the supported range of values for the audio parameters.

3.5.7.21.5.2. Handsfree Configuration - #HFCFG

#HFCFG – Handsfree Configuration	SELINT 2
AT#HFCFG= <agc_rxtx_en>, <agc_rxtx>,<hf_gain>	Set command configures AGC threshold for Double Talk detection and digital gain in Uplink. Parameters: **<agc_rxtx_en>** 0 – disables different threshold for AGC 1 – enables different threshold for AGC **< agc_rxtx >:** -960..960 - parameter that specifies the threshold for AGC **< hf_gain >:** 0 – disables +18dB of gain in Uplink path 1 – enables +18dB of gain in Uplink path Note: the digital gain in Uplink path should be enabled only reducing by the same amount the other analog/digital gains to avoid saturation. Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.
AT#HFCFG?	Read command reports the currently selected parameters in the format: **#HFCFG: <agc_rxtx_en>,<agc_rxtx>,<hf_gain>** Note: if active audio profile is 0, then an ERROR is returned. If active audio profile is different from 0, then the default value for all the parameters is 0.
AT#HFCFG =?	Test command returns the supported range of values for all the parameters.

3.5.7.21.5.3. TX Noise Injector configuration - #TXCNI

#TXCNI – TX Noise Injector configuration	SELINT 2
AT#TXCNI =<support> ,<gain>,<floor>	Set command enables and configures comfort noise injector embedded. Parameters: **<support>** 0 - disable TXCNI functionality 1 - enable TXCNI functionality **<gain>** 0..32767 – gain value of noise injected

	<floor> 0..32767 – floor value of noise injected Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.
AT#TXCNI?	Read command reports the currently selected parameters in the format: **#TXCNI: <support>,<gain>,<floor>** Note: if active audio profile is 0, then an ERROR is returned. If active audio profile is different from 0, then the default value for all the parameters is 0.
AT#TXCNI=?	Test command returns the supported range of values for all the parameters.
Notes:	This command is available only for GE864-QUAD Automotive

3.5.7.21.5.4. Handsfree Echo Canceller - #SHFEC

#SHFEC - Handsfree Echo Canceller	**SELINT 0 / 1**
AT#SHFEC[= [<mode>]]	Set command enables/disables the echo canceller function on audio handsfree output. Parameter: **<mode>** 0 - disables echo canceller for handsfree mode (factory default) 1 - enables echo canceller for handsfree mode Note: This setting returns to default after power off. Note: issuing **AT#SHFEC<CR>** is the same as issuing the Read command. Note: issuing **AT#SHFEC=<CR>** is the same as issuing the command **AT#SHFEC=0<CR>**.
AT#SHFEC?	Read command reports whether the echo canceller function on audio handsfree output is currently enabled or not, in the format: **#SHFEC: <mode>**
AT#SHFEC=?	Test command returns the supported range of values of parameter **<mode>**.

#SHFEC - Handsfree Echo Canceller	**SELINT 2**
AT#SHFEC= [<mode>]	Set command enables/disables the echo canceller function on audio handsfree output. Parameter: **<mode>**

#SHFEC - Handsfree Echo Canceller	SELINT 2
	0 - disables echo canceller for handsfree mode (factory default) 1 - enables echo canceller for handsfree mode Note: This setting returns to default after power off.
AT#SHFEC?	Read command reports whether the echo canceller function on audio handsfree output is currently enabled or not, in the format: **#SHFEC: <mode>**
AT#SHFEC=?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.5.5. Handset Echo Canceller - #SHSEC

#SHSEC - Handset Echo Canceller	SELINT 2
AT#SHSEC = <mode>	Set command enables/disables the echo canceller function on audio handset output. Parameter: **<mode>** 0 - disables echo canceller for handset mode (default) 1 - enables echo canceller for handset mode *Note: This parameter is saved in NVM issuing AT&W command*.
AT#SHSEC?	Read command reports whether the echo canceller function on audio handset output is currently enabled or not, in the format: **#SHSEC: <mode>**
AT#SHSEC =?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.5.6. Echo Reducer Configuration - #ECHOCFG

#ECHOCFG – Echo Reducer Configuration	SELINT 2
AT#ECHOCFG=<par_1> [,<par_2>[,…,<par_N>]]	Set command writes values in echo reducer parameters. It is not allowed if active audio profile is 0. The module responds to the set command with the prompt '>' and waits for the data to send. Parameters: **<par_1>** 0 – configure all parameters, module awaits 39 values 1,2,..,39 – configure single parameters, module awaits 1 value **<par_i>** with i = {2;N} 1,2,..,39 – configure every parameter specified

	After '>' to complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). Data shall be written in Hexadecimal Form with 4 digits for every **<par_i>** value provided by set command. If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported. Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed. Note: Configuring single parameters, it is allowed to enter a maximum of 32 parameters. Note: the default configuration is targeted for almost all common acoustic echo scenarios; if further tuning is needed the customer can change by oneself only the following parameters: **<par_14>** 0..32767 - factory default value is 18384 Additional gain: increasing this parameter average echoes are more attenuated **<par_15>** 0..16384 - factory default value is 2000 Total gain lower limit: increasing this parameter small echoes are more attenuated **<par_16>** 0..16384 - factory default value is 10000 Total gain upper limit: increasing this parameter load echoes are more attenuated **<par_32>** 0..32767 - factory default value is 6000 NR Attenuation factor: decreasing this parameter increases allowed attenuation **<par_33>** 0..32767 - factory default value is 8000 Overestimation factor 0: decreasing this parameter increases noise reduction and decreases speech quality below 500Hz **<par_34>** 0..32767 - factory default value is 8000 Overestimation factor 1: decreasing this parameter increases noise reduction and decreases speech quality above 500Hz

	The remaining parameters could be changed but under the supervision of Telit Technical Support.
AT#ECHOCFG?	Read command reports the currently set parameters in the format: **#ECHOCFG: <par_1><par2>…<parN>** **<par_i>:** Full set of registers values dumped in hexadecimal form, 39 words (156 characters). It is not allowed if active audio profile is 0.
AT#ECHOCFG=?	Test command reports supported range of values for all parameters in the format: **#ECHOCFG: <i>, (<low_i>-<high_i>)** Where **<i>:** Parameter index **<low_i>:** Lower limit of **<par_i>** **<high_i>:** High limit of **<par_i>**

3.5.7.21.5.7. Manage of Echo Canceller features - #ECHOACT

#ECHOACT – Manage of Echo Canceller features	**SELINT 2**
AT#ECHOACT=<echo mode>,<agc mode>,<nr mode>,<ser mode>	This command enables/disables four different features. First parameter enables/disables the echo canceller function on audio handset output involving the setting of both command #SHFEC than #SHSEC. Second parameter enables/disables the automatic gain control function on audio handset output involving the setting of both command #SHFAGC than #SHSAGC. Third parameter enables/disables the noise reduction function on audio handset output involving the setting of both command #SHFNR than #SHSNR. Fourth parameter enables/disables the spectrum echo reduction function on audio handset output. Parameters: **<echo mode>** 0 - disables echo canceller (default) 1 - enables echo canceller

	<agc mode> 0 - disables automatic gain control (default) 1 - enables automatic gain control **<nr mode>** 0 - disables noise reduction (default) 1 - enables noise reduction **<ser mode>** 0 - disables spectrum echo reduction (default) 1 - enables spectrum echo reduction Note: All parameters set are saved in NVM issuing AT&W command. Note: <ser mode> may be not available on some products (see AT Commands Availability Table).
MAY BE	Read command reports whether the echo canceller function, automatic gain control function, the noise reduction function and the spectrum echo reduction function on audio handset output is currently enabled or not, in the format: **#ECHOACT: <echo mode>, <agc mode>, <nr mode>, <ser mode>**
AT#ECHOACT =?	Test command returns the supported range of values for parameters **<echo mode>, <agc mode>, <nr mode>, <ser mode>.**

3.5.7.21.5.8. Handsfree Automatic Gain Control - #SHFAGC

#SHFAGC - Handsfree Automatic Gain Control	**SELINT 2**
AT# SHFAGC = <mode>	Set command enables/disables the automatic gain control function on audio handsfree input. Parameter: **<mode>** 0 - disables automatic gain control for handsfree mode (default) 1 - enables automatic gain control for handsfree mode *Note: This parameter is saved in NVM issuing AT&W command.*
AT# SHFAGC?	Read command reports whether the automatic gain control function on audio handsfree input is currently enabled or not, in the format: **#SHFAGC: <mode>**
AT# SHFAGC =?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.5.9. Handset Automatic Gain Control - #SHSAGC

#SHSAGC - Handset Automatic Gain Control	SELINT 2
AT#SHSAGC = <mode>	Set command enables/disables the automatic gain control function on audio handset input. Parameter: **<mode>** 0 - disables automatic gain control for handset mode (default) 1 - enables automatic gain control for handset mode *Note: This parameter is saved in NVM issuing AT&W command.*
AT#SHSAGC?	Read command reports whether the automatic gain control function on audio handset input is currently enabled or not, in the format: **#SHSAGC: <mode>**
AT#SHSAGC =?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.5.10. Handsfree Noise Reduction - #SHFNR

#SHFNR - Handsfree Noise Reduction	SELINT 2
AT#SHFNR = <mode>	Set command enables/disables the noise reduction function on audio handsfree input. Parameter: **<mode>** 0 - disables noise reduction for handsfree mode (default) 1 - enables noise reduction for handsfree mode *Note: This parameter is saved in NVM issuing AT&W command.*
AT#SHFNR?	Read command reports whether the noise reduction function on audio handsfree input is currently enabled or not, in the format: **#SHFNR: <mode>**
AT#SHFNR =?	Test command returns the supported range of values of parameter **<mode>**.

3.5.7.21.5.11. Handset Noise Reduction - #SHSNR

#SHSNR - Handset Noise Reduction	SELINT 2
AT# SHSNR = <mode>	Set command enables/disables the noise reduction function on audio handset input. Parameter: **<mode>**

#SHSNR - Handset Noise Reduction		SELINT 2
	0 - disables noise reduction for handset mode (default) 1 - enables noise reduction for handset mode *Note: This parameter is saved in NVM issuing AT&W command*.	
AT# SHSNR?	Read command reports whether the noise reduction function on audio handset input is currently enabled or not, in the format: **# SHSNR: <mode>**	
AT# SHSNR =?	Test command returns the supported range of values of parameter **<mode>**.	

3.5.7.21.6. Embedded DTMF decoder

3.5.7.21.6.1. Embedded DTMF decoder enabling - #DTMF

#DTMF – Embedded DTMF decoder enabling		SELINT 2
AT#DTMF=<mode>	Set command enables/disables the embedded DTMF decoder. Parameters: **<mode>:** 0 – disable DTMF decoder (default) 1 – enables DTMF decoder 2 – enables DTMF decoder without URC notify 3 – enables Enhanced DTMF decoder **Note: This functionality has to be enabled only with AT#CPUMODE=1 (valid for 10.0x.xxx and 16.00.yyy SW releases).** Note: if **<mode>**=1, the receiving of a DTMF tone is pointed out with an unsolicited message through AT interface in the following format: #DTMFEV: x with x as the DTMF digit Note: the duration of a tone should be not less than 50ms. Note: the value set by command is not saved and a software or hardware reset restores the default value. The value can be stored in NVM using profiles. Note: When DTMF decoder is enabled, PCM playing and recording are automatically disabled (AT#SPCM will return error).	
AT#DTMF?	Read command reports the currently selected **<mode>** in the format: **#DTMF: <mode>**	

AT#DTMF =?	Test command reports supported range of values for all parameters.

3.5.7.21.6.2. Embedded DTMF decoder configuration - #DTMFCFG

DTMFCFG – Embedded DTMF decoder configuration	**SELINT 2**
AT#DTMFCFG=<scaling> ,<threshold_1>,<threshold_2>	Set command allows configuration of the embedded DTMF decoder. Parameters: **<scaling>:** 3..11 – this is the scaling applied to the pcm samples in order to manage arithmetic operations. The default value is 7. **<threshold_1>:** 1000..20000 – this is the numeric threshold used to detect DTMF tones. The default value is 2500. **<threshold_2>:** 1000..20000 – this is the numeric threshold used to start DTMF decoding. The default value is 1500. **Note: The default values were chosen after a fine tuning, so every change should be done very carefully to avoid wrong decoding.** Note: the values set by command are not saved and a software or hardware reset restores the default value. Note: Default values are referred to standard DMTF decoder (AT#DTMF=1)
AT#DTMFCFG?	Read command reports the currently selected **<scaling>,<threshold>** in the format: **# DTMFCFG: <scaling>,<threshold_1>,<threshold_2>**
AT#DTMFCFG =?	Test command reports supported range of values for all parameters.

3.5.7.21.7. Digital Voice Interface

3.5.7.21.7.1. Digital Voiceband Interface - #DVI

#DVI - Digital Voiceband Interface	**SELINT 0/1/2**
AT#DVI=<mode> [,<dviport>, <clockmode>]	Set command enables/disables the Digital Voiceband Interface. Parameters: **<mode>** - enables/disables the DVI.

#DVI - Digital Voiceband Interface	SELINT 0/1/2
	0 - disable DVI; audio is forwarded to the analog line; DVI pins can be used for other purposes, like GPIO, etc. (factory default) 1 - enable DVI; audio is forwarded to the DVI block 2 - enable DVI; audio is forwarded both to the DVI block and to the analog lines Note: with <mode>=2 analog input disabled; Note: <mode>=2 not available for SW versions 13.00.xxx and 16.00.xxx **<dviport>** 1 - DVI port 1 will be used (factory default) 2 - DVI port 2 will be used. Available only for GE864-QUAD **<clockmode>** 0 - DVI slave 1 - DVI master (factory default) Note: setting **<clockmode>=0** has full effect only if **<dviport>=1** NOTE: DVI slave is available only on port 1 NOTE: for further information see "Digital Voice Interface Application Note"
AT#DVI?	Read command reports last setting, in the format: **#DVI: <mode>,<dviport>,<clockmode>**
AT#DVI=?	Test command reports the range of supported values for parameters **<mode>,<dviport>** and **<clockmode>**
Example	AT#DVI=2,1,1 OK *Both analog and DVI activated for audio. DVI is configured as master providing on DVI Port #1*

3.5.7.21.7.2. Digital voiceband interface extension - #DVIEXT

#DVIEXT - Digital Voiceband Interface Extension	SELINT 0,1,2
AT#DVIEXT=<config>[,<samplerate>,<samplewidth>,<audiomode>,<edge>]	Set command configures the Digital Voiceband Interface. Parameters: **<config>** 0 – Burst Mode (factory default) 1 – Normal Mode **<samplerate>** 0 – audio scheduler sample rate 8KHz (factory default) 1 - reserved **<samplewidth>**

#DVIEXT - Digital Voiceband Interface Extension	SELINT 0,1,2
	0 – 16 bits per sample 1 – reserved 2 – reserved 3 – 24 bits per sample 4 – 32 bits per sample **<audiomode>** 0 – Mono Mode 1 – Dual Mono (available only in Normal Mode) 2 – reserved **<edge>** 0 – data bit is transmitted on falling edge of clock and sampled on rising edge of clock (factory default) 1 – data bit is transmitted on rising edge of clock and sampled on falling edge of clock NOTE: in burst mode <edge> parameter doesn't have effect, and DVI has the same behaviour as <edge> = 1 NOTE: this parameter is saved in NVM issuing AT&W command
AT#DVIEXT?	Read command reports last setting, in the format: **#DVIEXT:<config>,<samplerate>,<samplewidth>,<audio mode>,<edge>**
AT#DVIEXT=?	Test command reports the range of supported values for parameters: **<config>,<samplerate>,<samplewidth>,<audiomode>,<edge>**
Example	

3.5.7.21.7.3. DVI Clock Activation - #DVICLK

#DVICLK – DVI Clock Activation	SELINT 2
AT#DVICLK=<clk>	Set command configures and activates the DVICLK clock signal. Parameters: **<clk>** 0 – Disable (factory default) 1 – DVI Clock activated at 256KHz 2 – DVI Clock activated at 384KHz 3 – DVI Clock activated at 512KHz Note: the commands #DVI, #DVIEXT, #OAP can turn off the DVICLK signal or change its frequency. Note: after setting the DVICLK frequency through #DVICLK command, a voice call does not modify the DVICLK setting.

#DVICLK – DVI Clock Activation	SELINT 2
AT#DVICLK?	Read command reports last setting, in the format: **#DVICLK: <clk>**
AT#DVICLK=?	Test command reports the range of supported values for parameters: **<clk>**

3.5.7.21.8. Audio file and stream management commands

3.5.7.21.8.1. PCM Play and Receive - #SPCM

#SPCM - PCM Play And Receive	SELINT 2
AT#SPCM=<mode>, <dir>	Set command allows user either to send speech samples coming from microphone or downlink audio channel to serial port in PCM format, or to play a PCM stream coming from serial port to speaker or uplink audio channel, or play speech samples coming from serial port to uplink while send speech samples coming from downlink to serial port; all modes are also available during speech calls. As showed in the table below if **<mode>** = 3 and **<dir>** = 1 then the speech samples coming from serial port are sent to uplink and, at the same time, the speech samples coming from downlink are sent to serial port. An active speech call is needed when sending/receiving to/from audio channel in order to have full-duplex streaming. Parameters: **<mode>:** action to be executed; 1 - reproduce PCM stream from serial to selected path. 2 - send speech from selected path to serial. 3 - send/receive speech to/from selected direction **<dir>** **<dir>:** Select the audio path. 0 - send/receive to/from analog front end 1 - send/receive to/from audio channel 2 - send/receive to/from both analog front end and audio channel Note: Execution command switches module in online mode, with flow control set by **&K*x***. Module moves back to command mode either afer entering the escape sequence +++ or as a consequence of a **DTR transition**. Note: PCM stream format must be 8 bit, 8KHz sampling, Mono. The following table summarizes the status of audio path during a speech call for different configurations and with sidetone disabled:

	mode = 1	**mode = 2**	**mode = 3**
dir = 0	PCM stream to speaker	PCM stream from microphone	Not supported

	<table><tr><td>dir = 1</td><td>PCM stream to Uplink</td><td>PCM stream from Downlink</td><td>PCM stream to/from Uplink/Downlink</td></tr><tr><td>dir = 2</td><td>PCM stream to both speaker and Uplink</td><td>PCM stream from both microphone and Downlink</td><td>Not supported</td></tr></table> Note: It's possible to use this command in combination with DTMF decoding feature during a voice call. The unique configuration supported is with DTMF decoding active and AT#SPCM=1,1. This combination is supported only for 16.0x.xxx SW version, starting from 16.01.xx0 Note: mode=3 supports only dir=1; furthermore, mode=3 is supported only for 16.0x.xxx SW version, starting from 16.01.xx0 Note: dir=2 is not supported in 13.00.xxx SW release.
AT#SPCM=?	Test command returns the supported range of values for parameters **<mode>** and **<dir>**. **#SPCM: <mode>,<dir>**
Example	AT#SPCM=1,0 CONNECT +++ NO CARRIER Note: after the CONNECT, PCM stream has to be sent to serial port AT#SPCM=2,0 CONNECT +++ NO CARRIER Note: after the CONNECT, PCM stream can be read from serial port

3.5.7.21.8.2. AMR File Format Play - #SAMR

#SAMR - AMR File Format Play	**SELINT 2**
AT#SAMR=<mode>, <dir>	Execution command allows user to play an AMR audio stream coming from serial port to speaker or uplink audio channel. The audio stream shall have an AMR file format without the 6-byte header (0x23,0x21,0x41,0x4D,0x52,0x0A). An active speech call is needed when sending to audio channel. Parameters:

	<mode>: action to be execute; 1 - play AMR stream from serial to selected direction **<dir>**. **<dir>:** Select the audio path. 0 - send/receive to/from audio front end 1 - send/receive to/from audio channel Note: Execution command switches module in online mode. Module moves back to command mode either after entering the escape sequence +++ or as a consequence of a **DTR transition**. Note: The AMR bit rate shall be set using **AT#SAMRCFG** command. Note: While playing, uplink and downlink speech muting can be set using **AT#SAMRCFG** command.
AT#SAMR=?	Test command returns the supported range of values for parameters **<mode>** and **<dir>**.
Example	AT#SAMR=1,0 CONNECT +++ NO CARRIER Note: after the CONNECT, audio stream in AMR format has to be sent to serial port

3.5.7.21.8.3. SAMR Configuration - #SAMRCFG

#SAMRCFG – SAMR Configuration	**SELINT 2**
AT#SAMRCFG=<frame_type>[,<play_att>[,<rec_att>[,<mute_ul>[,<mute_dl>]]]]	Set command configures the parameters related to the **AT#SAMR** command, that allows to play audio streams in the AMR file format. Parameters: **<frame_type>** 0 - AMR 4.75 (factory default) 1 - AMR 5.15 2 - AMR 5.95 3 - AMR 6.70 4 - AMR 7.40 5 - AMR 7.95 6 - AMR 10.2 7 - AMR 12.2 **<play_att>** 0 - 0dB attenuation (factory default)

	1..30 - 1dB/step attenuation **<rec_att>** 0 - 0dB attenuation (factory default) 1..30 - 1dB/step attenuation **<mute_ul>** 0 – upink muting off (factory default) 1 – upink muting on **<mute_dl>** 0 – downlink muting off (factory default) 1 – downlink muting on
AT#SAMRCFG?	Read command reports the currently set parameters in the format: **#SAMRCFG:<frame_type>,<play_att>,<rec_att>,<mute_ul>,<mute_dl>**
AT#SAMRCFG=?	Test command returns the supported range of values for parameters **<frame_type>, <play_att>, <rec_att>, <mute_ul>** and **<mute_dl>**.

3.5.7.21.8.4. Delete all audio files - #ADELA

#ADELA – Delete all audio files	**SELINT 2**
AT#ADELA	This command deletes all PCM audio files stored in the modem file system.
AT#ADELA=?	Test command returns the OK result code

3.5.7.21.8.5. Delete audio file - #ADELF

#ADELF – Delete audio file	**SELINT 2**
AT#ADELF=<filename>	This command deletes a specific PCM audio file. Parameter: **<filename>** - file name, string type with .pcm extension
AT#ADELF=?	Test command returns the OK result code

3.5.7.21.8.6. List audio file - #ALIST

#ALIST – List audio file	**SELINT 2**
AT#ALIST	This command lists all PCM audio files stored in the modem file system The response format is:

	#ALIST: <filename>,<filesize>,<crc><**CR**><**LF**> Parameter: <**filename**> - file name, string type <**filesize**> - file size in bytes <**crc**> - CRC16 poly (x^16+x^12+x^5+1) of file in hex format Note: CRC16 is calculated using the standard CRC16-CCITT x^16+x^12+x^5+1 polynomial (0x1021 representation) with initial value FFFF. Note: If a file is in use, CRC16 can't be calculated and execution command does not report <crc> for that file. Note: CRC calculation time depends on file size.
AT#ALIST=?	Test command returns the OK result code

3.5.7.21.8.7. Play an audio file - #APLAY

#APLAY – Play an audio file	**SELINT 2**
AT#APLAY= <mode>[,<dir>,<filename>]	This command plays PCM audio file on the speaker or uplink path. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas. Parameters: <**mode**> 0 - stop to play, Optional parameters are not allowed (default value) 1 - start to play, Optional parameters are mandatory <**dir**>: select audio path. 0 - send to the speaker(default value) 1 - send to the uplink path <**filename**> - file name, string type with .pcm extension When the playing is stopped or an error occurs, an URC is provided with the following format: **#APLAYEV: <result>** Where: <**result**> 0 – pcm play done 1 – pcm play error Note: Feature supported only in idle mode Note: The format of mono PCM audio file is 8k samples/sec and 16 bits/sample.

AT#APLAY?	Read command reports the currently selected **<mode>,<dir>** in the format: **#APLAY: <mode>,<dir>**
AT#APLAY=?	Test command reports the supported range of values for the parameters **<mode>,<dir>** in the format: **#APLAY: (0,1),(0,1)**
Example	AT#APLAY = 1,0,"rec.pcm" OK #APLAYEV: 0

3.5.7.21.8.8. Record an audio file - #ARECD

#ARECD – Record an audio file	**SELINT 2**
AT#ARECD= <mode>[,<filename>]	This command records speech data coming from microphone in the modem file system with a PCM audio file format. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas. Parameter: **<mode>** 0 - stop to record , Optional parameter is not allowed (default value) 1 - start to record, Optional parameter is mandatory **<filename>** - file name, string type with .pcm extension When the recording is stopped or an error occurs, an URC is provided with the following format: **#ARECDEV: <result>** Where: **<result>** 0 – pcm record done 1 – pcm record error Note: Feature supported only in idle mode Note: Filename has a maximum of 16 characters excluding double inverted commas. Note: The total size of all audio files must not be over <total size> in #ASIZE Note: Below 200 Kb of free space the file system could stop

	the recording and no more recordings are allowed.
AT#ARECD?	Read command reports the currently selected **<mode>** in the format: **#ARECD: <mode>**
AT#ARECD=?	Test command reports the supported range of values for the parameters **<mode>** in the format: **#ARECD: (0,1)**
Example	AT# ARECD =1,"rec.pcm" OK AT# ARECD =0 OK #ARECDEV: 0

3.5.7.21.8.9. Receive an audio file - #ARECV

#ARECV – Receive an audio file	**SELINT 2**
AT#ARECV=<filename>	This command allows user to receive a PCM audio file stored in the modem file system. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas. Parameters: **<filename>** - file name, string type with .pcm extension Note: The file should be sent using RAW ASCII file transfer. Hardware flow control.
AT#ARECV =?	Test command returns the OK result code
Example	AT#ARECV=<filename> CONNECT Note: after the CONNECT, a PCM audio file has to be received from serial port

3.5.7.21.8.10. Send an audio file - #ASEND

#ASEND – Send an audio file	**SELINT 2**
AT#ASEND= <filename>,<filesize>	This command allows user to send a PCM audio file to serial port and store in the modem file system. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas.

	Parameters: **<filename>** - file name, string type with .pcm extension **<filesize>** - file size in bytes When the sending is stopped or an error occurs, an URC is provided with the following format: **#ASENDEV: <result>** Where: **<result>** 0 – pcm storing done 1 – pcm storing error Note: Filename has a maximum of 16 characters excluding double inverted commas Note: Total size of all audio files must not be over <total size> in #ASIZE Note: The file should be sent using RAW ASCII file transfer. Hardware flow control.
AT#ASEND=?	Test command returns the OK result code
Example	AT#ASEND="test.pcm",159182 CONNECT OK #ASENDEV: 0 Note: after the CONNECT, an audio file of 159182 bytes has to be sent to serial port

3.5.7.21.8.11. Audio available size - #ASIZE

#ASIZE – Audio available size	**SELINT 2**
AT#ASIZE	This command shows residual space in bytes available to store PCM audio files. The response format is: #ASIZE: <total size>,<used size>,<free size> Note: Some configuration files are stored in file system and with empty storage the <used_size> could be not zero. Moreover the file size on storage could differ from actual size due to block allocation.
AT#ASIZE=?	Test command returns the OK result code

3.5.7.21.8.12. Find a specific audio file - #AFIND

#AFIND – Find a specific audio file	SELINT 2
AT#AFIND=<filename>	This command finds a specific audio file. Parameter: <**filename**> - file name, string type Note: filename has a maximum of 16 characters.
AT#AFIND=?	Test command returns the OK result code

3.5.7.21.9. Miscellaneous commands

3.5.7.21.9.1. TeleType Writer - #TTY

#TTY - TeleType Writer	SELINT 2
AT#TTY=<support>	Set command enables/disables the TTY functionality. Parameter: **<support>** 0 - disable TTY functionality (factory default) 1 - enable TTY functionality
AT#TTY?	Read command returns whether the TTY functionalityis currently enabled or not, in the format: **#TTY: <support>**
AT#TTY=?	Test command reports the supported range of values for parameter **<support>**.

3.5.7.22. Emergency call and eCall Management

3.5.7.22.1. Dial an emergency call - #EMRGD

#EMRGD – dial an emergency call	SELINT 2
AT#EMRGD[=<par>]	This command initiates an emergency call. Parameters: **<par>:** 0 – initiates an emergency call without specifying the Service Category. (default value) 1..31 - sum of integers each representing a specific Emergency Service Category: 1 - Police 2 - Ambulance 4 - Fire Brigade 8 – Marine Guard 16 - Mountain Rescue 32 - Manually Initiated eCall (if eCall is supported – Rel8 feature) 64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature) When the emergency call can initiate, an indication of the Service Categories selected is shown before the OK in the following format: **#EMRGD: <serv>[,<serv>..[,<serv]]** Where **<serv>** “Police “Ambul” “FireBrig” “MarineGuard” “MountRescue” “MIeC” “AIeC” Example: AT#EMRGD=17 #EMRGD: "Police"," MountRescue " OK

AT#EMRGD	The execution command initiates an emergency call without specifying the Service Category.
AT#EMRGD?	The read command reports the emergency numbers received from the network (Rel5 feature) and the associated service categories in the format **[#EMRGD: <num1>[,<par1>,<serv>[,<serv>..[,<serv]]]** **[#EMRGD: <num*n*>[,<par*n*>,<serv>[,<serv>..[,<serv]]]]** Where **<num*n*>** Is the emergency number (that can be dialled with ATD command). **<par*n*>** 1..31 - sum of integers each representing a specific Emergency Service Category: 1 - Police 2 - Ambulance 4 - Fire Brigade 8 – Marine Guard 16 - Mountain Rescue 32 - Manually Initiated eCall (if eCall is supported – Rel8 feature) 64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature) Example: AT#EMRGD? #EMRGD: 123,2,"Ambul" #EMRGD: 910,5,"Police","FireBrig" OK
AT#EMRGD=?	Test command reports the supported range of values for parameter **<par>**. If eCall is supported 0-32,64 If eCall is not supported 0-31

3.5.7.22.2. IVS push mode activation - #MSDPUSH

#MSDPUSH – IVS push mode activation	SELINT 2
AT#MSDPUSH	Execution command enables IVS to issue the request for MSD transmission. It reuses downlink signal format to send a initiation message to the PSAP.
AT#MSDPUSH=?	Test command returns the **OK** result code.

3.5.7.22.3. Sending MSD data to IVS - #MSDSEND

#MSDSEND – Sending MSD data to IVS	SELINT 2
AT#MSDSEND	Execution command allows to send 140 bytes of MSD data to the IVS embedded while modem is in command mode. The device responds to the command with the prompt '>' and waits for the MSD to send. To complete the operation send **Ctrl-Z** char (**0x1A** hex); to exit without writing the message send **ESC** char (**0x1B** hex). If data are successfully sent, then the response is **OK**. If data sending fails for some reason, an error code is reported Note: the maximum number of bytes to send is 140; trying to send more data will cause the surplus to be discarded and lost.
AT#MSDSEND=?	Test command returns the **OK** result code.

3.5.7.22.4. Read MSD - #MSDREAD

#MSDREAD– Read MSD	SELINT 2
AT#MSDREAD	Execution command returns the last MSD set by **#MSDSEND**
AT#MSDREAD?	Read command returns the last MSD set by **#MSDSEND**
AT#MSDREAD=?	Test command returns OK
Example	AT#MSDREAD > 234234234234 OK AT#MSDREAD #MSDREAD:

	23423423423400000000000000000000000000000000000000000000000 00000000000000000000000000000000000000000000000000000000000 00000000000000000000000000000000000000000000000000000000000 00000000000000000000000000000000000000000000000000000000000 00000000000000000000000000000000000000000000 OK

3.5.7.22.5. Initiate eCall - +CECALL

+CECALL – Initiate eCall	**SELINT 2**
AT+CECALL=<type of eCall>	Set command is used to trigger an eCall to the network. Based on the configuration selected, it can be used to either trigger a test call, a reconfiguration call, a manually initiated call or an automatically initiated call. Parameters: **<type of eCall>:** 0 – test call 1 – reconfiguration call 2 – manually initiated eCall 3 – automatically initiated eCall
AT+CECALL?	Read command returns the type of eCall that is currently in progress in the format: **+CECALL: [<type of eCall>]**
AT+CECALL=?	Test command reports the supported range of values for parameter **<type of eCall>**.

3.5.7.22.6. Embedded IVS inband modem enabling - #ECALL

#ECALL – Embedded IVS inband modem enabling	**SELINT 2**
AT#ECALL=<mode>	Set command enables/disables the embedded IVS modem. Parameters: **<mode>:** 0 – disable IVS (default) 1 – enables IVS **Note: This functionality has to be enabled only with**

	AT#CPUMODE=3 (only in 10.0X.XXX and 16.0X.XXX SW releases). Note: the sending of a MSD is pointed out with an unsolicited message through AT interface that can report the HL-ACK data bits or an error code in the following format: **#ECALLEV: <prim>,<data>** **<prim>:** 0 – Pull-IND 1 – Data_CNF 2 – AL-Ack 16 – sync loss **<data>:** Data content of Application Layer message (only with AL-Ack) Note: the value set by command is not saved and a software or hardware reset restores the default value. The value can be stored in NVM using profiles. Note: When IVS modem is enabled PCM playing, PCM recording and DTMF decoding are automatically disabled (AT#SPCM or AT#DTMF will return error). Note: **+CECALL** command supersedes this command because it enables automatically eCall functionality.
AT#ECALL?	Read command reports the currently selected **<prim>** in the format: **#ECALL: <mode>** **<mode>:** 0 – IVS disabled 1 – IVS enabled
AT#ECALL =?	Test command reports supported range of values for all parameters.

3.5.7.22.7. Set eCall Only mode - #ECONLY

#ECONLY – set eCall Only mode	**SELINT 2**
AT#ECONLY=<mode>	This command enables/disables the eCall Only mode of operation.

	Parameters: **<mode>:** 0 – disable eCall Only mode, normal mode 1 - enable eCall Only mode if eCall only subscription is available (default) 2 – enable eCall Only mode even if eCall only subscription is not available Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance. Note: the new setting can cause an automatic reboot of module.
AT#ECONLY?	Read command reports the currently selected **<mode>** and **<status>** in the format: **#ECONLY: <mode>,<status>** Parameters: **<status>:** 0 – eCall only mode doesn't apply 1 – eCall only mode applies 2 - eCall only mode applies, but T3242 or T3243 are running
AT#ECONLY=?	Test command reports the supported range of values for parameter **<mode>**.

3.5.7.22.8. Configure Network Deregister Timer - #ECALLNWTMR

#ECALLNWTMR – Configure Network Deregister Timer	**SELINT 2**
AT#ECALLNWTMR= [<DEREGISTER_TIMER>]	Set command sets timers which are related network deregistration Parameters: **<DEREGISTER_TIMER>** - integer Timer value in units of minutes: 1..2184 – Set the time after which the GSM and UMTS communication module terminates network registration (default value:720) Note: The setting is saved in NVM and available on following reboot.
AT# ECALLNWTMR?	Read command reports the current parameter value.
AT# ECALLNWTMR=?	Test command reports the supported range of values for parameters

3.5.7.23. Reconfigure eCall Timer - #ECALLTMR

#ECALLTMR - Reconfigure eCALL Timer	SELINT 2
AT#ECALLTMR= [<AL_ACK_PERIOD> ,<SIGNAL_DURATION> ,<SEND_MSD_PERIOD> ,<MSD_MAX_TRASMIT_TIME>]	Set command sets timers related eCall. Parameters: **<AL_ACK_PERIOD>** - integer Timer value in units of milliseconds: 1000..65535 – set AL-ACK Period (default value: 5000) **<SIGNAL_DURATION>** - integer Timer value in units of milliseconds: 1000.. 65535 – set the IVS initiation signal duration (default value: 2000) **<SEND_MSD_PERIOD>** - integer Timer value in units of milliseconds: 1000..65535 – set the SEND_MSD duration (default value: 5000) **<MSD_MAX_TRASMIT_TIME>** - integer Timer value in units of seconds: 10..65535 – set the maximum MSD transmission duration (Default value:20). If a value is omitted for a particular parameter then this parameter will be keep old set value Note: The setting is saved in NVM and available without reboot.
AT# ECALLTMR?	Read command reports the current parameter value.
AT# ECALLTMR=?	Test command reports the supported range of values for parameters

3.5.7.24. SSL Commands

3.5.7.24.1. Configure general parameters of a SSL socket - #SSLCFG

#SSLCFG – Configure general parameters of a SSL socket	SELINT 2
AT#SSLCFG=<SSId>, <cid>,<pktSz>, <maxTo>, <defTo>,<txTo>[, <sslSRingMode >[, <noCarrierMode >[, <UNUSED_1>[, <UNUSED_2>]]]]	This command allows configuring SSL connection parameters. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manages only one socket **<cid>** - PDP Context Identifier. 1 - Until now only context one is supported. **<pktSz>** - packet size to be used by the SSL/TCP/IP stack for data sending. 0 - select automatically default value (300). 1..1500 - packet size in bytes.

	<maxTo> - exchange timeout (or socket inactivity timeout); in online mode, if there's no data exchange within this timeout period the connection is closed. 0 - no timeout 1..65535 - timeout value in seconds (default 90 s.) **<defTo>** - Timeout that will be used by default whenever the corresponding parameter of each command is not set. 10…5000 - Timeout in tenth of seconds (default 100). **<txTo> -** data sending timeout; in online mode after this period data are sent also if they're less than max packet size. 0 - no timeout 1..255 - timeout value in hundreds of milliseconds (default 50). **<sslSRingMode> -** sslSRing unsolicited mode. 0 – SSLSRING disabled 1 – SSLSRING enabled in the format SSLSRING: <SSId>,<recData> where <SSId> is the secure socket identifier and <recData> is the amount of data received and decoded by the SSL socket. A new unsolicited is sent whenever the amount of data ready to be read changes. Only a record is decoded at once so, any further record is received and decoded only after the first have been read by the user by means of the **#SSLRECV** command. 2 – SSLSRING enabled in the format SSLSRING: <SSId>,<dataLen>,<data> where <SSId> is the secure socket identifier, <dataLen> is the length of the current chunk of data (the minimum value between the available bytes and 256) and <data> is data received (<dataLen> bytes) displayed in ASCII format. **<noCarrierMode> -** this parameter permits to choose NO CARRIER indication format when the secure socket is closed as follows: 0 – **NO CARRIER** (default) Indication is sent as usual, without additional information 1 – **NO CARRIER:SSL,<SSId>** Indication of current **<SSId>** secure socket connection is added. The fixed "SSL" string allows the user to distinguish secure sockets from TCP sockets 2 – **NO CARRIER:SSL,<SSId>,<cause>** Indication of current **<SSId>** secure socket connection and closure **<cause>** are added. Following the possible **<cause>** values are listed:

	0 – not available (secure socket has not yet been closed 1 – the remote TCP connection has been closed with a fatal error (RSTis included within this case) 2 – socket inactivity timeout 3 – network deactivation (PDP context deactivation from network) 4 – SSL "Close Notify Alert" message has been received 5 – SSL EOF condition occurred.It means that a TCP FIN has been received 6 – Closure due to any other SSL alert different from the previous ones. Note: if secure socket is not enabled using **#SSLEN** only test requests can be made. Read command can be issued if at least a <SSId> is enabled. Note: these parameters cannot be changed if the secure socket is connected. Note: these values are automatically saved in NVM.
AT#SSLCFG?	Read command reports the currently selected parameters in the format: **#SSLCFG: <SSId1>,<cid>,<pktSz>,<maxTo>,<defTo><txTo>,<sslSRingMode>,<noCarrierMode>,0,0**
AT#SSLCFG =?	Test command returns the range of supported values for all the parameters. **#SSLCFG: (1),(1),(0-1500),(0-65535),(10-5000),(0-255),(0-2),(0-2),(0),(0)**

3.5.7.24.2. Opening a socket SSL to a remote server - #SSLD

#SSLD – Opens a socket SSL to a remote server	**SELINT 2**
AT#SSLD=<SSId>,<rPort>,<IPAddress>,<ClosureType>[,<connMode>[,<Timeout>]]	Execution command opens a remote connection via socket secured through SSL. Both command and online modes can be used. In the first case '**OK**' is printed on success, and data exchange can be performed by means of #SSLSEND and #SSLRECV commands. In online mode '**CONNECT**' message is printed, and data can be sent/received directly to/by the serial port. Communication can be suspended by issuing the escape sequence (by default +++) and restored with #SSLO command. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket **<rPort>** - Remote TCP port to contact

	1..65535 **<IPAddress> -** address of the remote host, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx.xxx" - any host name to be solved with a DNS query **<ClosureType> -** how to close SSL socket 0 – SSL session id and keys are free then **AT#SSLFASTD** can't be used to recover the last SSL session [default]. 1 – SSL session id and keys are saved and a new connection can be made without a complete handshake using **AT#SSLFASTD**. **<connMode> -** connection mode 0 – online mode connection. 1 – command mode connection (factory default). **<Timeout> -** time-out in 100 ms units. It represents the maximum allowed TCP inter-packet delay. It means that, when more data is expected during the handshake, the module awaits <Timeout> * 100 msecs for the next packet. If no more data can be read, the module gives up the handshake and raises an ERROR response. Note: IT'S NOT the total handshake timeout or, in other words, it's not the absolute maximum time between the #SSLD issue and the CONNECT/OK/ERROR response. Though by changing this parameter you can limit the handshake duration (for example in case of congested network or busy server), there's no way to be sure to get the command response within a certain amount of time, because it depends on the TCP connection time, the handshake time and the computation time (which depends on the authentication mode and on the size of keys and certificates). 10..5000 - hundreds of ms (factory default is 100) Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: if timeout is not set for SSL connection the default timeout value, set by **AT#SSLCFG,** is used. Note: in online mode the socket is closed after an inactivity period (configurable with #SSLCFG, with a default value of 90 seconds), and the '**NO CARRIER**' message is printed. Note: in online mode data are transmitted as soon as the data packet size is reached or as after a transmission timeout. Both these parameters are configurable by using **#SSLCFG**. Note: if there are input data arrived through a connected socket and not yet

	read because the module entered **command mode** before reading them (after an escape sequence or after **#SSLD** has been issued with **<connMode>** set to **command mode connection)**, these data are buffered and we receive the **SSLSRING** URC (if any of its presentation formats have been enabled by means the **#SSLCFG** command); it's possible to read these data afterwards issuing **#SSLRECV**. Under the same hypotheses it's possible to send data while in **command mode** issuing **#SSLSEND.** Note: Before opening a SSL connection the GPRS context must have been activated by **AT#SGACT=1,1**. Note: Before opening a SSL connection, make sure to have stored the needed secure data (Certificate, CA certificate, private key), using **AT#SSLSECDATA**, for the security level set through **AT#SSLSECCFG**.
AT#SSLD=?	Test command returns the range of supported values for all the parameters: **#SSLD: (1),(1-65535),,(0,1),(0,1),(10-5000)**

3.5.7.24.3. Enabling a SSL socket - #SSLEN

#SSLEN – Enable a SSL socket	**SELINT 2**
AT#SSLEN=<SSId>,<Enable>	This command enables a socket secured by SSL Parameters: **<SSId>** - Secure Socket Identifier 1 – Until now SSL block manages only one socket **<Enable>** 0 – deactivate secure socket [default] 1 – activate secure socket Note: if secure socket is not enabled only test requests can be made for every SSL command except #SSLS (SSL status) which can be issued also if the socket is disabled. Read commands can be issued if at least a <SSId> is enabled. Note: these values are automatically saved in NVM. Note: a SSL socket cannot be disabled by issuing #SSLEN=1,0 if it is connected.
AT#SSLEN?	Read command reports the currently enable status of secure socket in the format: **#SSLEN: <SSId>,<Enable><CR><LF>** **<CR><LF>** **OK**

#SSLEN – Enable a SSL socket	SELINT 2
AT#SSLEN=?	Test command returns the range of supported values for all the parameters: **#SSLEN: (1),(0,1)**

3.5.7.24.4. Fast redial of a SSL socket - #SSLFASTD

#SSLFASTD – Fast redial of a SSL socket	SELINT 2
AT#SSLFASTD=<SSId>[, <connMode>[, <Timeout>]]	This command allows to restart the last SSL connection without a complete handshake. In this way the dial is performed faster and with a lower amount of tCP payload. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. **<connMode> -** connection mode 0 – online mode connection. 1 – command mode connection (factory default). **< Timeout > -** time-out in 100 ms units. It represents the TCP inter-packet delay. Note: it DOES NOT represent the total handshake timeout. 10..5000 - hundreds of ms (factory default is 100). Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: if timeout is not set for SSL connection the default timeout value, set by **AT#SSLCFG,** is used. Note: Before opening a SSL connection the GPRS context must have been activated by **AT#SGACT=X,1**. Note: if an error occurs during reconnection, the socket can not be reconnected and then a new connection has to be done. Note: if the remote server cleans SessionID cache before reconnection the full handshake will be made.
AT#SSLFASTD=?	Test command returns the range of supported values for all the parameters:

	#SSLFASTD: (1),(0,1),(10-5000)

3.5.7.24.5. Closing a SSL socket - #SSLH

#SSLH – Close a SSL socket	**SELINT 2**
AT#SSLH=<SSId>[, <ClosureType>]	This command allows closing the SSL connection. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. **< ClosureType >:** how to close SSL socket 0 – SSL session id and keys are free then **AT#SSLFASTD** can not be used to recover the last SSL session. 1 – SSL session id and keys are saved and a new connection can be made without a complete handshake using **AT#SSLFASTD.** Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: in client side if **< ClosureType >** is not set the value set into **AT#SSLD** is used.
AT#SSLH=?	Test command returns the range of supported values for all the parameters: **#SSLH: (1),(0,1)**

3.5.7.24.6. Restoring a SSL socket after a +++ - #SSLO

#SSLO – Restore a SSL socket after a +++	**SELINT 2**
AT#SSLO=<SSId>	This command allows to restore a SSL connection (online mode) suspended by an escape sequence (+++). After the connection restore, the **CONNECT** message is printed. Please note that this is possible even if the connection has been started in command mode (#SSLD with <connMode> parameter set to 1). Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: Before opening a SSL connection the GPRS context must

	have been activated by **AT#SGACT=X,1**. Note: if an error occur during reconnection the socket can not be reconnected then a new connection has to be done.
AT#SSLO=?	Test command returns the range of supported values for all the parameters: **#SSLO: (1)**

3.5.7.24.7. Reading data from a SSL socket - #SSLRECV

#SSLRECV – Read data from a SSL socket	**SELINT 2**
AT#SSLRECV=<SSId>, <MaxNumByte> [,<TimeOut>]	This command allows receiving data arrived through a connected secure socket, but buffered and not yet read because the module entered command mode before reading them. The module can be notified of these data by a SSLSRING URC, which enabling and presentation format depends on last #SSLCFG setting. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. **<MaxNumByte> -** max number of bytes to read 1..1000 **< Timeout > -** time-out in 100 ms units 1..5000 - hundreds of ms (factory default is 100) If no data are received the device respondes: #SSLRECV: 0<CR><LF> TIMEOUT<CR><LF> <CR><LF> OK If the remote host closes the connection the device respondes: #SSLRECV: 0<CR><LF> DISCONNECTED<CR><LF> <CR><LF> OK If data are received the device respondes: #SSLRECV: NumByteRead<CR><LF> ...(Data read)... <CR><LF> <CR><LF> OK

	Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: if timeout is not set for SSL connection the default timeout value, set through **AT#SSLCFG,** is used. Note: before receiving data from the SSL connection it has to be established using **AT#SSLD**.
AT#SSLRECV=?	Test command returns the range of supported values for all the parameters: **#SSLRECV: (1),(1-1000),(1-5000)**

3.5.7.24.8. Reporting the status of a SSL socket - #SSLS

#SSLS – Report the status of a SSL socket	**SELINT 2**
AT#SSLS=<SSId>	This command reports the status of secure sockets. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manages only one socket If secure socket is connected the device responds to the command: **#SSLS: <SSId>,2,<CipherSuite>** otherwise: **#SSLS: <SSId>,<ConnectionStatus>** <ConnectionStatus> available values are: 0 – Socket Disabled 1 – Connection closed 2 – Connection open Note: this command can be issued even if the <SSId> is not enabled.
AT#SSLS=?	Test command returns the range of supported values for all the parameters. #SSLS: (1)

3.5.7.24.9. Configuring security parameters of a SSL socket - #SSLSECCFG

#SSLSECCFG – Configure security parameters of a SSL socket	**SELINT 2**
AT#SSLSECCFG= <SSId>, <CipherSuite>, <auth_mode>	This command allows configuring SSL connection parameters. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket **<CipherSuite>** 0 - Chiper Suite is chosen by remote Server [default] 1 - TLS_RSA_WITH_RC4_128_MD5 2 - TLS_RSA_WITH_RC4_128_SHA 3 - TLS_RSA_WITH_AES_256_CBC_SHA **<auth_mode>** 0 - SSL verify none [default] 1 - Manage server authentication 2 - Manage server and client authentication if requested by the remote server Note: if SSL verify none is set no security data are needed(Client certificate, Server CAcertificate and Client private key). Note: if only server authentication is managed then Server CAcertificate has to be stored through **AT#SSLSECDATA**. Note: if server and client authentication are managed then client certificate and private key, and server CAcertificate have to be stored through **AT#SSLSECDATA**. Please note that private keys with password are not supported, Note: only “rsa_sign” certificates are supported by the Telit Module in client authentication. The remote server must support this certificate type, otherwise the handshacke will fail. Note: if secure socket is not enabled using **#SSLEN** only test requests can be made. Read command can be issued if at least a <SSId> is enabled. Note: these values are automatically saved in NVM.
AT#SSLSECCFG?	Read command reports the currently selected parameters in the format: **#SSLSECCFG: <SSId1>,<CipherSuite>,<auth_mode>**
AT#SSLSECCFG =?	Test command returns the range of supported values for all the parameters.

3.5.7.24.10. Managing the security data - #SSLSECDATA

#SSLSECDATA – Manage the security data	SELINT 2
AT#SSLSECDATA =<SSId>,<Action>, <DataType>[,<Size>]	This command allows to store, delete and read security data (Certificate, CAcertificate, private key) into NVM. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manages only one socket. **<Action>** - Action to do. 0 – Delete data from NVM. 1 – Store data into NVM. 2 – Read data from NVM . **<DataType>** 0 – Certificate. 1 – CA certificate. 2 – RSA Private key. **<Size>** - Size of security data to be stored 1..2047 If the **<Action> parameter** is 1 (store data into NVM) the device responds to the command with the prompt '>' and waits for the data to store. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If data are successfully stored, then the response is OK; if it fails for some reason, an error code is reported. If the **<Action>** parameter is 2 (read data from NVM), data specified by **<DataType>** parameter is shown in the following format: **#SSLSECDATA: <connId>,<DataType>** **<DATA>** **OK** If **<DataType>** data has not been stored (or it has been deleted) the response has the following format: **#SSLSECDATA: <connId>,<DataType>** **No data stored** **OK**

	Note: Secured data has to be in PEM format. Note: private keys with password ARE NOT supported. Note: only "rsa_sign" certificates are supported by the Telit Module in client authentication. The remote server must support this certificate type, otherwise the handshacke will fail. Note: **<size>** parameter is mandatory if the <write> action is issued, but it has to be omitted for <delete> or <read> actions are issued. Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: If socket is connected an error code is reported.
AT#SSLSECDATA?	Read command reports what security data are stored in the format: **#SSLSECDATA: <SSId 1>,<CertIsSet>,<CAcertIsSet>,<PrivKeyIsSet>** <CertIsSet>, <CAcertIsSet>, <PrivKeIsset> are 1 if related data are stored into NVM otherwise 0.
AT#SSLSECDATA =?	Test command returns the range of supported values for all the parameters: **#SSLSECDATA: (1),(0-2),(0-2),(1-2047)**

3.5.7.24.11. Sending data through a SSL socket - #SSLSEND

#SSLSEND – Send data through a SSL socket	**SELINT 2**
AT#SSLSEND=<SSId>[, < Timeout >]	This command allows sending data through a secure socket. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. **< Timeout > - socket send timeout**, in 100 ms units. 1..5000 - hundreds of ms (factory default is 100) The device responds to the command with the prompt '>' and waits for the data to send. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).

	If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported Note: the maximum number of bytes to send is 1023; trying to send more data will cause the surplus to be discarded and lost. Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: if timeout is not set for SSL connection the default timeout value, set by **AT#SSLCFG,** is used. Note: Before sending data through the SSL connection it has to be established using **AT#SSLD**.
AT#SSLSEND=?	Test command returns the range of supported values for all the parameters: **#SSLSEND: (1),(1-5000)**

3.5.7.24.12. Sending data through a secure socket in Command Mode extended - #SSLSENDEXT

#SSLSENDEXT – Send data through a secure socket in Command Mode extended	**SELINT 2**
AT#SSLSENDEXT= <SSId>,<bytestosend>[, <Timeout>]	This command allows sending data through a secure socket. Parameters: **<SSId>** - Secure Socket Identifier 1 - Until now SSL block manage only one socket. **<bytestosend>** - number of bytes to be sent Please refer to test command for range **<Timeout> -** time-out in 100 ms units 1..5000 - hundreds of ms (factory default is 100) The device responds to the command with the prompt '>' <greater_than><space> and waits for the data to send. When **<bytestosend>** bytes have been sent, operation is automatically completed. If data are successfully sent, then the response is **OK**. If data sending fails for some reason, an error code is reported. Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made. Note: if timeout is not set for SSL connection the default timeout value,

	set by **AT#SSLCFG,** is used. Note: Before sending data through the SSL connection it has to be established using **AT#SSLD.** Note: all special characters are sent like a generic byte. (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted).
AT#SSLSENDEXT =?	Test command returns the range of supported values for parameters **<SSId>** , **<bytestosend>** and **<Timeout>**. **#SSLSENDEXT: (1),(1-1500),(1-5000)**
Example	Open the socket in command mode: at#ssld=1,443,<port>,"IP address",0,1 OK Give the command specifying total number of bytes as second parameter: at#sslsendext=1,256,100

3.5.7.25. m2mAIR Cloud Commands

3.5.7.25.1. Configure deviceWISE parameters - #DWCFG

#DWCFG – configure deviceWISE parameters	SELINT 2
AT#DWCFG=[<serverUrl>[,<deviceIDSelector>[,<appToken>[,<security>[,<heartBeat>[,<autoReconnect>[,<overflowHandling>[,<atrunInstanceId>[,<serviceTimeout>[,<contextID>[,<unused_1>[,<unused_2>]]]]]]]]]]]]	1 – auto-reconnect lazy - reconnect on next send and every 3600 seconds. 2 – auto-reconnect moderate (default) - reconnect 120 seconds, then every 3600 seconds after the first day. 3 – auto-reconnect aggressive - reconnect every 120 seconds. <overflowHandling> - Flag indicating if the way to handle overflows in data management. 0 – FIFO (default) 1 – LIFO <atrunInstanceId> - AT instance that will be used by the service to run the AT Command. Default 4 Range 0 – 4 <serviceTimeout> - It defines in seconds the maximum time interval for a service request to the server. Default 5 Range 1 – 120 <contextID> - the PDP context used for the network connection. Default 1 Range 1 – 5
AT#DWCFG?	Read command returns the current settings in the format: **#DWCFG:** **<serverUrl>,<deviceIDSelector>,<appToken>,<security>,<heartBeat>,<autoReconnect>,<overflowHandling>,<atrunInstanceId>,<serviceTimeout>,<contextID>,0,0**
AT#DWCFG=?	Test command returns the supported range of parameters **<deviceIDSelector>**, **<security>**, **<heartBeat>**, **<AutoReconnect>**, **<overflowHandling>**, **<atrunInstanceId>** , **<serviceTimeout>**,**<contextID>**, **<unused_1>** and **<unused_2>**, and the maximum length of **<serverUrl>** and **<appToken>** parameters.

3.5.7.25.2. Connect to M2M Service - #DWCONN

#DWCONN – connect to M2M Service	SELINT 2
AT#DWCONN=<connect>	Set command connects/disconnects to the M2M Service.

	Parameters: **<connect>** - flag to connect/disconnect to the M2M Service 0 – disconnect (default) 1 – connect Note: **AT#DWCONN=1** performs the socket connection and the MQTT connection. **AT#DWCONN=0** performs the socket disconnection. Note: the PDP Context used for the network connection is the first (**<cid>**=1 has to be previously defined with **AT+CGDCONT** command and activated with **AT#SGACT** command) Note: if the secure mode connection has been enabled, it cannot be used contemporarily to any command starting an SSL connection (including SSL sockets, FTPS, secure SMTP and HTPS).
AT#DWCONN?	Read command returns the current settings for all parameters in the format: **#DWCONN: <connect>>,<status>** Where: **<connect>** is defined as above **<status>** is the real connection status. Values: 0 = disconnected 1 = trying to connect 2 = connected 3 = waiting to connect
AT#DWCONN=?	Test command reports the supported range of values for all parameters

3.5.7.25.3. Query connection status - #DWSTATUS

#DWSTATUS – query connection status	**SELINT 2**
AT#DWSTATUS	Execution command returns the status of the connection, including some runtime statistics. Note, all statistics should be stored in RAM, not NVM. The Cloud will return a generic structure **#DWSTATUS: <connected><lastErrorCode>,<latency>,<pktsIn>,<pktsOut>,<bytesIn>,<bytesOut>** **<connected>** : 3 = waiting to connect, 2 = connected, 1 = trying to connect, 0 = disconnected

	<lastErrorCode>: last error code encountered by the client **<latency> :** milliseconds measured between last request and reply. **<pktsIn> :** number of packets received, tracked by the server **<pktsOut> :** number of packets sent. **<bytesIn>** : number of bytes received, TCP/IP payload **<bytesOut>** : number of bytes sent.
AT#DWSTATUS=?	Test command reports **OK** result code

3.5.7.25.4. Send data to M2M Service - #DWSEND

#DWSEND – send data to M2M Service	**SELINT 2**
AT#DWSEND=<type>,<param_1>[,<param_2>[,…[,param_n]]]	Execution command permits to send formatted data to the M2M Service. Parameters: **<type>** - type code for the type of message to send. 0 - normal request 1 - method request 2 - method update 3 - method ack The meaning of the following parameters (**<param_1>** … **<param_n>**) changes depending on the value of the first parameter **<type>**: **Type 0 message format (API execution request):** **<param_1>** - command – the API command to execute. **<param_2+>** - string parameters required by the method, in the format <*key_i*>,<*value_i*>. They are key-value pairs indicating the i-th parameter, with i=0,…,12. If the current API does not require input variables, these parameters can be omitted. **Type 1 message format (remote method execution request):** **<param_1>** - *"thingKey"* – the key of a thing to execute. **<param_2>** - *timeout* – time to wait in milliseconds before returning an error for the request. **<param_3>** - *method* – the method key of a thing to execute. **<param_4>** - is *singleton* – 0 or 1. 1 if no more than one of these instances can exist. **<param_5+>** - string parameters required by the method, in the format <*key_i*>,<*value_i*>. They are key-value pairs indicating the i-th parameter, with i=0,…,10. If the current method does not require input variables, these parameters can be omitted. **Type 2 message format (method update):**

#DWSEND – send data to M2M Service	SELINT 2
	<param_1> - *id* – the identification of the method instance. **<param_2>** - *message* – a message represents the current status of the method. **Type 3 message format (method acknowledgement):** **<param_1>** - *id* – the identification of the method instance. **<param_2>** - *status* – the integer result status for the execution. 0 is reserved for OK. **<param_3 when status is set to non-zero>** - error message associated with the status. **<param_3+ when status is set to zero>** - return parameters of the method. Key-value pairs should be used. *param_i* should be the name of the element and *param_i+1* should be the value of the element. If the current method does not require output variables, these parameters can be omitted. Note: there is no limit on the length of the single **<param_i>**, but there is a limit in the total length of the AT command string, that cannot exceed 400 characters. If this threshold is exceeded, then an ERROR is raised. There is also a limit of 20 messages on the receive queue. If the queue is full, the consequent send will still succeed but the response for that particular request will be dropped until an item is removed from this queue (See command AT#DWRCV and AT#DWRCVR). Note: the response to the **AT#DWSEND** command reports the **<msgId>** value that identifies the sending. Note: if data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported. Note: it's possible to use **AT#DWSEND** only if the connection has been opened with **AT#DWCONN.**
AT#DWSEND=?	Test command reports the maximum length of **<type>** parameter.

3.5.7.25.5. Send raw data to deviseWISE server - #DWSENDR

#DWSENDR – send raw data to M2M Service	SELINT 2
AT#DWSENDR=<dataLen>	Execution command permits to send raw data to the M2M Service. Content must be valid JSON. Parameters: **<dataLen>** - number of bytes to be sent Range: 1 - 1500 The module responds to the command with the prompt <greater_than><space> and waits for the data to send. When **<dataLen>** bytes have been sent, operation is automatically completed.

	If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported. Note: the response to the **AT#DWSENDR** command reports the **<msgId>** value that identifies the sending. There is also a limit of 20 messages on the receive queue. If the queue is full, the consequent send will still succeed but the response for that particular request will be dropped until an item is removed from this queue (See command AT#DWRCV and AT#DWRCVR). Note: it's possible to use **AT#DWSENDR** only if the connection has been opened with **AT#DWCONN**
AT#DWSENDR=?	Test command reports the supported range of values for **<dataLen>** parameter

3.5.7.25.6. Receive data from deviseWISE server - #DWRCV

#DWRCV – Receive data from M2M Service	**SELINT 2**
AT#DWRCV=<msgId>	Execution command permits the user to read formatted data arriving from M2M Service; the module is notified of these data by the URC **#DWRING**. Parameters: **<msgId>** - index of the data message to receive, as indicated in the URC **#DWRING** Range: >=1 If the received data are the consequence of a previous data sending issued by **AT#DWSEND**, then the **<msgId>** value is the same of the **<msgId>** value reported in the answer of **AT#DWSEND**. The incoming Server data are notified by the URC **#DWRING** with the following format: **#DWRING: <type>,<msgId>,<len>** where: **<type>** - type of message to receive **<msgId>** - index of the data message to receive **<len>** - length of data message to receive If the incoming data are accepted with **AT#DWRCV**, then the formatted data are received and showed with the following URC: **#DWDATA:** **<msgId>,<error>,<len>,<param_1>[,<param_2>[,…[,<param_n>]]]**

#DWRCV – Receive data from M2M Service	SELINT 2
	where: **<msgId>** - defined as above <**error**> - error code of the message to receive, 0 if there is no error. **<len>** - defined as above **<param_i>** - string parameter indicating the i-th parameter associated to the type specified Note: it is possible to use **AT#DWRCV** only if the connection has been opened with **AT#DWCONN**, else the ME is raising an error. If the data received are the consequence of a previous data sending issued by **AT#DWSEND**, then they can be read only using **AT#DWRCV** command and not **AT#DWRCVR** command (i.e.: **AT#DWRCV** and **AT#DWRCVR** are not interchangeable).
AT#DWRCV=?	Test command reports the supported range of values for all parameters.

3.5.7.25.7. Receive raw data from deviseWISE server - #DWRCVR

#DWRCVR – Receive raw data from M2M Service	SELINT 2
AT#DWRCVR=<msgId>	Execution command permits the user to read raw data arriving from M2M Service; the module is notified of these data by the URC **#DWRING**. Parameters: **<msgId>** - index of the data message to receive, as indicated in the URC **#DWRING** Range: >=1 If the data received are the consequence of a previous data sending (issued by **AT#DWSENDR**), then the **<msgId>** value is the same of the **<msgId>** value reported in the answer of **AT#DWSENDR**. The incoming Server data are notified by the URC **#DWRING** with the following format: **#DWRING: <type>,<msgId>,<len>** where: **<type>** - type of the data message to receive **<msgId>** - index of the data message to receive **<len>** - length of data message to receive If the incoming data are accepted with **AT#DWRCVR**, then the data are received and showed with the following URC:

#DWRCVR – Receive raw data from M2M Service	SELINT 2
	#DWRDATA: <msgId>,<error>,<len>,<data> where: **<msgId>** - defined as above **<error>** - error code of the message to receive, 0 if there is no error. **<len>** - defined as above **<data>** - M2M Service data Note: it is possible to use **AT#DWRCVR** only if the connection has been opened with **AT#DWCONN**, else the ME is raising an error. If the data received are the consequence of a previous data sending issued by **AT#DWSENDR**, then they can be read only using **AT#DWRCVR** command and not **AT#DWRCV** command (i.e.: **AT#DWRCV** and **AT#DWRCVR** are not interchangeable).
AT#DWRCVR=?	Test command reports the supported range of values for all parameters.

3.5.7.25.8. List information on messages pending from deviseWISE server - #DWLRCV

#DWLRCV – List information on messages pending from M2M Service	SELINT 2
AT#DWLRCV	Execution command permits the user to obtain information regarding the messages pending from M2M Service in the following format: **#DWLRCV:** **<msg_number>[,<msgId_1>,<msg_1_len>[,<msgId_2>,<msg_2_len>[,……<msgId_n>,<msg_n_len>]]]** where: **<msg_number>** - number of messages pending from M2M Service Range: >=0 **<msgId_i>** - index of the i-th data message to receive **<msg_i_len>** - length of the i-th data message to receive Note: it is possible to use **AT#DWLRCV** only if the connection has been opened with **AT#DWCONN**, else the ME is raising an error.
AT#DWLRCV=?	Test command reports **OK** result code

3.5.7.25.9. Enable agentfeatures - #DWEN

#DWEN – enable agent features	SELINT 2
AT#DWEN=<feat>,<en>[,<op	Set command permits to enable/disable up to 8 different deviceWISE

tion1>[,<option2>[,<option3>[,<option4>[,<option5>]]]]]	features. Parameters: **<feat>** - feature to enable or disable; range (0-7) 0 – remote at commands 1 … 7 – reserved for future use. **<en>** - enable or disable the features 0 – disable the feature 1 – enable the feature **<optionX>** where X=1,..,5 - optional parameters depending on the feature (string) Note: feature 0 (Remote AT commands) has no option. Note: the **<en>** value is considered only at the very first connection to M2M Service (**AT#DWCONN=1**) after a device power on or reboot.
AT#DWEN?	Read command returns the current settings for each feature in the format: **#DWEN:** **<feat>,<en>,<option1>,<option2>,<option3>,<option4>,<option5>**
AT#DWEN=?	Test command reports the supported range of values for parameters **<feat>** and **<en>** and the maximum length of **<optionX>** (where X=1,..,5) parameters

4. List of acronyms

ARFCN	Absolute Radio Frequency Channel Number
AT	Attention command
BA	BCCH Allocation
BCCH	Broadcast Control Channel
CA	Cell Allocation
CBM	Cell Broadcast Message
CBS	Cell Broadcast Service
CCM	Current Call Meter
CLIR	Calling Line Identification Restriction
CTS	Clear To Send
CUG	Closed User Group
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DCS	Digital Cellular System
DGPS	Differential GPS, the use of GPS measurements, which are differentially corrected
DNS	Domain Name System
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi Fraquency
DTR	Data Terminal Ready
GGA	GPS Fix data
GLL	Geographic Position – Latitude/Longitude
GLONASS	Global positioning system maintained by the Russian Space Forces
GMT	Greenwich Mean Time
GNSS	Any single or combined satellite navigation system (GPS, GLONASS and combined GPS/GLONASS)
GPRS	Global Packet Radio Service
GPS	Global Positioning System
GSA	GPS DOP and Active satellites
GSM	Global System Mobile
GSV	GPS satellites in view
HDLC	High Level Data Link Control
HDOP	Horizontal Dilution of Precision
IMEI	International Mobile Equipment Identity
IMSI	International Mobile Subscriber Identity
IP	Internet Protocol
IRA	International Reference Alphabet
IWF	Interworking Function
ME	Mobile Equipment
MO	Mobile Originated

MT	*either* Mobile Terminated *or* Mobile Terminal
NMEA	National Marine Electronics Association
NVM	Non Volatile Memory
PCS	Personal Communication Service
PDP	Packet Data Protocol
PDU	Packet Data Unit
PIN	Personal Identification Number
PPP	Point to Point Protocol
PUK	Pin Unblocking Code
RLP	Radio Link Protocol
RMC	Recommended minimum Specific data
RTS	Request To Send
SAP	SIM Access Profile
SCA	Service Center Address
SMS	Short Message Service
SMSC	Short Message Service Center
SMTP	Simple Mail Transport Protocol
TA	Terminal Adapter
TCP	Transmission Control Protocol
TE	Terminal Equipment
UDP	User Datagram Protocol
USSD	Unstructured Supplementary Service Data
UTC	Coordinated Universal Time
VDOP	Vertical dilution of precision
VTG	Course over ground and ground speed
WAAS	Wide Area Augmentation System

5. Document History

Revision	Date	SW release	Changes
ISSUE #0	2006-08-04	7.02.01	Initial release
ISSUE #1	2006-10-26	7.02.02	3.2.2.1 +CME ERROR: - ME Error Result Code: updated 3.2.2.2 +CMS ERROR - Message Service Failure Result Code: updated 3.2.6 Factory and user profile: updated -"GPS Commands Set" total update -updated the following commands description under SELINT 0, SELINT 1 and SELINT 2 paragraph: +COPN, +CCFC, +CCWA, +CPIN, +CIND, +CNMI, +COPS, +CMEE, #SKTD, #AUTOATT, +CALA, +CAOC, +CACM, +CAMM, +CPUC, S12 -updated under SELINT 0 and SELINT 1 command +CPAS, #FTPOPEN, \Q, #CSURV, #CSURVC -updated the following commands only under SELINT 2: +CMUX, +CLCC, +CMGL, +CMGR, #LSCRIPT -removed from the AT commands table under SELINT 0 and SELINT 1 the following commands: #CBC and #EMAILMSG -added new commands (for SELINT 2): #EXECSCR, #STARTMODESCR
ISSUE #2	2007-03-16	7.02.03	-Revision of the whole document form. -Added new commands: #ENS, +WS46, +CPOL, +PACSP, #SPN, #SLED, #SLEDSAV, #VAUXSAV, #V24CFG, #V24, #AXE, #ACALEXT, #MBN, #MWI, #SPKMUT, multisocket commands, SIM toolkit commands, $GPSS, $GPSCON, $GPSPRG, $GPSPS, $GPSWK -3.2.6 Factory and user profile: updated -Removed AT commands for camera and #I2S1 -Updated following AT commands: +CNUM, +CPIN, +CPBW, +CPBS, +CLIP, #STGI, #FTPOPEN, $GPSACP,
ISSUE #3	2007-08-10		Update list of products to which this document can be applied
ISSUE #4	2007-11-19	7.02.04	Added new commads: #CEER, #SMSMODE, #Z, #TEMPMON, #HFRECG, #HSRECG, #PRST, #PSEL, #PSAV, #PSET, #SHFAGC, #SHFNR, #SHSAGC, #SHSEC, #SHSNR, #SHSSD, #GSMAD, #CSURVP, #CSURVPC Added: 3.5.7.12 Telefonica OpenGate M2M AT Commands Set
ISSUE #5	2008-07-09	7.02.05 / 7.03.00	modified description of AT#SD and AT#SL, … New commands +CGEREP, #TSVOL, #REGMODE #TXMONMODE, #SIMDET, #ENHSIM #TTY, #CPUMODE, #GSMCONT #CGPADDR, #NWSCANTMR, #OSC32KHZ #CACHEDNS, #DNS, #ICMP #TCPMAXDAT, #TCPREASS
ISSUE #6	2009-08-03	SW	– Applied new layout.

		7.03.01 / 7.02.06 SW 10.0.1	– Deleted ME Error Result Code [566 – 573] (§3.2.2.1) – Reorganized the availability table (merged columns by family of product, exported GPS commands to their own table). – Updated the commands whose values are automatically stored in NVM. Specified those for the SW 10.xx.xxx platform. – Added/edited the following commands: #ACAL, #ATRUN, #AXE, #BIQUADIN, #CCLK, #CEER, #CESTHLCK, #CFLO, #CGDATA, #CGPADDR, #CPASMODE, #EMAIL, #EVMONI, #SMSATRUN, #SMSATRUNCFG, #SMSATWL, #TCPATRUNCFG, #TCPATRUNL, #TCPATRUNFRWL, #TCPATRUNAUTH, #TCPATRUND, #TCPATRUNCLOSE, #TCPATRUNCMDSEQ, #TCPATCONSER, #ATRUNDELAY, #ENAEVMONI, #ENAEVMONICFG, #FASTCCID, #FTPAPP, #FTPFSIZE, #FTPGET, #FTPGETPKT, #FTPPUT, #FTPRECV, #FTPREST, #GPIO, #GPPPCFG, #GSMAD, #GSMCONT, #HFMICG, #HFRECG, #HSMICG, #HSRECG, #I2CWR, #I2CRD, #JDR, #LCSCRIPT, #MONI, #NITZ, #OAP, #OTASNAP, #OTASUAN, #CMGS, #CMGW, #PING, #PSMRI, #QSS, #REBOOT, #SA, #SCFG, #SCFGEXT, #SD, #SERVINFO, #SGACTAUTH, #SGACTCFG, #SIMDET, #SKTD, #SKTL, #SL, #/, #SLUDP, #SMOV, #SPCM, #SRECV, #SS, #SSEND, #STARTMODESCR, #SWLEVEL, #TEMPMON, #TONEEXT, #TSVOL, #VAUX, #V24MODE, #V24CFG, #Z, $GPSACP, $GPSAP, $GPSCON, $GPSPS, $GPSWK, +CCLK, +CEER, +CFUN, +CGPADDR, +CGSMS, +CMGD, +CMGW, +CNMI, +CPBS, +CSMP, +DS, +VTS, S0. – Deleted commands: AT\B, AT\K, AT\N. – Specified SW10.xx.xxx default values
ISSUE #7	2010-05-07	SW 7.03.02 / 7.02.07 SW 10.0.2	– New commands added for SW 7.03.02 / 7.02.07: #SCFGEXT2, #CMGLCONCINDEX, #CODECINFO, #GSMCONTCFG, #SNUM, #SSENDEXT, +CMAR – New commands added for SW 10.0.2: #PADFWD, #PADCMD; new parameters for CFUN: CFUN=1,1 – Updated Timeout Table par. 3.2.4 – Removed note 18 – Updated Table Factory Profile and User Profile par. 3.3.1 – Deleted commands: &G, &Q – Updated commands: #JDR, #FTPDELE, +CNMI, #CMGW, #OTASUAN, #I2CWR, #I2CRD, #ATS38, #GSMAD, +CFUN, &D, #E2ESC, #TXMONMODE, #SNUM, #STIA, #FTPFSIZE, #COPSMODE, # SCFGEXT, #SCFGEXT2, #SD, #SELINT, #ADC, #DVI, #EMAILD, #EVMONI, #GPPPCFG, #MSCLASS, #SEMAIL, #SPCM, #SWLEVEL, #TONEEXT, #UDTSET, +CMER, #E2ESC, #SLUDP, #SIMATR
ISSUE#8	2010-07-26	SW 7.03.02 / 7.02.07	– Updated commands: #SCFGEXT2, S38, #SEMAIL, #EMAILD, #CSURVF, +CMAR, #CCLK, +CMGL, +CFUN, #FTPOPEN, #OTASNAP, #OTASUAN, #AUTOBND, #STIA, #STGI, +CLCC, +CNMI, +CPMS, +CSAS, #PLMNMODE, #SMSMODE,

		SW 10.0.3	#REGMODE, #AUTOBND, #ENHSIM, #SWLEVEL, #NITZ, #STIA, #JDR, #TSVOL – New commands added for SW 10.0.3: +CPLS, +CGCMOD, #STTA, #CMEEMODE, #SGACTCFGEXT, #BASE64, #CEERNET, #ENHRST, #SII, #OTASETRI – Updated references specification from 07.05, 07.07, 03.40 to 27.005, 27.007, 23.040, etc
ISSUE#9	2010-10-04	SW 10.0.4	– Added GL865-DUAL to the applicability table and the matrix
ISSUE#10		SW 7.03.02 / 7.02.07 SW 10.0.4	– New commands added for SW 10.0.4: #MSDPUSH, #MSDSEND, +CECALL, #SYSHALT, #SIMINCFG, #EMRGD, #BIQUADINEX, #BIQUADOUTEX, #TXCNI, #DTMF, #DTMFCFG, #OTAIPCFG, #OTAIPUPD, #OTASNAPIP, #OTASNAPIPCFG, #HFCFG, #SMTPCL – Modified par 3.3.1 and 3.2.4 – Edited #DNS command description – Updated tab at 3.5.2.1 – Reorganized the matrix
ISSUE #11	2011-07-12	SW 7.03.03 / 7.02.08 SW 10.0.5	– Modified commands: #CAP, #CSURV, #CSURVC, #EVMONI, #FTPGETPKT, #QDNS, #DTMF, $GPSACP, $GPSAT, $GPSCON, $GPSNMUN, $GPSP, $GPSPS, $GPSR, $GPSSW, $GPSWK – New commands: #ALARMPIN, #CFF, #SSENDUDP, #SSENDUDPEXT, #ST – New paragraph added “SSL commands” 3.5.7.17 : #SSLCFG, #SSLD, #SSLEN, #SSLFASTD, #SSLH, #SSLO, #SSLRECV, #SSLS, #SSLSECCFG, #SSLSECDATA, #SSLSEND
ISSUE #12	2011-09-09	SW 7.03.03 / 7.02.08 SW 10.0.5	– Updated #SIMDET, #JDR, #NITZ,#PLMNMODE, #REGMODE, #SERVINFO, #SMSMODE, #SSLSECDATA, #STIA, #SWLEVEL, #TEMPMON, +CGREG, +CSSN – Edited par 3.4 Command Availability Table
ISSUE #13	2012-03-20	SW 7.03.03 / 7.02.08 SW 10.0.5 SW 13.00.000	– Added GE910-QUAD in the availability table. – Specified 13.00.000 parameter in AT#CODEC command description (SELINT=2)
ISSUE #14	2012-08-20	SW 7.03.03 / 7.02.08 SW 10.0.6 SW 13.00.002	– New: #BNDLOCK, #BUZZERMODE, #CHUP, #DVIEXT, #ENCALG, #FTPAPPEXT, #FTPCFG, #GPPPCFGEXT, #JDRENH, #RS485, #SLASTCLOSURE, +CSVM, #NTP, $FTPGETIFIX, $GPSGPIO, $GPSIFIX – Updated: #AUTOBND, #AXE, #CODEC, #DTMF, #DTMFCFG, #ENS, #FTPAPP, #FTPPUT, , #I2CRD, #I2CWR, #SCFGEXT, #SERVINFO, #SMSMODE, #SRECV, #SSEND, #SSENDUDP, #SSLD, #TXCNI, $GPSACP, #GPSAT, $GPSCON, $GPSD, $GPSNMUN, $GPSP, $GPSPS, $GPSR, $GPSRST, $GPSSAV, $GPSSW, $GPSWK, +CGDCONT, +CMUX, +CSMP, +CSQ, #SD,

			#SL, #SKTSET, #SKTD, #SKTL, @SKTL, +FMI, +FMM, +FMR, +FTS, +FRS, +FTM, +FRM, +FTH, +FRH, +FLO, +FPR, +FDD, +CBST, +CRLP, #TTY
ISSUE # 15	2012-10-18	SW 7.03.03 / 7.02.08 SW 10.0.6 SW 13.00.002	– Edited par 3.2.2.1 ME Error Result Code - +CME ERROR: <err> – Edited par 3.3.1 Factory Profile And User Profiles – Edited par 3.4 Command Availability Table – Updated: #FTPAPP, #FTPPUT, #SCFGEXT, #SGACTAUTH, #SLED, #SRECV, +IPR, #STIA
ISSUE # 16	2013-02-07	SW 7.03.03 / 7.02.08 SW 10.0.xx7 16.00.xx2 SW 13.00.xx3	– Added GL865-DUAL V3, GL868-DUAL V3 in the availability table – Edited par 3.2.4 and 3.3.1 – Edited par 3.4 Command Availability Table – New: #CONSUME, #CSURVTA, #RFSTS, #HTTP*, #FRWLIPV6, #MMS*, #SSLSENDEXT, #ECHOCFG, #CMUXMODE, #PORTCFG – Updated: #DTMF, #LCSCRIPT, #NWDNS, #SCFGEXT2, #SLASTCLOSURE, #SPCM, #STARTMODESCR, #WAKE, $FTPGETFIX, $GPSACP, $GPSAT, $GPSCON, $GPSD, $GPSGPIO, $GPSFIX, $GPSNMUN, $GPSP, $GPSPS, $GPSR, $GPSRST, $GPSSAV, $GPSSW, $GPSWK, #CSURV*, +CFUN, +CMUX, +IPR, #ENAUSIM, #SNUM, #SMTPCL, #FTPCFG, #JDRENH, #SGACT, #EVMONI, #SSLD, #SSLSECCFG
ISSUE # 17	2013-05-24	SW 10.0.xx7 16.00.xx2 SW 13.00.xx4	– Added GE910-GNSS in the availability table, deleted GM862 and GE863 families – Edited par 3.2, 3.2.4, 3.5.3.6 – Updated: #DNS, #FTPCFG, #GPIO, #MONI, #SCFGEXT2, #SPN, #WAKE, +CMUX, #MMSSNH, $FTPGETIFIX, $GPSACP, $GPSAT, $GPSCON, $GPSD, $GPSGPIO, $GPSIFIX, $GPSNMUN, $GPSP, $GPSPS, $GPSR, $GPSRST, $GPSSAV, $GPSSW, $GPSWK, – New: $HTTPGETIFIX, $GPSSERSPEED, $DPATCH, $EPATCH, $LPATCH, $WPATCH
ISSUE # 18	2013-09-23	SW 10.0.xx8 16.00.xx3 SW 13.00.xx5	– Added GE910-QUAD V3 and GL865-QUAD V3 in the availability table – Edited par 3.4, 3.5.2.1 – Updated: #AUTOATT, #CPUMODE, #CSURVTA, #ENAEVMONICFG, #ENAUSIM, #FTPCFG, #SCFGEXT2, #SD, #SGACT, #SNUM, #SSLSECCFG, #SMSATRUNCFG, #TCPATRUNCFG, $DPATCH, $EPATCH, $FTPGETIFIX, $GPSACP, $GPSAT, $GPSCON, $GPSD, $GPSGPIO, $GPSIFIX, $GPSNMUN, $GPSP, $GPSPS, $GPSSERSPEED, $GPSSW, $GPSWK, $HTTPGETIFIX, $LPATCH, $WPATCH, +CCLK, #CCLK, +CNUM, +CPBF, +CPBR, +CPBW, +CSCS, +CMGL, +CMGR, +CMGS, +CMGW, +CUSD, +PACSP, #DVI, #DVIEXT, #ECHOCFG, #LCSCRIPT, #PING, #HTTPSND, #HTTPQRY, #TCPREASS, #BND

			– New: #FILEPWD, #FPLMN, #IPCONSUMECFG, #NCIH, #SCFGEXT3, #SSENDLINE, #RSASECDATA, #RSAENCRYPT, #RSADECRYPT, #RSAGETRESULT, #SAMR, #SAMRCFG, #GPIO, #PORTCFG
ISSUE# 19	2014-03-21	SW 10.01.xx0 16.01.xx0 SW 13.00.xx6	– Added GE866-QUAD and GE910-QUAD AUTO to the Applicability Table – Updated par 3.4 AT Commands Availability Table – Updated: #GPIO (changed character □ with -), #CONSUMECFG, #ENCALG, #EVMONI, #FILEPWD, #GPIO, #HTTPCFG, #HTTPQRY, #HTTPRCV, #HTTPSND, #STIA, #STGI, #STSR, #DVIEXT, #DIALMODE, #PORTCFG, $GPSACP, #V24MODE, +CSIM, +CALA – New: #APPSKTCFG, #ATDELAY, #MONIZIP, #SMTPCFG, $HTTPGETSTSEED, $INJECTSTSEED, +CCED, #BCCHLOCK, #ESMTPPORT, #PCLFIX, #PCLMIN, #DVICLK, #TESTMODE, #TCPMAXWIN
ISSUE# 20	2014-05-05	SW 10.01.xx0 16.01.xx0 SW 13.00.xx6	– Updated par 3.4 AT Commands Availability Table – Updated: #SIMDET, #GPPPCFG, #SLED, #DVI, #DVIEXT
ISSUE# 21	2014-12-18	SW 10.01.xx1 16.01.xx1 SW 13.00.xx7	– Updated par 3.4 AT Commands Availability Table – Renamed and repaginated “GNSS Commands set” section – Updated: #DIALMODE, #ECAM, #EMAILD, #ENAEVMONICFG, #GPPPCFG, #HTTPQRY, #HTTPSND, #NTP, #PLMNMODE, #SCFGEXT3, #SD, #SEMAIL, #SL, #SLEDSAV, #SMSATRUNCFG, #SMTPCFG, #SMTPCL, #SSLCFG, #SSLD, #SSLRECV, #SSLSEND, #SSLSENDEXT, #TCPATRUNCFG, #WSCRIPT, $FTPGETIFIX, $GPSACP, $GPSAT, $GPSCON, $GPSD, $GPSGPIO, $GPSIFIX, $GPSNMUN, $GPSP, $GPSPS, $GPSR, $GPSRST, $GPSSAV, $GPSSERSPEED, $GPSSTAGPS, $GPSSW, $GPSWK, $HTTPGETIFIX, $HTTPGETSTSEED, $INJECTSTSEED, +CFUN, +CPIN, #MMSSET, #PORTCFG, #MMSSET, #SIMDET, #IDLEPAGING, #BUZZERMODE, #GAUTH, #GPPPCFGEXT, #TESTMODE – New: #CMSFW, #ENAME, #NFM, #NFMC, #NFMS #OTAREG, #PLMNUPDATE, #SIEXT, #STSA, #TEMPCFG, $GNSSIFIX, $GPSSTAGPS, #IMCDEN, #ECONLY, #ADELA, #ADELF, #ALIST, #APLAY, #ARECD, #ARECV, #ASEND, #ASIZE, +TRACE, #E2RI, #HFVOL, #ECALL, #DWCFG, #DWCONN, #DWSTATUS, #DWSEND, #DWSENDR, #DWRCV, #DWRCVR, #DWLRCV, #DWEN, #EQUPDP
ISSUE# 22	2015-08-05	SW 10.01.xx2 16.01.xx2 SW 13.00.xx8	– Updated par 3.4 AT Commands Availability Table – Updated: #ECONLY, #EQUPDP, #HTTPQRY, #HTTPSND, #QSS, #SCFG, #SD, #SIMINCFG, #V24CFG, $DPATCH, $EPATCH, $FTPGETIFIX, $GPSD, $GPSGPIO, #STATSCONSUME, $GPSNMUM, $GPSR, $GPSSERSPEED, $GPSSW, $GPSWK, $HTTPGETIFIX, $LPATCH, +CFUN, +CSIM, #DWCFG, #GPIO

			– New: #ANAMICG, #DIGMICG, #DASCRIPT, #ECALLNWTMR, #ECALLTMR, #ECHOACT, #FASTSHDN, #MSDREAD, #SIDETG, #SPIOPEN, #SPICLOSE, #SPIRW, #AFIND, +CCHO, +CCHC, +CGLA, $GPSSTCPUCLK, $GPSMTKPPS, $GPSMTKSTDBY, $HTTPGETEPO, $INJECTEPO, $QUERYEPO, $CLEAREPO, $EASY – Updated par 3.3.1 Factory Profile And User Profiles
ISSUE# 23	2015-11-30	SW 10.01.xx2 16.01.xx2 SW 13.00.xx8	– Updated: #SPIOPEN, #SPICLOSE, +CHLD
ISSUE# 24	2016-09-07	SW 10.01.xx3 16.01.xx3 SW 13.00.xx9	– New: $GNSS5HZ, $GNSSEPE, #FTPGETF, #HTTPRCVF, $GPSMTKSETCOMPORT, #FASTCBC – Updated: #ANAMICG, #DIGMICG, #SS, #ECALLNWTMR, #ECHOACT, #JDRENH, #SIDETG, #SMTPCFG, #SSLEN, #DWCFG, #CAP, $GPSPS, #ENCALG, #DVI, #DWSEND
